Nous avons également reçu de nombreuses lettres et télégrammes de félicitations émanant du Ministère de la Marine Britannique.

El almirante SIMS dice:

"Me es grato citar para su gobierno la carta siguiente del contra almirante Hugh Rodman de la Armada de los Estados Unidos. 'Los trabajos ejecutados por la Cía. Smith's Dock Company, Ltd. [illegible] los acorazados bajo mi mando [illegible] estado satisfactorios en todos los conceptos, tanto á mi modo de ver como á los oficiales comandantes de los acorazados referidos. En cada caso el trabajo fué emprendido prontamente y completado eficiente y expeditamente.'"

También se han recibido muchos telegramas y cartas de estimación del Ministerio del Almirantazgo Británico.

SODA FOUNTAIN AND RESTAURANT FURNITURE

SANI-PRODUCTS

Sani-Onyx table tops are made by melting crushed Onyx at a temperature of 2600 degrees Fahrenheit, they are absolutely impervious to water, liquids and even the strongest acids.

Sani-Metal is made of a combination of iron and porcelian enamel. It can be cleaned instantly with a damp cloth and has the radiantly white appearance suggestive of that fresh cleanliness so much desired in establishments serving food and drinks.

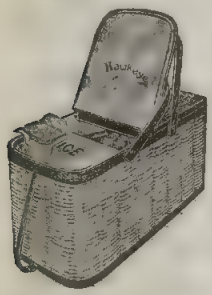
REFRIGERATOR BASKETS

HAWKEYE

Made in several sizes and are adapted to the home or sick room as well as for travelers' use.

Built like a first class refrigerator. The outside is imported reed, next to this there are several layers of the best insulating material. The inner lining is polished rust-proof metal, with removable ice compartment. The cover which is detachable, breaks on hinges in the center, allowing easy accessibility to either side of the basket. Inside of cover lined with zinc heavily nickel plated. Hardwood bottom covered with two coats of mineral paint. Two carrying handles and strap for holding the cover in position. The entire basket is finished in forest green. A small piece of ice keeps the contents cold for 24 hours.



HAWKEYE TONNEAU

This basket is light, neat, durable and shaped so that it can be placed under the robe rail in the tonneau of a car where it takes up little room and is within easy reach.

Highly polished, nickel plated zinc inner lining. Web straps for cover.

Each

No. T1—For party of five or six; 21 inches long, 10 inches wide, 12 inches deep; weight each 12 lbs..... $30 00

No. T2—For party of five to eight; 22 inches long, 10 inches wide, 11½ inches deep, weight each 14 lbs..... 36 00

No. T1 six in a crate; No. T2, 4 in a crate.

HAWKEYE REGULAR

This basket is very convenient for the fishing trip, as it will accommodate the lunch and tackle on the way out and the catch on the way back.

Polished metal inner lining guaranteed rust-proof. Webb strap for cover.

Each

No. R1—For party of two or three; 18 inches long, 12 inches wide, 8½ inches deep; weight each 8½ lbs..... $16 05

No. R2—For party of five or six; 20 inches long, 13 inches wide, 10 inches deep; weight each 10 lbs..... 24 00

Six in a crate.

HAWKEYE DE LUXE

This basket is made out of especially selected imported reed. Covers best quality 3-ply basswood. Lining nickel plated zinc with special insulator constructed of wool and asbestos between the lining and the body. Straps are of tanned leather with nickel plated lock buckles, hinges and all trimmings are nickel plated.

Each

No. D1—For party of two to five; 20 inches long, 12 inches wide; 10 inches deep..... $42 00

Wrapped in heavy paper; weight each 10 lbs.

AFRICAN WATER BAGS

Made of imported material especially treated, having the peculiar property of holding water and yet exuding enough moisture to prevent the sun from having any effect on the water inside the bag. These bags require no ice. Guaranteed to keep water cool for 48 hours.

Adapted to the needs of harvest and field hands, lumbermen, prospectors, surveyors, railroad men, boatmen, automobilists and every one who goes to the woods, desert or on the water, who wants a cooling drink of fresh water.

STANDARD STYLE

Double stitched, with galvanized metal mouth piece and cork stopper attached with linen cord. Has rope handle or sling.

Per Dozen

No. 1—1 gallon; weight per dozen 8¼ lbs..... $27 00
No. 2—2 gallons; weight per dozen 11 lbs..... 33 00
No. 3—3½ gallons, weight per dozen 12 lbs..... 49 50
No. 5—5 gallons; weight per dozen 18 lbs..... 63 00

Packed loose.

SANITARY STYLE

Open top, with slide to close.

Insures cleanliness and health. A bag that can be opened turned and cleaned inside as well as out. Has galvanized slide top, with a non-rustible fastening, which is easily removed for cleaning purposes. Bag is double stitched; has galvanized metal mouthpiece with cork stopper attached, with linen cord, and has long rope handle or sling.

Per Dozen

No. 11S—1 gallon; weight per dozen 12 lbs..... $31 50

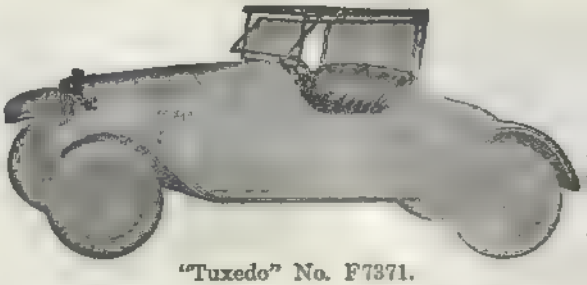
SPECIAL BODIES FOR FORD CARS

"Symphony" No. F7370.



"Tuxedo" No. F7371.

General Specifications:

Frame—Hardwood throughout, all joints properly made and securely fastened. Floor boards and dash furnished with all openings cut and wear plates furnished.
Body—22 gauge cold rolled body stock throughout.
Hood and Shell—22 gauge cold rolled body stock.
Top—Square type, collapsible, supported upon knock-down tubular frame; made of high grade pebbled finish top material; fitted with two-piece side curtains. Back of top and curtains equipped with square celluloid lights.
Windshield—Slanting, one-piece, ventilating type. Glass set in rubber in standard rolled frame.
Upholstery and Cushions—Manufactured leather pebbled or straight grain finish. French pleated and fully stuffed.
Cushion—Wood frame with oil tempered coil springs, fully stuffed and covered.
Painting—Primer, color and varnish coats. Stock colors red and brewster green. Hood and shell black baked enamel or same color as body at our option. Other colors extra and at a delay of three weeks in shipment.
Fittings—All bodies are fully equipped with necessary bolts and plates for attaching without alteration. All openings are cut in dash and floor. Floor and brake lever plates furnished. Fender irons standard equipment. Running board, dust-shield, fenders, and radiator not furnished. Bodies are built to fit any model T Ford Chassis.
IMPORTANT—In ordering, advise whether body is for old or new style radiator. Failure to do so means delay and expense.

COMMERCIAL FENDERS
FOR FORD CHASSIS

When a Ford car is converted into a commercial car, a pair of these fenders are necessary as the fenders which are furnished with the Ford chassis will not allow a body to be put on. The fenders here shown are made of heavy gauge steel with two coats of lustrous black enamel, baked on. They match the front fenders and are easily attached. Two in a set.

Commercial fenders adapted for one ton Ford trucks, for use with all truck units and Smith Form-A-Trucks, extra heavy steel, two irons and apron, very rigid and strong.

No. F7431

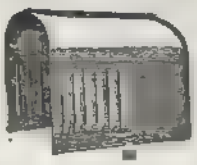
1 pair to a crate, w't 33 lbs.★ .....per pair $8.00
5 pair to a crate, w't 135 lbs.★ .....per pair 7.50

This Fender is designed to be used on Ford trucks, wherever a Ford has been remodeled into a delivery car. Easily installed. Finished in black enamel to match the front fenders furnished with Ford cars.

No. F7430

1 pair to a crate, w't 35 lbs.★ .....per pair $7.60
5 pair to a crate, w't 130 lbs.★ .....per pair 7.00

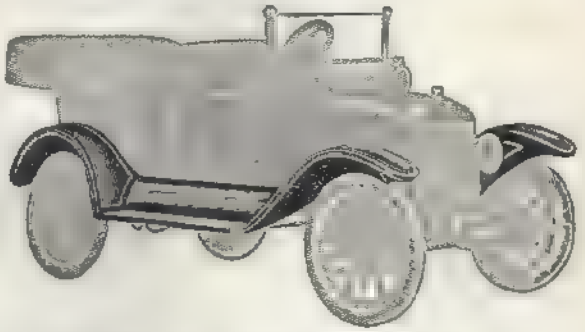
HOODS
—FOR FORD CARS—



Made of heavy gauge steel, finished with two coats of black enamel. Hood is of four-piece construction, hinged in center and on each side. This construction is in general use today and will last the life of the car. For all 1917 to 1921 Ford cars. Will change the appearance of a 1915-1916 Ford when used with our No. T7457 Radiator to that of a 1921 Model.

No. F7398—1721—1 pair to a carton, w't 22 lbs.,
each★ $6.70
No. F7399—5 pairs to a crate, w't 80 lbs.,
each★ 6.00

LAWCO INTERCHANGEABLE FENDERS



FOR 1917 TO 1921 FORD CARS

These Fenders are duplicates of the regular equipment on 1921 Ford cars and can be attached easily to all Models of 1917 and later. Made of the same gauge of material as used in the Ford Fender and finished with two (2) coats of high grade black enamel.

No. W7426—W't per set 85 lbs. .....per set $20.00

ONE SET IN A CRATE

RUNNING BOARD SHIELDS
LAWCO

The Shields are made to fit Ford cars manufactured from 1917 to 1921. Exact duplicates as furnished on 1921 cars, manufactured of heavy gauge steel finished in two coats of black enamel. These shields will fit all Model T Fords, 1911 to 1921 if our No. W7426 Fenders are used in connection with them on 1911 to 1917 Models.

No. W7427—1 pair to a crate, w't 31 lbs.,
per pair $6.70
No. F7428—5 pairs to a crate, w't 105 lbs.,
per pair★ $3.00

SHIPPING FACILITIES

With our immense stock and very modern facilities for shipments we are enabled to fill orders with unequaled promptness. On some of the roads we have special through cars which enable us to reach distant points 24 hours ahead of shipments made in the regular way.

SPLITDORF SPARK PLUGS

The Plug with the Green Jacket

Made in a variety of types—in standard sizes and of special dimensions to suit engines of every make—the keynote of the highest quality is sounded in the whole line of Splitdorf Plugs. They are as nearly soot-proof, leak-proof and unbreakable as human ingenuity can make them.

Splitdorf Plugs were originally designed for the hardest kind of usage, and how well they have "stood up" to the terrific tests of speed and endurance in years of service in every make of internal combustion engine and in all quarters of the globe is testified to in the general demand for increasing millions of Green Jacket Spark Plugs.

Each $1.25

BETHLEHEM SPARK PLUGS

These plugs are constructed of the highest quality raw materials obtainable. All electrodes contain 98 per cent nickel. Porcelain cores on authoritative tests have exhibited three times the insulating strength and nine times greater tensile strength than other porcelains. Only India Ruby Mica is used. Steel parts are constructed of cold drawn bars. Each one is carefully heat treated and tested for tensile strength. The result of this superior workmanship is a perfect spark plug, combined with a rigid policy of trade protection. These are the points that make Bethlehem Spark Plugs a most profitable line for the dealer.

Single point plugs are absolutely gas tight and will stand up under the most severe conditions. Extra porcelain cores can be supplied for any type porcelain plug.

Two-Piece Construction

May be easily taken apart, cleaned with gasoline and reassembled.

Special for Ford Cars

½ inch, special for Ford cars, 11/16 hex. petticoat insulator, extra heavy porcelain for overcoming oil condition. Special mixture steel alloy used for electrodes for best conduction and resistance against heat.

No. 1.....each, $0.75

Special for Buick, Chandler, Etc.

⅞-18 with 1 in. hex. standard equipment on International Trucks, Weidley Motors, Cleveland Tractors, Sanford Trucks, Wichita Trucks, Dixie Flyer, Armleder Trucks and others.

Lengths 5½, 6½ and 8½ ft, w't per dozen 5½ lbs. .....per dozen $28.00

SPECIAL CASTING ROD

No. 597—Union Hardware Company's, three joints and butt, enameled in green, cork grip, reel seat above handle, casting two-ring German silver guides, three-ring top; in cloth bag, one joint in a partition; lengths 4½, 5 and 5½ ft., w't per doz. 5½ lbs.,
per dozen $28.00

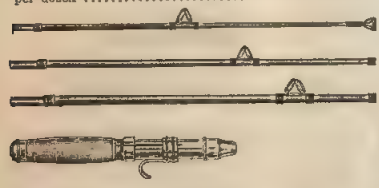
RICHARDSON'S STEEL FISHING RODS

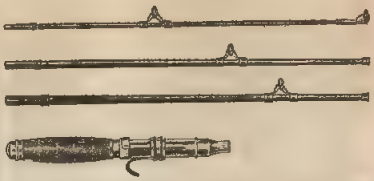
No. 700—8-piece, cork grip handle, reel seat above hand with reel lock, handle fitting heavily nickeled on brass, mounted with one nickel silver snake guide on each joint, nickel silver three-rng offset tip, enameled in black, 6½, 7½, 8½ and 9 ft., in a partitioned cloth bag, per dozen $43.20

No. 720—8-piece, cork grip handle, reel seat below hand with reel lock, handle fittings heavily nickeled on brass, mounted with one nickel silver snake guide on each joint, nickel silver three-ring offset tip, enameled in black, length 8 to 9 ft., in a partitioned cloth bag, per dozen $43.20



No. 600—3-piece, genuine ring-cork grip on handle, nickel fittings, enameled black, two-ring guides with three-ring tips, length 4½ to 5½ ft., in a cloth bag, per dozen $43.20

No. 220—8-piece, cork grip handle, reel seat below the hand, fittings heavily nickeled on brass, enameled in black, mounted with nickel silver snake guides, two guides on first joint and three guides on second and tip joints, nickel silver one-ring offset fly tip, length 8 to 9 joints, nickel silver one-ring offset fly tip, length 8 to 9 ft., in a flannel bag .....per dozen $79.90



3-piece, cork grip handle, reel seat above the hand, with reel lock and finger hook, handle fitting heavily nickeled on brass, enameled in black, lengths 4½ to 5½ ft., in a partitioned cloth bag.

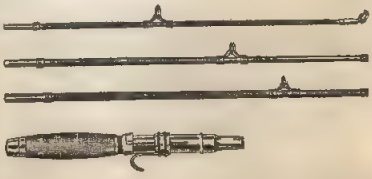
No. 780—Mounted with nickel silver ring casting guides set in nickel silver mountings, nickel silver offset tip to match .....per dozen $48.00

No. 752—Mounted with **crystal agate guide** on first joint and **crystal agate offset tip,** two nickel silver casting guides intermediate .....per dozen $56.00

No. 752A—Mounted with **genuine agate guide** on first joint, and **genuine agate offset tip,** two nickel silver casting guides intermediate .....per dozen $72.00

No. 754—Mounted with crystal agate guides on all joints, with crystal agate offset tip, mountings of nickel silver, matched in design, are used for agate guides and tips, per dozen $84.00

No. 754A—Mounted with genuine agate guides throughout, per dozen $96.00



3-piece, cork grip handle, reel seat above the hand with reel lock and finger hook, handle fittings heavily nickeled on brass, enameled in black, tip and second joints are reinforced.

No. 252—Mounted with crystal agate guide on first joint and crystal agate offset tip, two large nickel silver ring casting guides intermediate, length 4½ to 5½ ft., per dozen $88.00

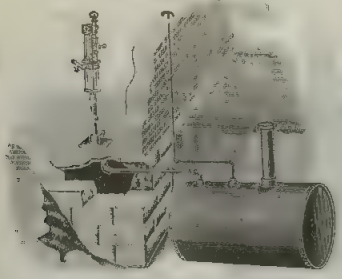
No. 252A—Mounted with genuine agate guide on first joint and genuine agate offset tip, two large nickel silver ring casting guides intermediate, length 4½ to 5½ ft., per dozen $111.80

No. 254—Mounted with crystal guides on all joints, with crystal agate offset tip, length 4½ to 5½ ft., per dozen $96.00

No. 254A—Mounted with genuine agate guides on all joints, and with genuine agate offset tip, special mountings of nickel silver, matched in design, are used for the agate guides and tips, making very attractive rods, length 4½ to 5½ ft. .....per dozen $135.80

LUBRICATING OIL OUTFITS

WESTERN SELF MEASURING, UNDERGROUND STORAGE SYSTEM



This outfit is designed to fill the demand for underground storage of lubricating oils. The tanks are built of either 14 or 16 gauge galvanized steel, welded throughout, fitted with brass foot valves, double fill pipes with lock cap and measuring stick. Pump is adjusted to measure quarts, pints or half-pints at a stroke and fitted with locking device and positive anti-drip nozzle.

Outfit with 14 Gauge Tank.

VISIBLE FILLING GASOLINE STATIONS

SPRINGFIELD PERFECT

The Only Double Visible Filling Station Bearing Underwriters' Approval.

Cheat Proof and Fool Proof. No Waiting—One Cylinder Fills as the other Empties.

Power operated and entirely automatic in all its features, simply turn a valve, letting gasoline into car, as gasoline is always ready.

Motor has regulator attached, stopping and starting automatically. Station is self-filling and measuring, self-draining when closed and cannot flood.

Valve shows no leaks under high pressure test.

There is no pressure in glass cylinders and it is **impossible for pressure to accumulate from any cause** in any part of the station.

This station, once set and sealed, will give the same exact measure indefinitely.

Represents the highest attainment in filling stations, having no equal, in steady, perfect, rapid operation, correctness of measure and freedom from leaks.

Equipment Consists of:

1—Complete Springfield filling station with light globe (no wiring) and 10 feet listed gasoline hose with nozzle.

1—Combination vacuum pump, operated by direct connected enclosed motor.

1—Special 3 inch storage tank plug.

1—Vacuum regulator. Approved type. Standard motor used is ¼ horse power, 110 volt, 60 cycle, single phase, A. C. with a speed of 1800 R. P. M.

No storage tank is included in price given below.

	Each
No. A-EVFS—Handles 300 gallons of gasoline per hour ✣	✣$1425 00

Crated; shipping weight each 550 lbs.

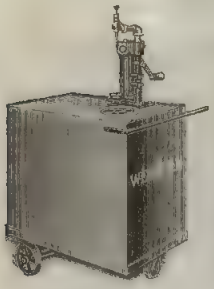
PORTABLE LUBRICATING OIL TANKS

WESTERN



Single Unit.

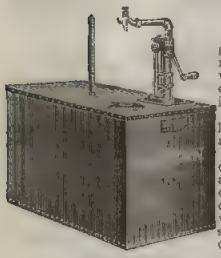
Tank is built of 14 gauge steel, all joints being welded, making a seamless tank that will withstand the strain and hard usage a tank of this kind is subjected to. Mounted on a welded angle iron frame, fitted with two 6 inch wheels and one 4 inch wheel with ball bearing swivel joint. Tank is fitted with metal stick gauge calibrated for each gallon of tank capacity and with 6 inch drip pan. Pump is adjusted to measure quarts, pints or half pints at a stroke. Fitted with positive anti-drip nozzle and with locking device.

Each

No. A-66—Capacity 60 gallons.. ..... ✤$229 50

One in a crate; shipping weight each 185 lbs.

WESTERN



Single Unit.

Tank built of 14 gauge galvanized steel, finished in rich dark olive green enamel with pump finished in black enamel with nickel trimmings.

Pumps are fitted with locking device and positive anti-drip nozzles.

The tank is fitted with drip-pan that has strainer and cast iron spider. The drip-pan is protected from dust and dirt by a cast swivel cover. The indicator shows at a glance how much oil is in the tank.

Fitted With Quart Stroke Pump.

Adjusted to measure quarts, pints or half pints.

Nos.	Capacity Barrels	Capacity Gallons	Weight Lbs.	Each
A-561-¼	1	65	160	✤$162 00

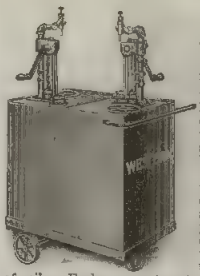
One in a crate.

✤F. O. B. Missouri Factory Only.

LUBRICATING OIL TANKS

WESTERN



Double Unit.

A double tank for two grades of oil.

Built of 14 gauge steel, all joints welded. The division wall being first riveted, then welded, making a break or leakage impossible. Mounted on a welded angle iron frame, fitted with two 6 inch wheels and one 4 inch wheel with ball-bearing swivel joint.

Both compartments are fitted with heavy galvanized cast iron drip pans fitted with strainer and cast iron spider, a ¾ inch pipe is screwed into bottom of drip pan and extends down within 1 inch of bottom of tank, preventing any waste of oil. Each compartment is fitted with metal stick gauge covered by polished brass screw cap. Pumps are adjusted to measure quarts, pints or half pints at a stroke. Fitted with positive anti-drip nozzle and with locking device.

Each

No. A-67—Capacity of each compartment 30 gallons ✤$432.00

One in a crate; shipping weight each 220 lbs.

BARREL PUMPS

MILWAUKEE, SELF-MEASURING

For Lubricating Oil or Kerosene Only.

Provides an inexpensive means of converting any ordinary steel barrel into a self-measuring outfit for retailing oils or kerosene.

Measuring stops are adjustable, and may be sealed by any inspector of measures, by means of a wire and lead seal. Provided with a spring lock, which by simple pressing the casting, it engages automatically.

Non-drip faucet prevents oil dripping out of the discharge pipe, after pumping ceases. Flange bushing has two sizes of threads on it, for screwing into 1½ in.; or 2 in.; threaded openings in any shipping barrel or drum. Thus it will fit any ordinary steel barrel. The suction pipe of the pump is inserted through the hole in the center of the bushing, as far as it will go into the barrel. Two thumb screws hold it firmly in position.

Each

No. A-11BP—Measure accurately a quart, pint or half-pint.....$63 45

Packed loose; weight each 25 lbs.

✤F. O. B. Missouri Factory Only.

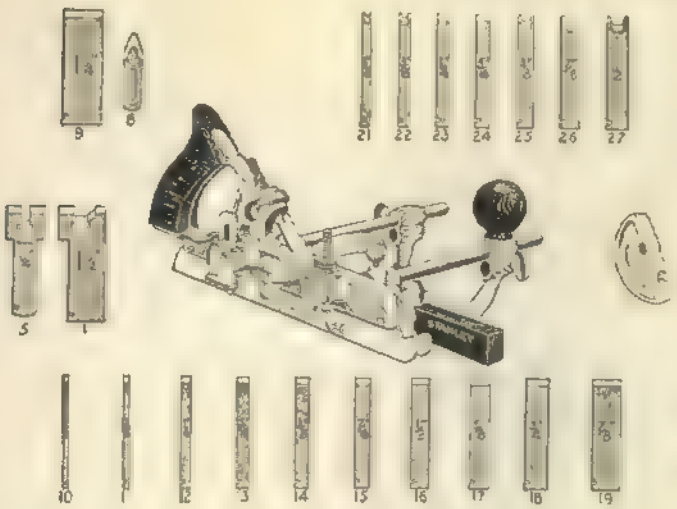
STANLEY "FORTY-FIVE" PLANES



Seven tools in one, in compact and practical form. 1. Beading and center beading plane. 2. Plow. 3. Dado. 4. Rabbet and fillister. 5. Match plane. 6. Sash plane. 7. Slitting plane.

The plane has two principal parts, a main stock and a sliding section. The main stock carries the handle, cutter adjustment, a slitting tool, depth gauge, and forms a bearing for one edge of the cutter. The sliding section slides on two arms secured in the stock and has a bearing for the other edge, allowing cutters of different widths to be used. A fence also slides on these arms for use when working as a plow, beader or fillister, to gauge the distance from the cutter to the edge of the board and to keep the cutter at right angles to same. When used as a fillister, the fence slides under the bottom of the plane and determines the width of cutter exposed to the work.

The plane is fitted with spurs for use across the grain, etc., and can be used either right or left hand.

With each plane are furnished twenty-one cutters, all of which are shown in the cut. The cutters, together with the plane, are packed in a neat steel box.

All metal parts are nickel plated. The handle, knob and fence are made of selected rosewood.

For beading at a distance from the edge of a board, attach cam rest (see cut at right of plane) to the front arm, between the sliding section and fence, to prevent the fence sagging. In certain work attach same to the rear arm, to prevent the plane from rocking.

No. 45. Nickel plated, with 22 cutters, complete weight 9½ lb. ..... each, **$30.00**

The following cutters are furnished with each plane. The list price is given in case duplicates should be required.

No.	Size	Style	Each
1	1⅛ in	Sash tool	$1.00

SPECIAL BOTTOMS FOR "FORTY-FIVE" PLANE

In order to work hollows and rounds, or a nosing cutter in the No. 45 plane, it is necessary to substitute, for the sliding section, specially formed bottoms, which are called by the same name as the cutters they are designed to carry; that is: Hollows, rounds or nosing tools.

A hollow and its cutters will form a round on the moulding being worked. A round and its cutters will form a hollow. A nosing tool and its cutters will form what might be called an exaggerated round. It is very largely used for shaping the edges of stair treads. Hollows and rounds are made in four sizes and are usually sold in sets, a set comprising one hollow, one round and two cutters. The price of a nosing tool includes one cutter.

No. 6. Hollow and round, ½ in. cutters, work ¾ in. circle ..... per pair, **$2.80**

No. 8. Hollow and round, ⅝ in. cutters, work 1 in. circle ..... per pair, **2.80**

No. 10. Hollow and round, ¾ in. cutters, work 1¼ in. circle ..... per pair, **3.00**

No. 12. Hollow and round, 1 in. cutters, work 1½ in circle ..... per pair, **3.00**

No. 5. Nosing tool, 1¼ in. cutters, work 1¼ in. circle ..... each, **2.00**

STANLEY IRON PLANES

SKEW CUTTER COMBINATION

For plow, dado, fillister, matching and rabbet work; nickel plated, iron stock, rosewood handle and fence.

Skew cutters are the feature of this plane. It consists of a main stock carrying a spur, a depth gauge and a slitting cutter, a sliding section carrying a spur and forming an extra sole for the plane, and a fence (rosewood face) which can be set for either plow or fillister work.

No. 46. With rosewood fence and 12 cutters, one each plow and dado bits ⅛, ¼, ⅜, ⅜, ½, ⅝, ¾, ⅞ and 1¼ in.; fillister, 1⅜ in.; tonguing, ¼ in, and slitting cutter; length 10½ in., weight 5¾ lb.....each, **$23.50**

No. 47. Without rosewood fence; 7 cutters, one each dado, ⅜, ½, ⅝, ¾, ⅞ and 1¼, and slitting cutter; length 10½ in., weight 3¾ lb.....each, **18.50**

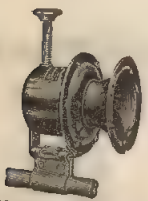
STEWART HAND-OPERATED WARNING SIGNALS

One push of plunger creates 192 distinct sound impulses—more than any other signal. This, together with its exclusive, large-sized vibratone steel diaphragm, accounts for the Stewart's wonderfully effective warning. No matter how installed, signal can always be pointed straight ahead.

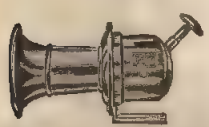
No. T6034—114—Double-supporting adjustable bracket and is self-lubricating. Finished in black enamel, w't each 5 lbs. .....each $6.68

ONE IN A BOX



No. T6038—115—Finished in black enamel with nickel plated bell, complete with brackets, w't each 4 lbs. .....each $6.68

ONE IN A BOX



This model is efficient in results. The push rod is set at a forty-five-degree angle, making possible a simplification of interior mechanism. One stroke of the plunger creates 84 sound impulses. It has a vibratone steel diaphragm.

No. T6036—151B—Black enamel finish, complete with bracket, w't each 3¼ lbs. .....each $4.68

ONE IN A CASE

STEWART MOTOR-DRIVEN WARNING SIGNALS

A slight pressure on the large push button sends out a flood of commanding sound waves.

It is economical in current consumption. Brushes are large, rear bearing provided with ball thrust, shaft can never get out alignment, felt-packed oil well gives perfect lubrication.

Has one-piece, seamless projector and back-cover. No solder, parts are riveted and bolted. Finished in hard-baked black enamel. Variety of brackets to fit any car. Outfit includes bracket, push button, terminals and five feet of double-strand electric cord, w't each 7 lbs.

No. F6039—136E—**For Underhood installation★** .....each $11.34

No. F6040—136C—**For Outside installation★** .....each $11.34

ONE IN A BOX

Specify Make, Year and Model of Car When Ordering.

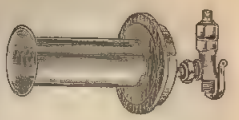
Motor is Stewart-built and embodies a new, improved design of magnetic circuit. Armature is large, gives greater power with less current, diaphragm is made of high grade tempered steel.

This new model is slightly smaller than the DeLuxe Stewart Motor-Driven Signal, No. T Model 136, being two and one-half in. shorter in length and having a diaphragm half a inch less in diameter.

No. F6041—163D—For Underhood installation, complete with bracket, push button, terminals and five feet of electric cord, w't each 3 lbs., each★ $8.50

ONE IN A BOX

BUELL TURBO HORNS



FOR ALL PASSENGER CARS AND MOTOR TRUCKS

The Buell Turbo Horn is made of aluminum and is a distinctive new type of warning signal utilizing the explosion pressure through priming-cup opening in cylinder head, using the same valve mechanism as the Buell Explosion Whistles.

The high pressure gas of the explosion is used to operate a small turbine which carries a cam engaging a diaphragm, as used in the motor-driven electric horn, the Buell Turbo Horn takes its mechanical power direct from the explosion of the cylinder instead of the devious circuit through engine, generator, battery and electric motor, each with its considerable loss of efficiency in transmission of power.

There is but one moving part in the Buell Horn, making it a signal with the maximum certainty of operation.

Comes complete with valves, steering wheel lever and enclosed wire control, 4½×7 in. over all.

(Less Spark Plug) When Spark Plug is wanted order our No. 6072-½ in.

No. 6073—½ in. pipe thread, w't each 2 lbs.....each $11.70

FLORENCE
OIL COOK STOVES

National Demonstration Week
Make it your biggest of the year

THOUSANDS of dealers all over the country will have actual cooking demonstrations in their stores during Florence National Demonstration Week, from April 17 to 22. They will use the Florence Oil Cook Stove and the Florence Oven.

Are you going to take part in this National Demonstration Week? Those in your locality will expect you to participate.

Increased sales during the entire year will result from your demonstration We are ready to co-operate fully with you by sending announcement cards for your customers, dealer selling helps, newspaper electrotypes, lantern slides and other advertising material.

If you have not joined the Florence Family, ask for a registration blank at once. It is not too late.

Get women into your store, and the Florence Oil Cook Stove and the Florence Oven will do the rest. Besides, they will act as selling agents for your other merchandise.

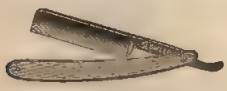
HIGHEST QUALITY IMPORTED BARBERS' RAZORS



S. R. DROSCHER'S FAMOUS "SWEEP" RAZORS are unequalled in quality, finish and workmanship, and are guaranteed to give entire satisfaction.

They are made of the best quality English steel and are twice hand forged to prevent overheating.

Ground by hand by expert grinders after the old approved system. The blades thus remain perfectly cool and retain the original quality of the steel, which is an impossible achievement in machine-ground razors. Every razor is tested and set ready for use. Unequalled for private as well as barbers' use.

No. 206—⅛ in. blade, square point, full hollow ground, white ivoride handle .....per dozen **$42.00**

No. 206—⅜ in. blade, square point, full hollow ground, white ivoride handle ..... per dozen **$42.00**

ONE IN A TELESCOPE BOX, HALF DOZEN IN A BOX

Made from the famous "Karbona Special Steel" ground by hand by expert grinders after the old approved system. The blades thus remain cool and retain the original quality of the steel, which is an impossible achievement in machine ground razors. Every razor is tested and set ready for use. Fully warranted—unequalled for private as well as barbers' use.

No. 190—⅜ in. blade, square point, full hollow ground, white ivoride handle .....per dozen **$42.00**

NEW IMPROVED GILLETTE SAFETY RAZORS

(Patented Jan. 13, 1910)

Here is an invention of intense interest to every man who shaves, a unique principle in Razor—not merely a new style.

As a result of the new patented features, the NEW IMPROVED Gillette Safety Razor is the finest shaving instrument ever produced. It uses the well known Standard Gillette Blades and greatly increases their effectiveness. The **Fulcrum Shoulder** and overhanging Cap provide straight edges acting on the blades to produce an **Adjustable Short Fluxure**, which results in a straight and extremely rigid shaving edge in all positions of adjustment. The **Channeled Guard** underlying the adjustable blade edge enables the adjustment to be changed without sensibly altering the angle at which the razor is held in shaving, and also leaves the entire edge free to the beard while guarded from the face.

All parts are made with **Micrometric Precision** in strict conformity with measurements determined by Gillette technical experts after exhaustive research and thousands of shaving tests.

The distinctive **Diamond Knurling** is used exclusively on the New Improved Gillette Safety Razor.

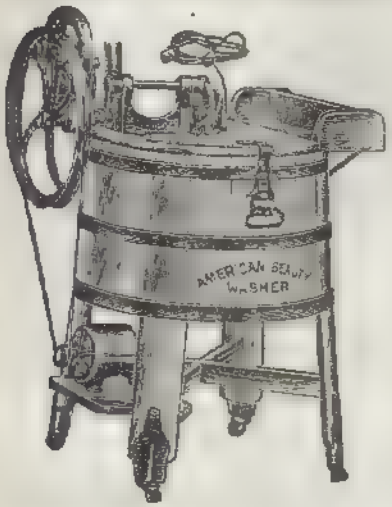
ELECTRIC WASHING MACHINES



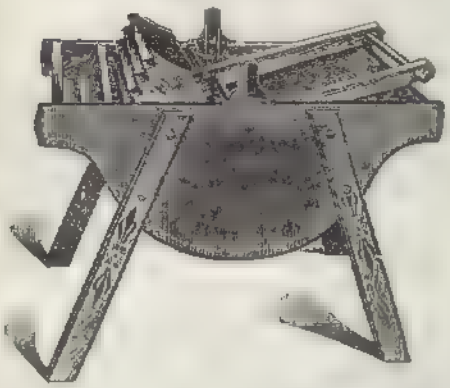
THE AMERICAN BEAUTY

Furnished with ½ H. P. Standard motor 110 volt, either alternating or direct current. Cypress tub corrugated throughout. Geared to give the dolly 85 full ⅔ turns per minute. Ball bearing casters and 10 ft. cord with separable attachment plug, brass drain faucet.

With each machine an emergency lever is furnished, with which to operate it in an easy way if power for the moment is not available.

No. F17 — Without wringer, w't crated 125 lbs.★ .....each $67.50

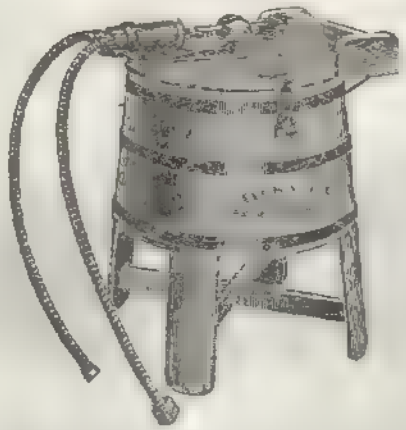
HAND POWER WASHING MACHINES



ADVANCE, kiln dried Arkansas cottonwood, height 24 in., length 33 in., width 21 in., galvanized iron bottom, with removable hardwood corrugated slats, hardwood cylinder and handle, galvanized iron socket guides, four hardwood bolted legs, w't per doz. 480 lbs.

No. W16—From stock, each $9.90

PEERLESS WATER POWER WASHERS



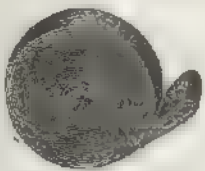
The pressure in the motor is concentrated so perfectly alternately on each side of the piston head that it only takes a minimum of pressure to produce more strokes per minute than any other water motor, and the "Peerless" water power machine is guaranteed to operate successfully on 20 lbs. pressure.

No. W30—This is very substantial, of thoroughly kiln dried clear southern cypress, rack is fully covered with a shield, shipping w't 900 lbs., each $32.00

TUB STANDS

No. W3132—For Nos. W31 and W32 Washers, height 18 in., diameter of top 16 in., steel electrically welded, shipping w't per set of two 25 lbs., per set of two $6.00

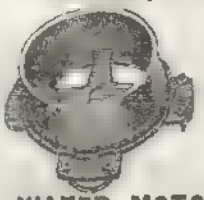
WATER MOTOR BELTS



One of these endless belts should be purchased with each water motor, as the regular rubber and leather belts are too heavy and use too much power.

No. 25—9 ft., endless belt for No. 1994 water motors, 1 in. wide, made of rubber and cloth webbing, each $0.80

REVONOC POWER PULLEY



REVONOC **Pulley,** 8 in., w't per doz. 42 lbs., per doz. $24.00

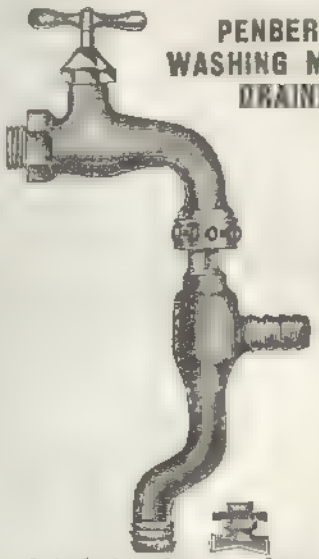
WATER MOTORS AND BRACKETS

Cut shows motor and bracket attached. Sold separately.

No. 1994—Motor 2 in flat belt double **flanged pulley,** made of brass, iron and steel, for ¾ in. pipe, w't per doz. 160 lbs., each $11.00

No. 1944—Wall or bench **brackets,** w't per doz. 17 lbs.....each $9.60

PENBERTHY WASHING MACHINE DRAINER



It is designed to transfer water from washing machines, wash tubs, cellar tubs, or any place where there is an accumulation, by means of ordinary water pressure. No electrical, steam or other operative power required.

No. 10—Aluminum, w't 5 ounces, w't per dozen 4 lbs. .....each $4.20
ONE DOZEN IN A BOX

WASHING MACHINE DRAINER ADAPTERS

Adapters can be supplied for use where the faucet is not threaded. Simply slip this over the smooth faucet, screw on the coupling and a tight connection is made.

No. 5—Brass, w't per doz. 2 lbs., each $0.70
ONE DOZEN IN A BOX

★ Items Marked Thus ★ Are Shipped From Factory Only.

GUARANTEED BALL BEARING WRINGERS

On this and the following page we illustrate several patterns of Wringers, under the brands [illegible] and REVONOC. The rolls in [illegible] wringers are guaranteed for five years, those in the REVONOC are guaranteed for three years, otherwise they are identical.

These wringers embody two very important improvements, namely, the "Enclosed Cog Wheels" and "Ball Bearings," but in connection with these are a number of other points which contribute to their superiority.

Frame—This is made of seasoned hard wood, in the simplest manner, carefully joined and bolted, all of the working parts encased leaving nothing to be desired in the appearance and convenience of the wringer. It is carefully varnished, painted, and well finished in every detail.

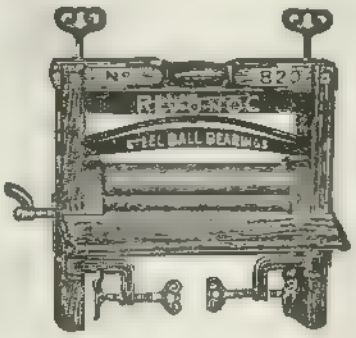
Rolls—These are of exceptional quality and will last the term of years for which they are guaranteed, if used for family washing. The [illegible] are made from the best solid white rubber, the same quality from outside of cover to shaft, are soft and have the proper elasticity to do good wringing. The rolls of the REVONOC are second only to the [illegible].

Covered Gearing—This is a very important improvement—there is no danger of clothing catching in the cogs. The appearance is vastly improved. The spring is longer, removing the strain on the rollers when rolls are separated, and the danger of children getting their fingers crushed is entirely removed.

Ball Bearing—These are located on the outside of the cog wheels, and therefore removed a considerable distance from the rolls, so that no water can reach them from wringing of clothes. The ball race is so constructed that should any water reach the bearings, it will drain out immediately, avoiding rust. The bearings can be oiled without any danger of the oil reaching the rolls. The balls are solid steel of uniform size. The bearings are of large size and reduce friction to a minimum, and [illegible] or REVONOC wringers can be operated with one half the effort of an ordinary wringer.

Other Points—Everything about these wringers is high grade and made for use. The thumb screws are large and easy to handle. The spring is made of the best quality of steel, adapted for the purpose. The clamps are extra strong and easy to apply, and are made to be attached to wood or galvanized tubs, either round or square.

[illegible]



See general description above.

Rolls warranted for three years, encased cog wheels with ball bearings, large frame, folding apron, adjustable clamps, for either wood or galvanized tubs.

10x1¾ in. Finest Quality Rolls, Upper No. 54, Lower No. 55, W't Per Dozen 275 Lbs.

No. R820 REVONOC—Full quarter dozen cases, per dozen $108.60

No. 820 REVONOC—Less than case lots, per dozen $108.60

11x1¾ in. Finest Quality Rolls, Upper No. 61, Lower No. 62, W't Per Dozen 290 Lbs.

No. R821 REVONOC—Full quarter dozen cases, per dozen $115.60

No. 821 REVONOC—Less than case lots, per dozen $116.60

1000 Shots for One Cent

The Gun that Shoots and *FLASHES* when you Pull the Trigger

That is why sales started at 100,000 a week and have been growing by leaps and bounds

Every pull of the trigger causes a big red flash to jump from the muzzle. And these flashes are absolutely harmless—the Ronson Repeater can be shot anywhere at anything in perfect safety. It complies with the laws of every State.

The National Toy

Boys not only hear it shoot but they SEE it shoot. That is why the Ronson Repeater is the most popular toy pistol ever offered.
The Ronson Repeater looks like a real automatic. It has the same feel and grip, the same gun metal finish. Comes loaded for 5,000 shots. Shoots automatically. Feeds automatically.

Watch for the Advertising

Sales of the Ronson Repeater started at 100,000 a week and have been growing steadily without one line of advertising. Figure for yourself what they will jump to when the big national campaign starts. This campaign is headed by full page space in The Saturday Evening Post and includes a long list of boys' publications.
Get some Ronson Repeaters on your counters now. Every boy and girl wants one. Every boy will be asking for the Ronson Repeater as soon as the advertising begins. Don't miss sales. Write us at once and let us give you complete information about this wonderfully fast-selling pistol. A 25 cent retailer; higher in the West. Start a letter our way today.

Ronson Redskin RELOADS

Nothing but the genuine Ronson Redskin Reloads will make the big flash in the Ronson Repeater. And they mean additional sales and profits for you when the boys learn they can get 1,000 shots for one cent.
The Ronson Repeater and Ronson Redskin Reloads are fully protected in U. S. A. and abroad under Letters Patent issued: Nov. 27, 1906; Aug. 2, 1910; July 23, 1918; Dec. 31, 1918; Nov. 8, 1921, and other patents issued and pending.

TINKER TOYS

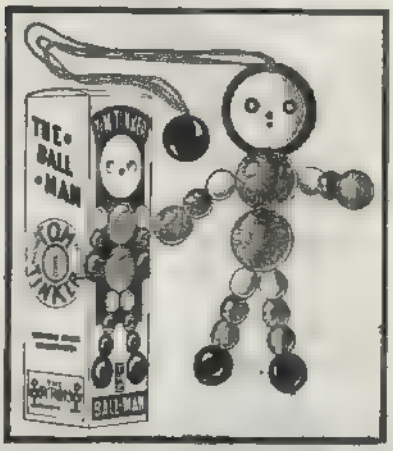
TOM TINKER



There is a period in a baby's life between the rattle and a real doll that has not, up to this time been fully met by those engaged in the business of making play, but now comes Tom Tinker the Ball Man, whom you will agree is just the one to brighten this important period. He consents to being thrown or dragged around and treated ever so roughly without a murmur of complaint. He has no sharp corners to bruise or injure little hands, just nice, smooth, wooden balls strung on four strong cords, which extend to a handle ball about a foot above his head. His many colors are made from harmless dyes that do not lick off. A most lovable companion for any child. Of course Tom can be dressed up in any style.

No. 25—W't per doz. 4½ lbs. .....per dozen *$7.80*

ENCLOSED IN A VERY ATTRACTIVE BOX. PACKED ONE DOZEN IN A FIBRE CASE

BELLE TINKER

Fortunate in her given name, Miss Belle Tinker lives up to its highest meaning. All little boys and girls are just as fond of her as they can be, not alone because she is Tom's twin sister, but on account of her charming personality, beauty of form and face and her lovely disposition. Never out of sorts, always gracious and ever ready to amuse and entertain; her colorings are all her own and will not shed and as she is made of wood no harm can possibly come to her.

No. 30—W't per doz. 4½ lbs. .....per dozen *$7.20*

ONE IN A BOX; ONE DOZEN IN A CARTON

RATTLEBOX TINKER

Simple pull toy for a young walking baby. Noisy enough to interest but not disturb. The possible sales for this item are large. Inexpensive.

Weight, pounds	12	30

Torrington VACUUM CLEANER

NEW TYPE "C"

KNOWN from one end of the country to the other—widely advertised in magazines of national distribution. A valued housekeeping help in tens of thousands of American homes.

There are many vacuum cleaners on the market not nearly so good as "Torrington" that are being retailed for more than you will charge for "Torrington." But there isn't a machine on the market that is better in construction and performance than "Torrington."

It has the most powerful suction of any machine made because all of the electric power is in the suction. Cleans thoroughly without creating any dust.

BRUSH—3 rows of all bristle tufts 13-16 in. long, which revolves as a carpet sweeper brush.

MOTOR—Air-cooled and mounted on phosphorus bronze bearings, insuring good service and long life.

POWERFUL SUCTION—Created by a fan, balanced almost as perfectly as the wheels of a watch. Removes all deep rooted dirt as well as surface dirt.

DUST BAG—A quarter turn detaches it and no trouble is experienced when emptying the dirt.

NOZZLE—13 in. wide, made of die cast aluminum alloy. Can be adjusted for light and heavy rugs.

NOZZLE EXTENSION—Permits cleaning close to the walls while the shape of the machine allows cleaning under low furniture.

WHEEL BEARINGS—Situated outside the suction nozzle, eliminating the possibility of threads, lint, etc. being entangled.

WHEELS—Ball-bearing which makes handling of cleaner easy.

SWITCH—Conveniently located at the end of handle.

CORD—25 ft. of heavily insulated cord and plug.

1H6278—With 110 volt single phase motor, direct or alternating current. 1 in case, 12 lbs. Each, **$38.75**

On lots of 6 or more "Torrington" Vacuum Cleaners we will allow actual freight charges up to a maximum of $1.50 per 100 lbs.

Lots of 3, Each, **38.25**

Lots of 12, Each, **36.75**

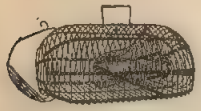
TRAPS

WIRE

MOUSE

No. 305—Midget, mouse, 5 in. diam., 3 in. high, 19 gauge coppered wire, six sheet steel coppered ribs, lacquered with patent rust proof lacquer, w't per doz. 3 lbs., per dozen $2.50

ONE DOZEN IN A PACKAGE



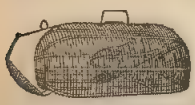
Coppered iron wire, flat steel ribs, lacquered to prevent rust, self-closing trap door.

REVONOC MOUSE

No. 408—9x5x5 in., w't per doz. 6 lbs., per dozen $9.60

HALF DOZEN IN A BUNDLE

REVONOC COMBINATION WIRE



Coppered iron wire, flat steel ribs, patent flange, safety door.

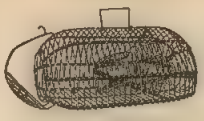
These traps are designed to catch and hold both rats and mice. Mesh wires are spaced ½ inch apart, and so locked that they cannot be forced apart. Patent flange around the opening makes it impossible for the rodent to pull down the trap door and escape.

REVONOC—16x8½x6¾ in., No. 18 wire nine flanged steel ribs, w't per doz. 32 lbs.

No. NN416—Full half dozen crate, per dozen $30.00

No. N416—Less than crate, per dozen $30.00

HALF DOZEN IN A CRATE



RAT

No. N315—Coppered iron wire, flat steel ribs, lacquered to prevent rust, self-closing trap door, 15x8½x6¾ in., w't per doz. 25 lbs., per dozen $14.40

HALF DOZEN IN A CRATE

REVONOC RAT

15x8½x6¾ in., w't per doz. 25 lbs.

No. N415—Full half dozen crate, per dozen $16.80

WE DO NOT BREAK CRATES

23x13½x7 in., w't per doz. 70 lbs.

No. NN422—Full sixth dozen bundle, per dozen $27.60

No. N 422—Less than bundle, per dozen $27.60

Coppered iron wire, sheet steel ribs self-closing tin trap door with flanged edge.

The lace wires are rigidly held in place by the heavy flanged sheet steel ribs and the trap is almost indestructible. There is a patent flange around the opening of the trap door, which prevents a rat from pulling it down after getting inside. Each trap is thoroughly lacquered to prevent rust.

REVONOC—RAT, 17x9½x7 in., No. 17 wire 9 flanged steel ribs, w't per doz. 34 lbs.

No. NN417—Full half dozen crate, per dozen $19.20

REVONOC—RAT, 19x10½x8 in., No. 16 wire, 11 flanged steel ribs, w't per doz. 41 lbs.

No. NN419—Full half dozen crate, per dozen $24.00

No. N419—Less than crate, per dozen $24.00

HALF DOZEN IN A CRATE

GOPHER

TRIUMPH

The easiest and safest trap to set. Jaws take a high grip, killing quickly. Well constructed, cannot get out of order. Gripper Jaws act independently adjusting themselves to uneven ground.

No. 51—W't per dozen 2 lbs., per dozen $3.00

ONE DOZEN IN A BOX

O. K.

No. 61—6¾x4x3 in., hardwood box, stained red, flat galvanized trigger, round coppered iron sticking bar, two strong springs w't per doz. 7 lbs. .....per dozen $4.50

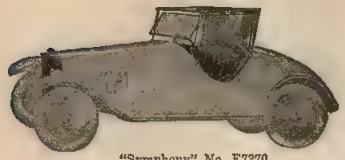
SPECIAL BODIES FOR FORD CARS



"Symphony" No. F7370.

"Tuxedo" No. F7371.

General Specifications:

Frame—Hardwood throughout, all joints properly made and securely fastened. Floor boards and dash furnished with all openings cut and wear plates furnished.
Body—22 gauge cold rolled body stock throughout.
Hood and Shell—22 gauge cold rolled body stock.
Top—Square type, collapsible, supported upon knock-down tubular frame; made of high grade pebbled finish top material; fitted with two-piece side curtains. Back of top and curtains equipped with square celluloid lights.
Windshield—Slanting, one-piece, ventilating type. Glass set in rubber in standard rolled frame.
Upholstery and Cushions—Manufactured leather pebbled or straight grain finish. French pleated and fully stuffed.
Cushion—Wood frame with oil tempered coil springs, fully stuffed and covered.
Painting—Primer, color and varnish coats. Stock colors red and brewster green. Hood and shell black baked enamel or same color as body at our option. Other colors extra and at a delay of three weeks in shipment.
Fittings—All bodies are fully equipped with necessary bolts and plates for attaching without alteration. All openings are cut in dash and floor. Floor and brake lever plates furnished. Fender irons standard equipment. Running board, dust-shield, fenders, and radiator not furnished. Bodies are built to fit any model T Ford Chassis.
IMPORTANT—In ordering, advise whether body is for old or new style radiator. Failure to do so means delay and expense.

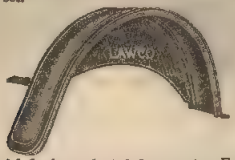
COMMERCIAL FENDERS
FOR FORD CHASSIS

When a Ford car is converted into a commercial car, a pair of these fenders are necessary as the fenders which are furnished with the Ford chassis will not allow a body to be put on. The fenders here shown are made of heavy gauge steel with two coats of lustrous black enamel, baked on. They match the front fenders and are easily attached. Two in a set.



Commercial fenders adapted for one ton Ford trucks, for use with all truck units and Smith Form-A-Trucks, extra heavy steel, two irons and apron, very rigid and strong.

No. F7431

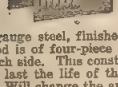
1 pair to a crate, w't 33 lbs.★ ....per pair $8.00
5 pair to a crate, w't 135 lbs.★ .....per pair 7.50

This Fender is designed to be used on Ford trucks, wherever a Ford has been remodeled into a delivery car. Easily installed. Finished in black enamel to match the front fenders furnished with Ford cars.

No. F7430

1 pair to a crate, w't 35 lbs.★ .....per pair $7.60
5 pair to a crate, w't 130 lbs.★ .....per pair 7.00

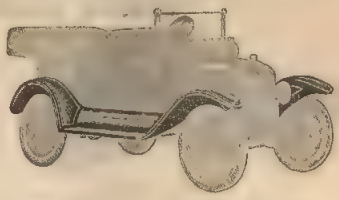
HOODS
—FOR FORD CARS—



Made of heavy gauge steel, finished with two coats of black enamel. Hood is of four-piece construction, hinged in center and on each side. This construction is in general use today and will last the life of the car. For all 1917 to 1921 Ford cars. Will change the appearance of a 1915-1916 Ford when used with our No. T7457 Radiator to that of a 1921 Model.

No. F7398—1721—1 pair to a carton, w't 22 lbs.,
each★ $6.70
No. F7399—5 pairs to a crate, w't 80 lbs.,
each★ 6.00

LAWCO INTERCHANGEABLE FENDERS



FOR 1917 TO 1921 FORD CARS

These Fenders are duplicates of the regular equipment on 1921 Ford cars and can be attached easily to all Models of 1917 and later. Made of the same gauge of material as used in the Ford Fender and finished with two (2) coats of high grade black enamel.

No. W7426—W't per set 85 lbs. . .....per set $20.00

ONE SET IN A CRATE

RUNNING BOARD SHIELDS
LAWCO

The Shields are made to fit Ford cars manufactured from 1917 to 1921. Exact duplicates as furnished on 1921 cars, manufactured of heavy gauge steel finished in two coats of black enamel. These shields will fit all Model T Fords, 1911 to 1921 if our No. W7426 Fenders are used in connection with them on 1911 to 1917 Models.

No. W7427—1 pair to a crate, w't 31 lbs.,
per pair $6.70
No. F7428—5 pairs to a crate, w't 105 lbs.,

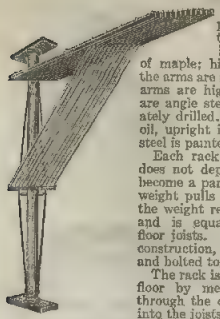
"Full rights" carried in stock only in No. SW and No. 10G gloves and all others in stock are regular, but can ship any in "full rights" from factory.

RUG DISPLAY RACKS

"BEST"



The upright which support the arms is made of thoroughly seasoned long leaf yellow pine; arms are of maple; hinges which are riveted to the arms are malleable iron; braces under arms are high carbon steel; hinge-bars are angle steel, hand-forged and accurately drilled. The arms are finished in oil, upright is painted two coats. The steel is painted and varnished.

Each rack is complete in itself and does not depend upon the building to become a part of it. Not one pound of weight pulls on the ceiling or walls, as the weight rests entirely upon the floor and is equally distributed over the floor joists. No nails are used in their construction, and all parts are mortised and bolted together.

The rack is fastened to the ceiling and floor by means of lag screws going through the ceiling plates (of the rack) into the joists or beams.

Equipped with 9 Foot Arms.

Under ceilings 12 feet 10 inches high or higher, the top of 9 foot arms is generally placed 12 feet 4 inches above the floor. This makes a 9x12 rug clear the floor about 6 inches, as the rugs are raised 2 inches above the arms when hung.

Where ceilings are less than 12 feet 10 inches, even as low as 12 feet 3 inches, the rugs can be hung the 12 foot way, up and down, but they will necessarily hang nearer the ceiling and floor. Under ceilings less than 12 feet, rugs can be turned in at the top or bottom—simply a matter of choice, or they can be displayed landscape on 12 foot arms.

Each arm displays two rugs.

	Each
No. 15—15 arms; capacity 30 rugs	✣$260 25
No. 20—20 arms; capacity 40 rugs	✣ 346 80
No. 25—25 arms; capacity 50 rugs	✣ 433 50

No. 35—35 arms; capacity 70 rugs	✣ 606 00
No. 40—40 arms; capacity 80 rugs	✣ 693 75

Shipped K. D.

Note—For 10 ft. 6 in. arms add 45 per arm; for 11 ft. 3 in. arms add 60 per arm; for 12 ft. arms add 60 per arm.

In case less than 15 arms are desired we will furnish the 15 arm unit or rack with as few as 10 arms allowing 400 per arm for each arm less than 15, but not less than 10. Inasmuch as the hinge-bars are drilled for 15 arms the other 5 may be added as they are needed.

DISPLAY STANDS

BROOM AND GROCERS

Plain, stands on casters, made entirely of iron; holds fifteen floor brooms, besides brushes, etc.; only occupies space of sugar barrel.

Prices on application.

"UNIVERSAL" ELECTRIC CLOTHES WASHER

Simple, rigid construction. Fully enclosed cabinet. Noiseless in operation. Cylinder reverses every other revolution combining advantages of revolving and oscillating principle. Latest improved safety features applied to washer, wringer and motor.

No. W1930—Fitted with 110 volt, 60 cycle, alternating current motor, each $245.00

For D. C. voltage motors, add $5.00 extra.

SAFETY: All moving parts of the "Universal" Clothes Washer are entirely enclosed, eliminating any danger to children or to the operator from clothes caught in the motor or driving mechanism. The machine can only be started by a positive motion—shifting the control lever to its correct position—the quick release control stops the machine by simply striking outward the knob of the control lever. The tension of the wringer rolls can be instantly released by one stroke of the hand. All electric connections thoroughly insulated.

EFFICIENCY: The principle of the "Universal" Electric Clothes Washer combines the advantages of both revolving and oscillating type washers. By comparative tests the "Universal" Electric Clothes Washer has proved to be in a class by itself when it comes to thoroughly cleaning both the daintiest and heaviest fabrics in the quickest time and with the least possible labor.

SIMPLICITY AND DURABILITY: The control is simple, handy and very easily operated All mechanism is easily accessible by removing one of the side panels—will not require the constant service which has been the bug-bear of most Electric Clothes Washers.

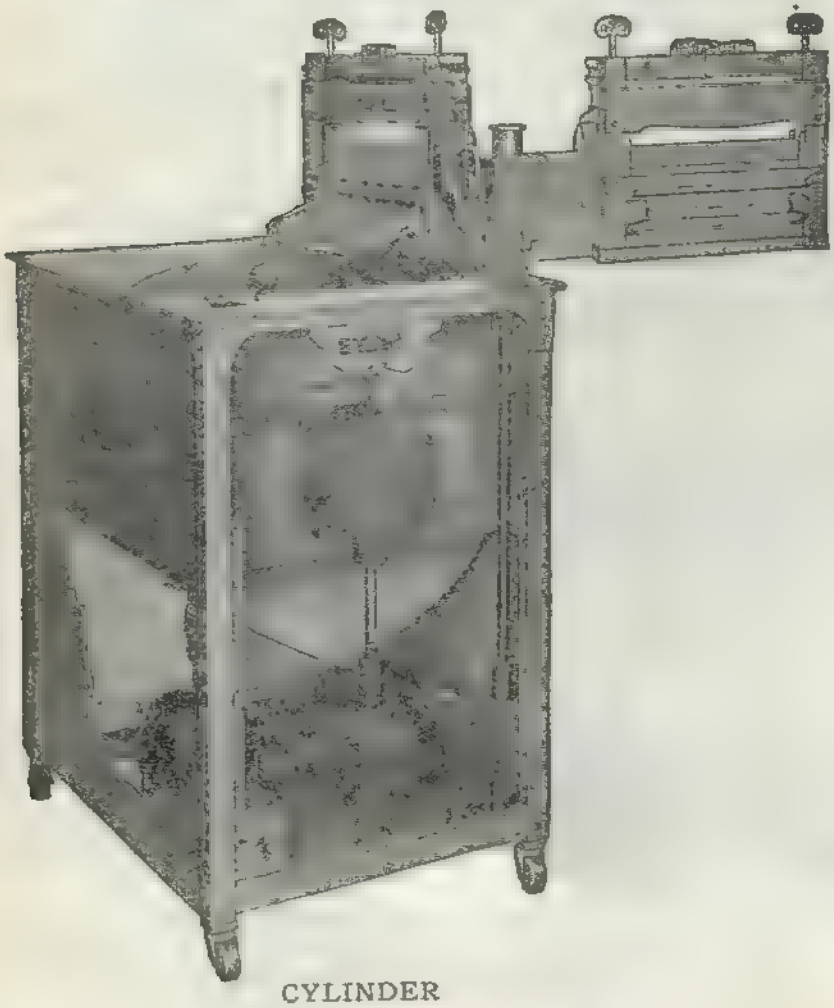
MECHANICAL SUPERIORITY: The machine equipped throughout with accurately cut gears completely enclosed and running in oil, eliminating the usual lubricating troubles on Washing Machines. In ordinary family use these parts will not have to be oiled for several years. It will give service for a life time if used according to factory directions.

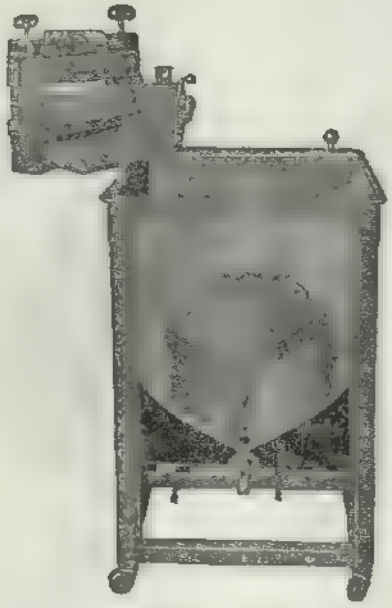
Latest improved swinging wringer, cannot be operated unless locked in position. Position cannot be changed while the rolls are in motion.

The cylinder automatically stops with opening at the top and locks in that position thus preventing the cylinder from rolling while clothes are being put in or taken out.

ATTRACTIVENESS: In appearance the "Universal" leads the field. The neat cabinet in which the whole machine is enclosed is beautifully decorated in distinctive blue gray enamel with decorative trade mark design. This gives an ornamental feature to the machine which appeals to the housewife who takes pride in her household equipment.

"UNIVERSAL" ELECTRIC CLOTHES WASHER





Sectional view showing quick draining tub construction

CYLINDER

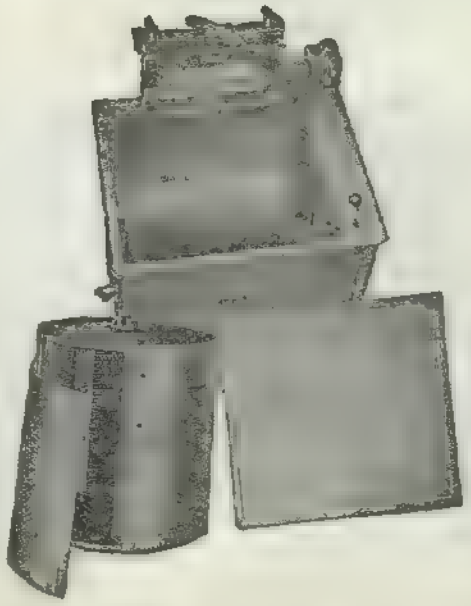
Durable, sanitary, zinc cylinder, reversible type. Length 18½ in. Diameter inside 18 in. Weight 19 lbs. Easily removed and cleaned. Size and construction of cylinder holes prevents possible injury to most delicate fabric.

The cylinder revolves twice one way and then reverses, revolving twice in the opposite direction, making 18 complete revolutions per minute. Action combines the advantages of both revolving and oscillating type washers. When not operating cylinder automatically locks in position with opening at top, a very desirable feature.

There are 5 Maple Lifters on the inside of cylinder which carry the clothes up until they fall back of their own weight into the hot suds. The action of hot suds surging through the clothes as they fall, washes out the dirt.

TUB

Quick draining, easily cleaned, galvanized tub with settling zone. Drain cock outside of cabinet 10¾ in. from floor, has threaded end for attaching hose, if desired.



Cylinder and cover removed showing inside of tub

"UNIVERSAL" CAMERAS

Made for Butler Brothers by Burke and James, Inc., makers of the famous "Rexo" Camera. There is no maker of Cameras in America that stands higher in the opinion of scientific men. That is why among all the Cameras makers of Europe and America they were selected to build Aeroplane Cameras for the British Army. Universal Cameras are sturdily built. The frame is more solid and stronger than other makes. Each Camera in the "Universal" line is a beautiful, finished instrument that will do perfect work. No Camera leaves the Burke and James, Inc. factory until it has passed the company's laboratory tests. This means that every Camera shipped is a perfect one. Butler Brothers are pleased to say that this is the first time the old and reliable corporation of Burke and James Inc. has ever sold a Camera through any other than its own agents.

UNIVERSAL CAMERAS

Five distinctive features found in every folding "Universal" camera

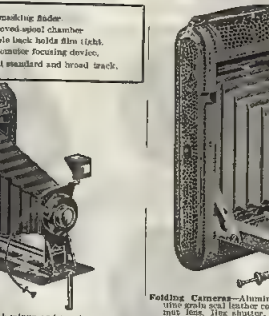
1—Self masking finder
2—Improved spiral chamber
3—Double back holds film tight.
4—Micrometer focusing device.
5—Rigid standard and broad track.

Box Cameras—Wood and metal construction covered with very durable imitation embossed leather, universal focus meniscus lens, 3 diaphragm stops, automatic shutter for both time and instantaneous exposure, new metal spool holding device insures quick loading and smooth winding of film, burnished brilliant view finders of a large size (except 1K6176), absolutely light tight

1K6176		1 in pkg.	
1K6179	Mfrs.' size of pictures 2¼x2¼	Each	$1.88
1K5177	" 2A " " 2¼x4¼	"	2.63
1K5178	" 3 " " 3¼x4¼	"	3.38

Junior Folding Camera—Aluminum and wood construction covered with imitation leather, covered double bellows, rapid rectilinear lens, Wollensak shutter, time bulb, 1-25, 1-50, 1-100 second graduations

1K5180	Mfrs.' size of picture 2¼x3¼	1 in pkg.	$9.75
1K5171	" 3A Jr. " 3¼x5½	"	14.25



Folding Cameras—Aluminum and wood construction, genuine grain seal leather covered, rigidly formed "S" swinging front, Ilex shutter, time bulb, 1-25, 1-50, 1-100 and 1-200 second graduations. Double back prevents fogging. Reversible finders insure sharp and clear pictures. Rich Unished standard and wide track

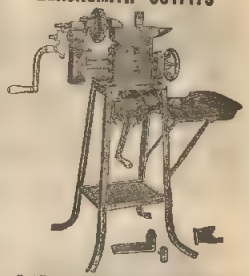
CHAMPION IMPROVED COMBINATION BLACKSMITH OUTFITS



Outfit, equipped with Forged, Vise, Anvil, Pipe Vise, Drill Press and Emery Grinder, strictly a high grade combination tool built for service.

Gears are all cut. Forge pan 12x14 inches, large enough to take a plowshare. Pan cut away so that a plowshare can be put into it. The Blower-head attached is a real cut-gear, high speed outfit that runs silent, is speeded high enough to produce a white pressure heat so that welding can be done on any work.

Emery wheel is screwed on stud between vise jaws attached to high speed gear on this gear box, two substantial bearings—one on each side of vise jaws—support this wheel, making it a rigid, practical, durable grinder.

Screw accurately cut and two heavy shafts support vise so that jaws meet perfectly without lost motion.

Pipe vise operates without any change whatever. No parts are removed or lost and this machine takes pipe up to two inches

Legs are angle steel, well riveted to top plate and tool tray, two steel rods support forge pan

Height over all	40 in.
Height to top of Forge Hearth	26 in.
Width of Vise Jaws	4 in.
Extreme opening of Vise Jaws	4½ in.
Capacity of Pipe Vise	2 in.
Capacity of Drill Press	½ in.
Greatest distance from Spindle to Table	11 in.
Spindle bored to take	½ in.

GUARANTEE VISIBLE GASOLINE MEASURES

Outfit comprises two separate and distinct units, a measuring device, which is primarily designed for location outside of building or any point where customer can drive up close; the pumping unit, consisting of a rotary vane pump driven by a powerful electric motor or gasoline engine, the whole pumping system being mounted on a cast iron base in the neatest and most compact manner. The pumping unit is intended for location inside the building, but at points close as practicable to the measure itself.

Container at top of pedestal is of glass, protected by a guard of expanded metal mesh, and marked to measure from one to five gallons. Operating in this container and extending down through the pedestal is a 1-inch standpipe which connects with the supply line from the gasoline tank by means of a union. This standpipe can be raised or lowered so as to adjust the height of the open end to the container to correspond with the 1, 2, 3, 4 and 5 gallon marks on the glass. Adjustment is made by means of a handle attached to the standpipe, and extending through the opening in the pedestal, the handle sliding in the notches in the circular clips.

The pipe to the right of the container is a conduit which carries the wiring for both the motor and the light globe. The pipe to the left of the container is a vent pipe, extending from the top of the container down through the pedestal, and connecting by means of a union to pipe from the intake end to the standpipe, which deflects the gasoline downward as it issues from the pipe opening.

OPERATION

Let us suppose three gallons is desired. The standpipe is raised to a height which will permit shutting of the handle into the notch marked 3, which causes the open end of the pipe to be even with the level of the three gallon mark on the glass. The ball handle is then raised, starting the motor which rapidly exhausts the air from the container drawing the gasoline up by vacuum. The liquid is permitted to flow until its level is above that of the open end of the standpipe, and the ball handle, being released by the operator is returned to its normal position by means of a spring. The action produced by the dropping of the ball is twofold, the current is turned off from the motor stopping the pump and at the same time admits air to the container, which at once permits any excess liquid to flow back through the standpipe into the gasoline storage tank, leaving but three gallons exact in the container. This is then drawn off by means of the faucet through the delivering hose, into the tank of the automobile.

No. 1—Guarantee Visible Gasoline Measures; wired for electric power plant and equipped with either AC or DC motor, also hose, nozzle and gasoline measure; wgt. 550 lbs. ..... Each $550.00

No. 2 Guarantee Visible Gasoline Measures; wired for electric power plant and equipped with either AC or DC motor, also hose, nozzle, meter and gasoline measure; wgt. 580 lbs. ..... Each 675.00

GREASE GUNS, MOTOR CLEANERS

ROTHWEILER BARREL PUMP

A Rothweiler Pump saves the big investment in oil tubs.

It will get all the oil out of the barrel. Easy to operate. Will last forever. Pumps a full quart to the stroke.

Patented anti-drip Spout. Oil cannot be wasted and the top of the barrel is always clean.

A Rothweiler Pump taps the original barrel, so your customer knows that he got the brand of oil asked for.

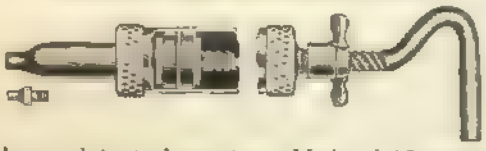
Rothweiler Barrel Pump—Each..... $10 00

SUNDERLAND No. 1 GREASE GUN

As shown, the cap unscrews from cylinder and drops back on hinge permitting the stripping ring to be pushed back toward handle. The piston is pulled back and gun is then filled by shoving cylinder into grease can. Cap is then swung into place and locked by turning cylinder into it. If hard grease is used the screw may be turned and the hard grease will be forced out through flexible spout. If soft grease is used the piston may be connected from a screw type to ordinary push type by half turn of locking device. Capacity, 12 ounces; length of cylinder 12 inches; weight 3 pounds. Made of heavy steel cylinders, finished in unpolished enamel.

No. 1 –Sunderland Grease Gun Each $6 00

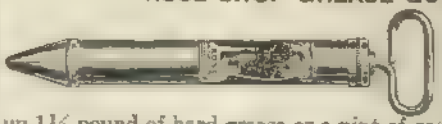
SILVER GIANT GREASE GUN



A heavy duty tool –no toy. Made of 16 gauge steel; dent proof. Threads too heavy to strip. For use with grease or oil. Equipped with malleable ratchet and threaded steel piston so that hard grease can be handled with ease. Spout for oil carried in handle. Washers made of best leather 3/16 inch thick and treated to withstand constant contact with grease. Guaranteed for five years. Capacity 12 ounces. Length 20½ inches. Weight 4 lbs. Packed one in a strong carton.

Silver Giant Grease Gun Each $3 50

ROSE SHOP GREASE GUNS



Made especially for shop use; self loading—fills by suction; will draw up 1¼ pound of hard grease or a pint of gasoline or lubricating oil with one stroke; made of heavy steel seamless tubing; brass top and detachable nozzle; measures 1½ inches outside by 24½ inches over all.

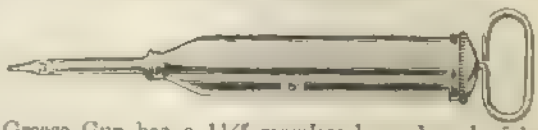
Rose Shop Grease Guns; wgt. 3 lbs..... Each $4 00

PIONEER GREASE GUN

Fitted with swivel ball joint at end to turn in any direction. Entire nozzle unscrews for filling with oil or grease. Barrel measures 1¼x12½ inches; length over all, 15 inches. Combination spout for oil or grease.

Pioneer Grease Gun Each $1 75

STANDARD GREASE GUN



Grease Gun has a 1⅛" seamless brass barrel of heavy gauge, is well made and fitted with cork plunger.

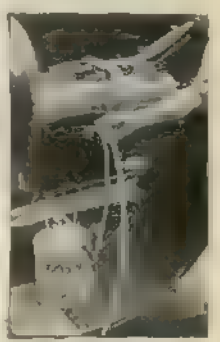
Standard Grease Gun..... .....Each $0 75

ROMORT ENGINE CLEANER

Air does not enter tank but passes right through the air tube, picking up the fluid at extreme end of cleaner, eliminating all danger of explosions. Capacity, 2 quarts. 20½ inches long, 4 inches diameter. Nozzle adjustable for fine or heavy stream.

Romort Engine Cleaner..... Each $3.50

IMPERIAL MOTOR CLEANER



Connect Motor Cleaner to air line as shown in top illustration, drop end of kerosene hose in can of kerosene, turn down thumb screw and "let 'er go!" Releasing thumb nut shuts off air. Flow of kerosene adjusted with knurled ring, where spout joins body of cleaner. Flow of kerosene may be shut off completely if desired, thus using the device for drying the cleaned surface.

No. 20C –Imperial Motor Cleaner; wgt. ¾ lbs Each $2.50

UNIVERSAL COMPRESSION COUPLING

Is used in connection with Standard Schrader Pressure Gauge for determining the exact compression in each cylinder of a motor. Fittings furnished permit of it being attached to all motors.

Universal Compression Coupling . Each $1 00

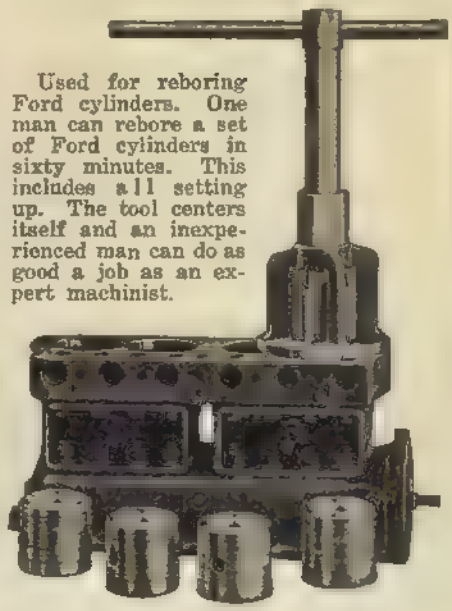
Davis Cylinder Reboring Jigs and Reamers

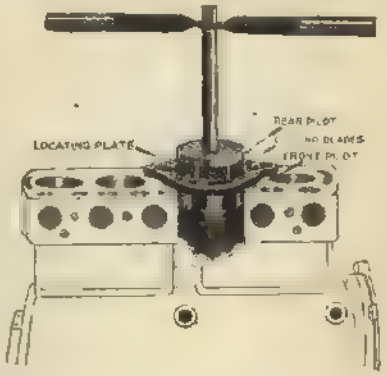


Used for reboring Ford cylinders. One man can rebore a set of Ford cylinders in sixty minutes. This includes all setting up. The tool centers itself and an inexperienced man can do as good a job as an expert machinist.

Reamer is adjustable for size. Weight 45 lbs. Worm blades can be sent out and reground.

Each $75.00

Ford Cylinder Reamers



The simplest solution of the problem of the worn cylinder. All working parts are hardened and ground, which includes the pilots, both front and rear, so that constant friction against the cylinder walls will not wear them. This tool reams the cylinder standard oversize.

Each

Cylinder reamer .031 oversize.....$22.50
Cylinder reamer, other oversizes.. 25.00

Spark Plug and Cylinder Head Nut Wrenches

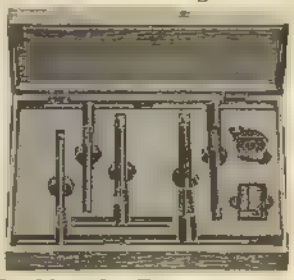
No. 1F Drop forged; same size and style as packed with regular Ford equipment .....each, $0.60

Dyer Bushing Extractors

This is a very simple tool that will save time, temper and tools. It is operated by squeezing the spring arms together with pliers and then inserted in one bushing. When driven in, it will expand after passing the first bushing and seat on the edge of the other. It will then be a simple matter to drive this bushing out. Made of tool stock, hardened and polished.

Each $1.50

Ford Bushing Extractor Sets



A combination set which will extract all Ford bushings. Consists of: No. 1 Tool for ⅛ to ¼-in. bushings, No. 2 Tool for ⅝ to ¾-in. bushings, No. 3 Tool for 47/64 to 1-in bushings. No. 4 Tool for ⅞ to 1⅛-in bushings and No. 79 Tool, consisting of spindle and Nos. 7 and 9 spools. Will extract bushings 1⅛ to 2⅛ in.

Complete in wood case....per set, $30.00

Tool Kits

This set contains all of the regular tools furnished with the Ford cars and in addition many tools very necessary in emergencies. Tools are of the best quality and finish. Consists of the following tools, 9 inch black automobile wrench, 3 inch electricians' round shank screwdriver, 6 inch black combinat on pliers, No 27 semi-finished drop forged wrench, 5 inch offset screwdriver, 8 ounce ball pein hammer and ⅝ inch cold chisel.

No. 910 .....each, $4.00

Adjustable Wheel Pullers

Fits Ford cars equipped with taper rear axles. Is adjusted by a bolt on one side of cap. Hub thread arrangement for adjustment prevents slipping of threads. To remove wheel simply screw wheel puller on the hub and tighten the bolt.

Ford Special ..... each, $0.65

BUSHING REAMERS FOR FORDS

Bushing Reamers

Highest quality steel accurately finished.

No. 2517	Differential case	$5.00
No. 3820	Front spring perch	2.25
No. 3844	Rear spring perch	2.25
No. 2525B	Differential pinion	2.25
No. 2527	Differential spider	3.75
No. 2540	D. S. front housing	3.75
No. 3521	Steering gear pinion	1.75
No. 2559	Hub cam shaft	1.90

Cam Shaft and Steering Post Bushing Reamers

Takes care of following bushings

No. 3042	Cam shaft front bearing.
No. 3043	Cam shaft center bearing.
No. 3044	Cam shaft rear bearing.
No. 3045	Steering post bracket bearing.

Each $2.75

Brake Drum Assembly and Driven Gear Sleeve Bushing Reamers

Reams following bushings

No. 3311	Brake drum assembly.
No. 3320B	Driven gear sleeve bushing.
No. 3320C	Driven gear sleeve bushing.

Each $5.50

Transmission Driving Plate Bushing Reamers

No. 3327B .....each, $3.25

Wrist Pin or Piston Bushing Reamers

This reamer is made especially to ream both bushings for the wrist pin at one operation and insures perfect alignment.

No. 3022½.....each, $2.25

Crank Shaft or Main Bearing Bushing Reamers

Designed to ream the three bushings for the crank shaft at one operation and obtain perfect alignment of these bearings. Saves much time in accomplishing this work, and constructed in a way to make it easily operated.

No. 3031-2-3.....each, $15.00

Spindle and Spindle Arm Bushing Reamers

Made to ream these bushings in perfect alignment at one operation. Long section is for the spindle body bushing and the short portion is for the spindle arm bushing. Furnished in straight or spiral flute.

Nos. 2713-2714 Reamers.....each, $2.00

Push Rod and Valve Stem Reamers

An oversize push rod reamer with pilot made to ream the push rod guides to take push rods ⅛ inch oversize. Has pilot long enough to engage the valve stem guides before the reaming portion enters the push rod guides. The tool can be operated with an ordinary double end reamer wrench.

No. 3058B With pilot.....each, $4.00

No. 3052X Valve stem bushing reamers .....each, 2.00

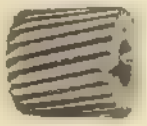
Spiral Flute Reamers

Made of highest quality steel obtainable and the best for the use intended, accurately finished.

No. 3024 For connecting rod.....each, $5.00

No. 3314½ For triple gear flanged bushing .....each, 2.50

Transmission Reverse Gear Bushing Reamers



No. 3304W .....each, $12.00

Transmission Slow Speed Gear Bushing Reamers

No. 3309W .....each, $8.00

Combination Reamer and End Mill for Propeller Shaft Bearing

Furnished for Ford Cars or Ford One-Ton Trucks

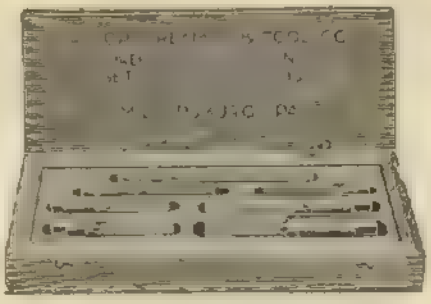
This tool reams the propeller shaft bearing and faces the end of the bushing in one operation. The guide accurately aligns the bearing with the shaft, and the end mill faces the bushing square with the bearing.

The guide is strongly recommended, as the short length of the propeller shaft bushing makes the use of a pilot reamer impractical.

No.		Each
2581R	For Ford cars	$ 9.00
1076R	For Ford one-ton trucks	10.00

Alvord Reamers for Ford Cars

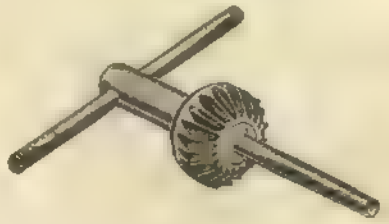
Ford Set No. 13



Consists of seven reamers, one each Nos. 2713-14, 2540, 3820-3844, 3044-3042-3545, 2559, 3059½, 3022½. Used in most repairs aside from transmisison work. Best quality tool steel, well finished and accurate to size. Packed in hardwood compartment case.

Per set $20.00

Valve Seating Tools



A handy tool for garage and repair shop, for use on the Ford and Fordson Tractor valve seats.

They do the work quickly and accurately; are made from highest quality tool steel. All machining is accurate and are capable of turning out a perfect job.

They will reface valve seats with the same accuracy and perfection as they do their other work.

		Each
No. 213	Valve Seating Tool	each, $2.25

One in a Carton

Valve Refacers

Is intended to scrape the face of the valve, and is so constructed that the proper angle will be given when using this tool.

Each $0.25

WALDEN-WORCESTER WRENCHES

GARAGE SERVICE WRENCHES

AS APPLIED TO FORD CARS

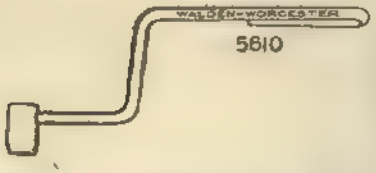
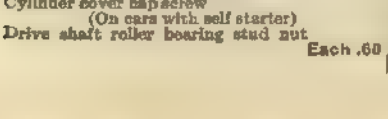
1620 Tomahawk. Triple socket Wrench. Socket sizes ⅜" and ½". This is the original Triple Socket Wrench, trademark "TOMAHAWK," having ½" rod connecting the two sockets. The sockets are particularly shaped to increase their usefulness. Will fit the following:
Axle housing bolt and nut
Brake shoe support bolt
Cylinder head cap screw
Dash bracket to dash bolt and nut
Drive shaft roller bearing, stud nut
Water cylinder inlet connection cap screw
Water cylinder outlet connection cap screw.
Each .70

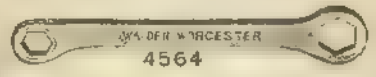


5810 Connecting Rod Wrench. Fits all connecting rod cap nuts. Includes the fourth connecting rod. This is an original design, the first wrench made to reach the fourth connection without removing the engine from the car. Be sure you get the wrench with all right angle bends and loop handle. No. 5810 stamped on handle.
Each .55

2718 Tee Handle Wrench. Socket 9/16", handle 6" shank 12". Used on:
Commutator case support bolt
Crank case and cylinder cover cap screw
Cylinder cover bolt and nut
Cylinder cover cap screw
Fan adjusting screw and nut
Magnet bolts
Radiator stud nut
Universal ball cap bolt and nut Each .60

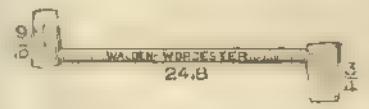


2720 Tee Handle Wrench. Socket ⅝", handle 6", shank 12". Used on:
Commutator case support bolt
(On cars with self starter)
Cylinder cover cap screw
(On cars with self starter)
Drive shaft roller bearing stud nut
Each .60

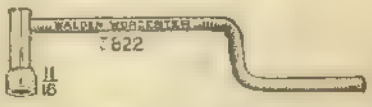


4564 Ratchet Wrench 1 1/16" hex opening particularly designed for use on the Ford brake and reverse transmission bands. Opposite end 15/16" for use on slow speed connecting lock nut and also CHAMPION X Spark Plugs. One of the most valuable tools to an owner on account of the ease in taking up bands. Each 1.30

5860 Triple Socket Offset Wrench Socket sizes 15/16" 7/8" and 13/16" Length over all 10½" Handle particularly designed for heavy duty. Will fit the following
Body bracket bolt and nut
Front radius rod nut
Front spring perch nut
Front and rear spring hanger nut
Hub bolt and nut
Radius rod bolt and nut
Rear spring clip nut
Spindle bolt with oiler
Spindle connecting rod bolt with oiler
Spindle connecting rod bolt nut Each 1.20

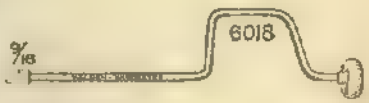


2418 Double Socket Offset Wrench. Length over all 9". Socket sizes 9/16" and ¾". Will fit the following:
Brake reverse support bolt and nut
Brake shoe support bolt
Clutch pedal support bolt and nut
Crank case arm bolt and nut (side)
Crank case arm bolt and nut (top)
Crankshaft bearing bolt nut
Crankshaft rear bearing bolt
Dash bracket to dash bolt and nut
Differential case stud and nut
Fan bracket bolt
Front fender iron bolt and nut (bottom)
Front spring clip nut
Inlet and exhaust clamp stud nut
Spindle bolt nut
Steering post bracket bolt and nut
Steering yoke clamp bolt and nut
Universal ball cap, bolt and nut
Universal ball cap screw
Each .80



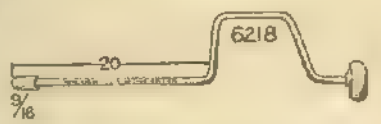
3822 Socket size 11/16" hex. Used on fly wheel cap screws, heretofore considered an impossible place for a socket wrench An ugly place made accessable. Each .68

1881 Socket sizes, 9/16" hex and 9/16" square. Length over all 9". Will fit the following:
Crank shaft, bolt and nut
Piston pin, locking screw
Running board, bolt nut
Running board to fender, bolt nut
Each 1.10



6018 Long Shank (11") Brace Speed Tool. Over all length 19¼". Socket size 9/16". Used on
Commutator case support bolt
Crank case and cylinder cover cap screw
Cylinder cover cap screw
Fan adjusting screw and nut
Magnet bolts
Transmission cover bolt and nut
Each .88

6020 Long Shank (11") Brace Speed Tool. Over all length 19¼". Socket size ¾". Used on:
Commutator case support bolt
(On cars with self starter)
Cylinder cover cap screw
(On cars with self starter)
Cylinder head cap screws
Each .88



6218 Long Shank (20") Brace Speed Wrench. Socket size 9/16". Over all length 26". Used on:
Front fender iron bolt nut (side)
Radiator stud nut
Each 1.10

6064 Short speed wrench. Socket size ½" hex. Length over all 13¾", Will fit the following:
Crank case, lower cover screw
Differential drive gear case
Muffler rod nut
Rear axle housing, bolt and nut
Steering tube flange, bolt and nut
Each .77

T1078 — Standing full bisque doll; assorted boy and girl; jointed shoulder; painted features; painted hood height 4 ins.; 1 dozen in box Dozen. .. .42

T1076—Cowboy, finely modeled; with neck scarf, sombrero, cartridge belt, holster, etc.; nicely painted length 4 ins.; 1 dozen in box. Dozen .. .72

T1077 Red Cross Nurse' embossed hair, painted features, white cap and costume, black shoes; with emergency case; length 4 ins.; 1 dozen in box. Dozen. 72

T1078 — Ambulance Corps Nurse; khaki costume and cap, emergency belt and operating case; nicely modeled and colored; length 4 in.; 1 dozen in box. Dozen. .. .72

T1066 — Standing full bisque doll, jointed shoulders, finely modeled head; painted features; height 4½ ins.; 1 dozen in box.
Dozen .....,..... .45

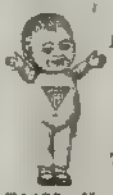
T1075 — Flesh tinted bisque girl doll, jointed arms; embossed hair, blue ribbon; painted features; in bathing costume, length 4 ins.. 1 dozen in box.
Dozen .38

GT1204 — Bisque, flesh tinted, painted features; embossed hair, jointed arms; white, blue shaded pantalettes and shirt; length 4½ ins.; 1 dozen in box. Dozen 85

ASSORTED THREE KINDS

T1081—Fine flesh tinted bisque, jointed arms; heavily embossed hair, blue ribbon band; excellent features, length 4½ ins.; 1 dozen in box
Dozen ..... .43

SONNY



Full bisque standing doll, "Sonny;" jointed shoulder; painted features, hair, shoes and stockings; 1 dozen in box

T1079—Height 4½ in.
Dozen . 45

T1080—Height 6 ins Dozen.. .82

BATHING DOLLS

T1061 — Finely modeled; painted features and hair, blue stripe bathing suit, red belt, jointed arms; length 3½ ins.; 1 dozen in box. Dozen..... .42

T1062 — Same, larger, length 4 ins. Doz. .72

T1063—Same, larger; length 5 in. Dozen ..... .89

T1068 — Sweetie; flesh tinted bisque, fine features; jointed arms, embossed hair, colored ribbon bows; length 5½ ins.; 1 dozen in box Dozen ..... .90

JOINTED ARM BISQUE KEWPIES

T1014—Select quality bisque; flesh tinted; painted features and hair jointed arms; length 4½ ins.; 1 in box
Dozen 2.00

T1015—Same, length 5¾ ins.; 1 in box
Dozen ... 3.75

T1016—Same, length 6½ ins.; 1 in box. Dozen.....6.25

T1017—Same, length 6½ ins., 1 in box. Dozen.....8.00

T1018—Same, length 8 ins., 1 in box. Dozen.....9.00

JOINTED ARMS AND LIMBS

T1074-Fine quality flesh tinted bisque; painted features; shoulder and hip jointed; embossed cap in colors length 3½ inches; each wrapped; 1 doz
n box Dozen .72

T1082—Flesh tinted bisque, extra fine quality; painted features; embossed painted hair; white and blue stripe hair band, pink bows jointed arms and limbs, length 5½ ins., 1 dozen in box
Dozen 90

COMPOSITION BODY DOLLS

BISQUE HEADS

T1331—Full composition body, jointed arms and limbs china head, embossed, hair, painted features; length 5 inches; 1 dozen in box.
Dozen .89

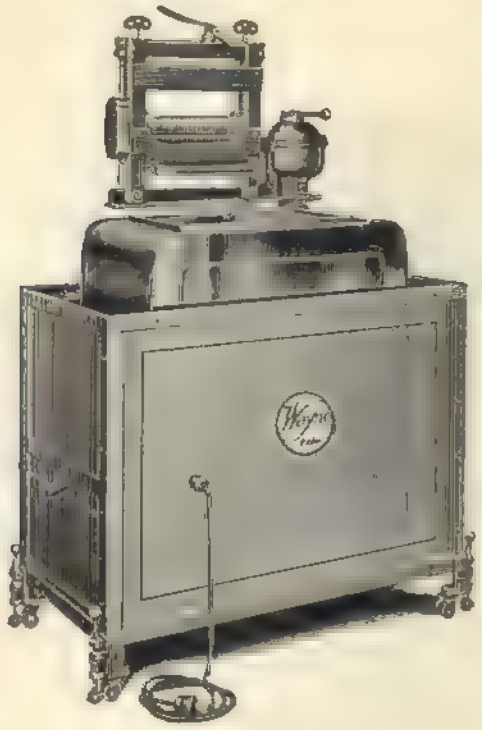
T1347—Same, but with extra fine bisque head; length 6½ ins.; 1 dozen in box. Dozen..... .90

CELLULOID DOLL ASSORTMENT

T1175—156 Dolls to retail 5c to 35c each; consisting of 1 dozen dolls to retail at 5c each; 4 dozen dolls to retail at 10c each; 3 dozen dolls to retail at 15c each; 4 dozen dolls to retail at 25c each; all handsomely dressed in assorted bright color embossed costumes; stationary arms, and jointed arms and limbs assorted; sizes range from 2½ to 6 ins. high; 13 dozen in case. Assortment 11 00

Dolls are every day sellers and you cannot afford to miss sales by not having a good showing in stock.

WASHING MACHINES



No. 100

ELECTRIC POWER

The Wayne washer is perfect in result, because correct in principle. The true rocking motion is obtained by means of curved steel rockers of which the cradle is an integral part and which is placed in the polished copper removable tub, which is devoid of pegs, slats, paddles, etc. The crank and connecting rod transmit the motive power, rocking the cradle, which agitates the clothes and water, forcing suds and water through the linen without possible injury to the finest fabrics. The tub is fitted with a short drain, water pours into pan and out through a spout in end of cabinet

Two levers control entire mechanism, one conveniently placed at side of tub controls starting and stopping of washer; other lever controls the action, forward, reverse and stop, of wringer; has but seventeen working parts, all bearings oilless. The high grade swinging wringer swings into four different positions, top lever operating rolls either way, lower catch locks wringer safely into any of four positions automatically. The expanding clutch starts tub smoothly, which is operated by a long lever. All exposed mechanism is inclosed. The insulated motor is ¼ horsepower, easily running washer and wringer at the same time, is set on special base to keep belt taut. The endless belt is made of ten-ply fabric and red rubber, wide and flat

Every joint and corner of the steel frame is welded, eliminating the use of bolts or rivets. Frame is fitted with casters and adjustable legs which adapt the washer to uneven floors, and are operated by foot lever. The cabinet is finished in baked on enamel, battle gray color. Regularly equipped with 110 volt, 60 cycle, single phase alternating current or 110 volt direct current motor, insulated cord and attachment plug.

Dimensions of frame, inches	36 x 18 x 25¼

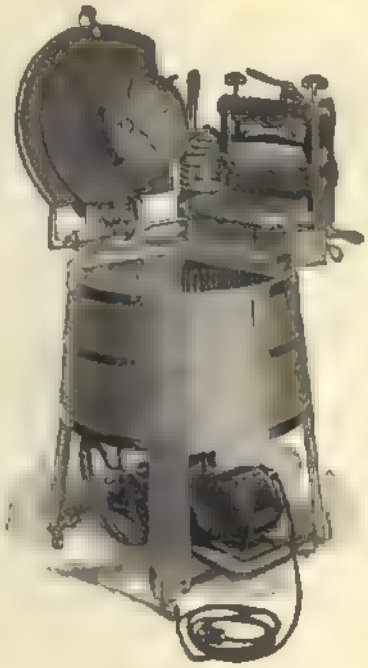
Weight, pounds	240
No. 100. Each	**$186.75**

WASHING MACHINES



No. 51M

ELECTRIC POWER

This machine has the vacuum system of washing clothes. The vacuum hood is made of one piece heavy corrugated galvanized iron, hot galvanized after it is stamped. Top castings are riveted to hood with copper rivets. The dasher post is made of round cold rolled steel and attached to hood casting. All outside gears are inclosed in a cylindrical guard, protecting operator from injury

Machine is equipped with a swinging wringer with hardwood frame, instant wringer release and 1¾ x 10 inch white rubber rolls; wringer operates in either direction, a reverse feature in case clothes get knotted to be removed, clothes can be removed from rolls without danger.

Tub is of Louisiana cypress, with legs thoroughly braced and fitted with casters. All gearing is machine cut and of cast malleable iron and steel Tub has three heavy, flat steel hoops. Dimensions of tub, height 12½ inches, bottom 23¼ inches diameter, top 20¾ inches diameter; finished in natural wood and varnished; all exposed iron parts are finished pearl gray. Equipped with high grade motor, cord and attachment plug. Regularly equipped with 110 volt, 60 cycle, single phase alternating current motor, or 110 volt direct current motor.

No. 51M. Electric vacuum washing machine. Weight 275 pounds ..... each, **$124.00**

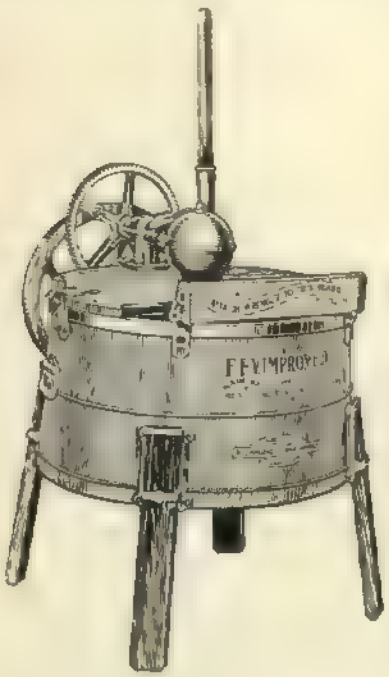
WASHING MACHINES

IMPROVED ROYAL

Water Power

Operates on 18 pounds pressure, by connection to ordinary water hydrants. The tub is of southern Louisiana cypress, with heavily reinforced lid, large wringer box and legs strengthened by cypress cross supports and steel rods. Has non-tearing agitator and shaft. The agitator is held rigidly to end of shaft and sliding movement to allow agitator to rest on top of clothes, is within the shaft. The motor is made entirely of brass and has a single valve and simple double follower head with full ability to stand wear and tear of 175 pounds pressure. Stave legs are strongly reinforced. Sides and bottom of tub corrugated. Highest grade rubber intake and outlet hose with connections. Tub is equipped with steel hinges. Lid support, handles and bolt with thumb nut lock

Improved Royal Water Motor Washer, Family Size.
Weight crated 75 pounds..... .each, **$32.25**



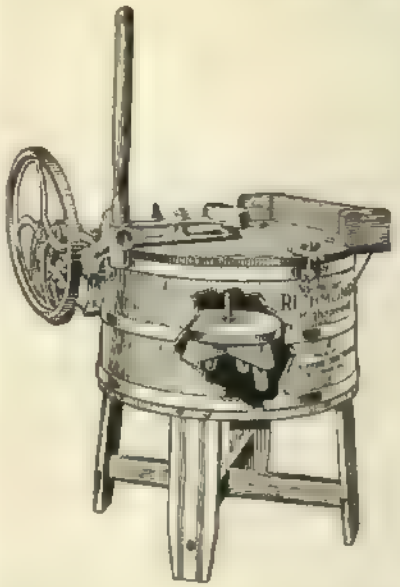
F. F. V. IMPROVED, HIGH SPEED

Virginia white cedar tub, corrugated inside, electric welded, galvanized steel wire hoops, sunk into grooves. Main frame is made of two solid halves, with self lubricating gear case. Gears are machine cut making them accurate, smooth running and noiseless. Fitted with fly wheel which runs on seven polished rollers. Lever handle is direct geared to mechanism and has forged steel pitman rod which drives machine with great power and speed. Tub equipped with substantial hinges, handles and cover fastener.

F. F. V. Improved, Family Size, Rotary Type. Weight crated 110 pounds.....each, **$22.50**

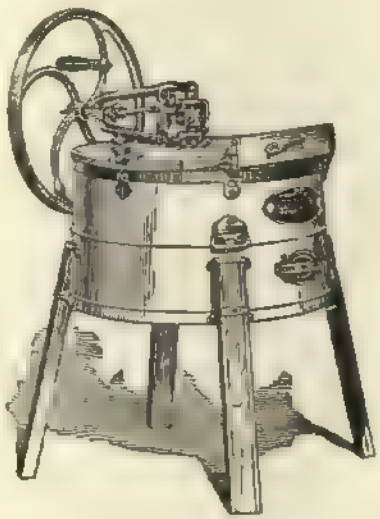
WASHING MACHINES

HIGH SPEED



Virginia cedar—clear white—tub, with hardwood legs, well bolted to the machine and securely braced. Tubs are corrugated on the inside and have tight fitting lids. The gears are all cut and covered, there are ten roller bearings, the dolly is of the X style, there is no dead center in its operation. The High Speed is finished with a coat of mahogany stain and completed with a coat of high quality coach varnish

High Speed, Family Size, Rotary Type. Weight crated, 115 pounds . . . . ..each, **$22.50**



MAJESTIC

Tub made of Virginia white cedar, with electric welded, galvanized steel wire hoops imbedded in grooves in staves. Corrugations on the inside of tub are smooth, the top fitting in tightly just above where corrugations end. Dolly is fitted with round, smooth pins. The mechanism consists of a large hub fitted with roller bearings, galvanized malleable dolly post, steel turned axle and large fly wheel which eliminates all lost motion. The legs set into substantial sockets. Wringer attachment securely fastened to tub. Tub equipped with substantial handles, hinges and cover fastener.

Majestic, Family Size, Rotary Type. Weight crated, 80 pounds .....each, **$17.25**

SHOP EQUIPMENT

AUTO AND TRUCK HOISTS

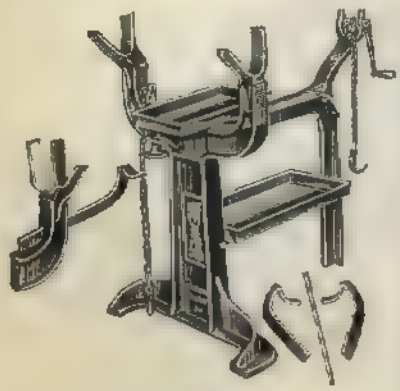
Auto Hoist has a leverage of approximately 200 to one; the heaviest cars may be raised with very little effort. Height of arch can be increased 24 inches by raising the braces on either side by means of the worm hoist, enabling raising of rear end of either limousine or touring car with top up, for removing the rear system. Carries upon four ball and roll bearing casters, 5 inches in diameter, insuring easy transportation. There is no danger of the Weaver Auto Hoist tipping over. The extremely wide base provides a safe and substantial foundation which insures the Hoist always standing erect. The Weaver Auto Hoist is used for many purposes. Height, 7½ to 9 feet; shipping weight, 555 pounds

Weaver Auto Hoist..... Each $120 00

Truck Hoist design is practically identical with auto hoist. Is of much heavier construction with recommended capacity of 6000 pounds for double suspension and 4000 pounds for single suspension. Leverage approximately 600 to one which is possible by employing worm type compound leverage gearing. Height 8 feet 4 inches to 10 feet. Weight 940 pounds.

Weaver Truck Hoist.. Each $200 00

UNIVERSAL AXLE STAND



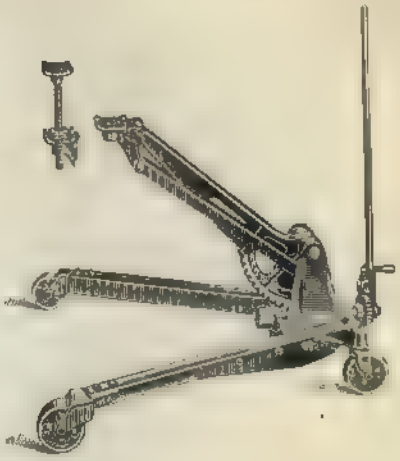
This Stand will handle any of the many different types of rear axles now in service and at the same time is simple in design. Will facilitate convenient and rapid work and is portable.

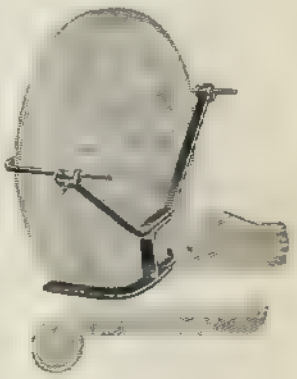
It is an advantage of no minor consideration to be able to pick up an axle, regardless of size or shape, and simply place it upon this stand the same as you would upon a bench, but have it held perfectly rigid and secure and in the most convenient working position.

The cast brackets are extremely strongly designed and made to withstand severe abuse. The design throughout carries extreme strength and simplicity, which is considered most essential in equipment of this kind. Shipping weight complete, 150 pounds

Weaver Universal Axle Stand.....Each $34.00

HI-LIFT JACK





Has been designed with an extreme range of lift to elevate either the front or rear of truck or passenger car to a height that permits mechanic to work comfortably and efficiently under car. Constructed on cantilever principal range of lift 7 inches to 45 inches.

Illustration at left shows truck wheel attachment in use with the Hi-Lift Jack. With this attachment truck wheels of any size or description may be handled with ease. Capacity 3000 pounds, Weight 225 pounds.

Weaver Hi-Lift Jack.. ...Each $60 00

Truck Wheel Attachment ....Each 10.00

SAFETY SERVICE CAN

A container in which gasoline, kerosene, lubricating oils, etc., may be carried in safety. Long flexible hose permits filling of fuel tanks and crank cases inconveniently located with ease. No muss, no waste. Service cars should be equipped with one or more of these cans

Weaver Safety Service Can ... . Each $5 00

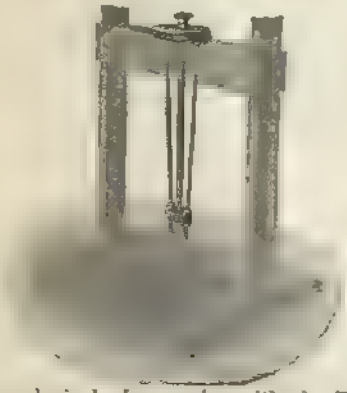
SHOP EQUIPMENT

FORCING PRESSES

For straightening shafts or axles; pressing bearings or hubs in or out of wheels; forcing gearings or bushings on or off, or many other such operations. Two sections of 5-inch channel iron blocking 8 inches long; two extension arms to attach to either end of bolster and vise block equipment furnished. Frame width, 32 inches; weight 435 pounds.

Weaver Forcing Press .....Each $80 00
Weaver Forcing Press (42 inches wide).....Each 95 00

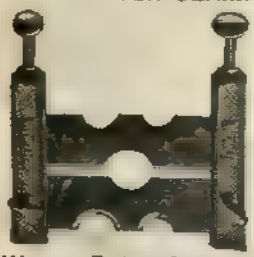
REAR AXLE ATTACHMENT



Designed exclusively for service with the Weaver Forcing Press. Indispensable in the shop doing any amount Ford Repair Work. The side rods are ⅝-inch high carbon stock 36 inches in length. Shipping weight, complete with face plate, 35 pounds; less face plate, 17 lbs.

Weaver Rear Axle Attachment .....Each $9 00
Weaver Rear Axle Attachment Less Face Plate
Each 4 50

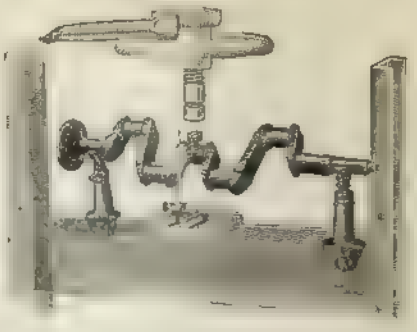
PULLER CLAMPS FOR ARBOR PRESSES



Used to securely clamp and support ball races, gears and other small parts of generators, motors, etc., which cannot otherwise be handled to advantage and with perfect safety. Jaws are made of high quality spring steel, supported within heavy brackets. Adjusted by means of powerful thumb screws.

Weaver Puller Clamp, 9 in. size, wgt. 10 lbs..Each $5 50
Weaver Puller Clamp, 16 in. size, wgt 24 lbs..Each 9.50

TRUING FIXTURES

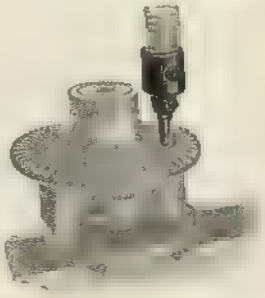


Fixtures hold shaft rigidly in position for straightening.

Can be set at any desired points on bolster of press thereby accommodating shafts of practically any length; fixtures held in place by set screws. Fixtures are adjustable in height making it possible to accommodate shafts of various diameters at points of contact. V Blocks are held rigid by set screws. V Blocks are made of steel, machined on inner surface. Fixtures are built amply strong to meet requirements of work for which they are intended.

Weaver Truing Fixtures Set $10 00

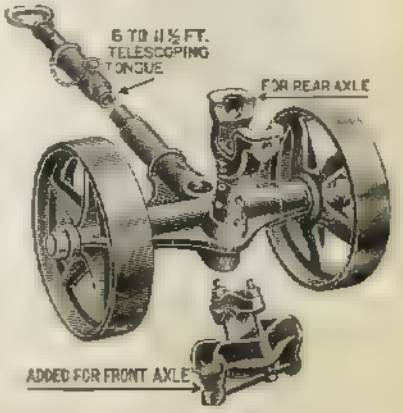
RIVETING TOOL



Will fit any Weaver press screw. Is especially useful in riveting ring gears. Enormous pressure that can be readily exerted insures tight fit and eliminates time and trouble of heating rivets. Heading tool will fit ⅜ and ⅝ inch rivets, is made of high grade tool steel. Heading tools of special size furnished at nominal cost.

Weaver Riveting Tool
Weight 3 pounds. Each $4 50

AUTO AMBULANCES



For transporting disabled automobiles to repair shop; can be quickly and securely attached to either front or rear axle of any car; main frame housing designed with provision for placing standard either in front of ambulance axle or back of it; height of standard may be adjusted; cast steel wheels 14 inches in diameter with 3 inch tires; full length steel axle 1¼ inches in diameter; telescoping tongue is of double strength steel tubing; adjusts every 6 inches to 11½ feet.

Weaver Auto Ambulances; weight 140 pounds. Each $35.00

Weaver Auto Ambulance Rubber Tired, weight, 215 pounds.....Each 65 00

WESTERN GASOLINE EQUIPMENT

BIG GUSHER ROADWAY OUTFIT

Pump—Long Distance Type, adjusted to measure 1, 2, 3, 4 or 5 gallons at a stroke. 9 in Seamless Brass Cylinder; ⅝ in. Brass Piston Rod; Heavy Brass Valves and Stuffing Box; Cut Steel Gears, Bronzed Bushed and protected by Gear Guard; Case Hardened Bearings and Spindles; Normal Capacity 25 Gallons per Minutes.

Quantity Stops—For 1, 2, 3, 4 and 5 gallons are located in front on Pump Standard to change measurements it is but necessary to push in the Nickeled Disc stamped with the quantity desired.

Gallon Meter—Keeps an accurate check of all gasoline drawn up to 99999 gallons at which point it reverts to 00000. Large legible figures stamped in the metal; Built with precision of a watch.

Indicator—Aluminum Etched Dial is attached to Front of Rack Bar, calibrated for every Pint from One Pint to Five Gallons, showing at a glance amount pumped in Pints if stopped between Gallon Buttons.

Finish—Pumps and Cabinets are highly finished in Vermilion Enamel with Gold Lettering and Nickel Trimmings.

Tanks—Galvanized Steel, riveted and soldered, equipped with Double Brass Foot Valves, Double Fill Pipes with Strainer, Lock Cap, Lock and Keys, Measuring Stick to determine number of gallons in Tank and Pipe Unions.

Dimension of Pump—Height 69 in., Height to Top of Discharge Pipe, 99 in.; Height to Top of Electric Lamp, 107 in.; 2 in. Suction Pipe and 1¼ in. Discharge Pipe

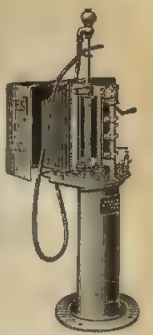
WESTERN ROADWAY OUTFIT



Pump—Long Distance Type, adjusted to measure Gallons, Half Gallons, Quarts or Pints at a stroke; Is built entirely of Metal with Cylinders, Valves, Plunger Rod and Stuffing Box of Brass; Cut Steel Gears, Balance of Pump is Heavy Cast and Wrought Iron; Requires but two and one-half turns of the Handle to discharge a gallon, giving pumping capacity of 12 gallons per minute.

Gallon Meter—Keeps an accurate check on all gasoline drawn up to 9999 gallons, at which point it reverts to 0000, making it a Continuous Meter. Every tenth of a gallon is shown in red figures, so value of oil may be computed in 10ths if sold in small quantities.

Discharge Register—This device automatically tallies every gallon pumped from 0 to 10 gallons and is reversible from any point.

Finish—Pumps and Cabinets are highly finished in Vermilion Enamel with Gold Lettering and Nickel Trimmings.

Tanks—Galvanized Steel, riveted and soldered, equipped with Double Brass Foot Valves, Double Fill Pipes with Strainer, Lock Cap, Lock and Keys, Measuring Stick to determine number of gallons in Tank and Pipe Unions.

Dimensions of Pump—Height 82 in.; Height to Top of Discharge Pipe, 82 in.; Height to Top of Electric Lamp, 100 in.; 1¼ in. Suction Pipe and 1 in. Discharge Pipe.

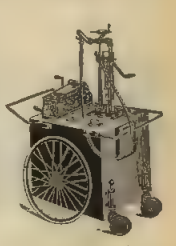
PORTABLE OUTFIT



This Tank is built to withstand the severest possible strain and hard usage a Tank of this description is subjected to, and after reading the following specifications, it will be admitted that we have accomplished our object.

The Tank has a capacity of 50 gallons and is built of ¾-inch Black Tank Steel, all joints being welded under the new process, making the Tank seamless. The Wheel Flanges and connections are made of Forged Steel and welded to the Tank. It is equipped with Steel Wheels having twenty-eight ¾-inch Steel Spokes fitted with Roller Bearings and 1¼-inch Cushion Tires. The Wheels are fitted with Brake, making Tank stationary when filling.

The Pump measures Gallons, Half-Gallons, Quarts or Pints at a stroke; Is equipped with Register that automatically tallies the amount pumped from 0 to 10 gallons, Safety Automatic Shut-off Cock; Locking Device, and six feet of Gasoline Hose with a Special Filling Nozzle. The Pump Cylinder rests in a Cup-shaped Extension on bottom of Tank so that all the gasoline can be pumped from the Tank before refilling.

A Glass-covered Gage on top of Tank shows at all times the exact number of gallons in the Tank, the Brass Dial being graduated for each gallon from 0 to 50. The Glass Face is protected by a Self-closing Spring Cover of polished brass.

The Filler Cap is provided with Inner Tube and Strainer, Ball-valve Air Vents and Locking Device.

The Pumps are finished in Black Enamel with Nickel Trimmings, and Tank is highly finished in Vermilion Enamel with Polished Brass Trimmings, making a very handsome appearance.

By use of the Autographic Register an accurate charge account can be maintained of all gasoline used, as all charges are made in triplicate, original slip goes into locked Slip Box on end of Tank, duplicate to customer and triplicate is wound up on inside of Locked Register, making record of the transaction.

Register is finished in full Nickel and when sent out is loaded with 500 slips in triplicate. This Register and Slip Box are not part of the regular equipment and are only attached when so ordered and at an additional cost.

Inspected, labeled and approved by the National Board of Fire Underwriters.

Prices include Pump and Tank complete with 6 feet of Steel Lined Hose, Hose Nozzle, 10 gallon Discharge Register, Magnetic Float Gage, Wheel Brake, Roller Bearing Steel Wheels with 1¼ inch Cushion Tires.

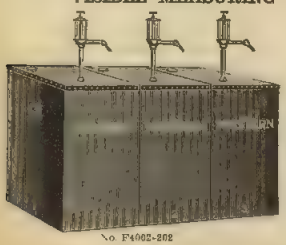
VISIBLE MEASURING PUMPS



No. F4002-202

No. F4002-201

The Visible Measuring Pump is without question the most attractive Pump for converting an ordinary Steel Barrel into a Self-Measuring Outfit. Will fit any regular shipping drum. The Measuring Cylinder is made of heavy clear glass, seated on treated cork gaskets, top and bottom being connected by four stay rods, making it a simple matter to take pump apart.

When Pump is operated the oil is discharged into the Glass Cylinder and all oil in excess of a quart flows back into barrel through overflow pipe, leaving an accurate quart in the Cylinder ready for discharge. Lever on Discharge Nozzle is equipped with Spring Catch and spring must be released before lever can be raised. It requires but 30 seconds to fill and discharge the Cylinder.

Pumps can be furnished complete with three 15-gallon tanks. They are built of heavy steel, welded throughout making them leak-proof and practically indestructible. Tanks are 12½ inches long by 12½ inches wide, by 24 inches high and each unit is fitted with 4 inch Screw Cap for filling and with Handle on each side. Handsomely finished in two coats of Olive Green Enamel. Tanks can be furnished with each unit mounted on a truck fitted with three Ball Bearing Swivel Casters.

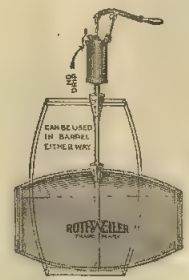
BARREL PUMPS



ROTHWEILER

For Oils, Gasoline, Turpentine, Light Paint, etc.; Can be used through Head or Side of Barrel as shown

The adjustment and fastening consists of a long tapered Wooden Plug which will fit any size hole from 1½ to 3 in. When the Plug is driven in the Barrel it wedges the Barrel fastening and at same time clamps the adjustment. One operation performs both functions. All parts are interchangeable. Pump works smoothly and easily and will draw fully one quart at each stroke. It also drains Barrel thoroughly

Each

No. P4002A9—Fitted with Non-Drip Spout which is turned up when not in use; Pump is finished with two coats of Black Paint.....$25.00

MILWAUKEE

Self Measuring

Converts ordinary Steel Barrel into a Self-Measuring Outfit for Oils or Kerosene, Not used for Gasoline Pump is made especially for Non-Volotile Liquids.

Three Measuring Adjustable Stops, May be sealed by one seal; Turn of a Small Lever enables one to measure accurately a Quart, Pint or Half Pint of Oil; Spring Lock prevents tampering, or drawing of Oil by unauthorized persons.

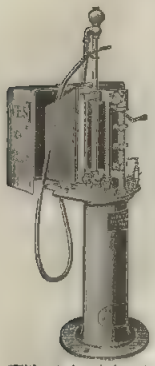
Each

No. P4002A—Steel Cylinder; Leather Plunger; Adjustable Stops; Non-Drip Faucet Lock with Two Nickel Plated Keys $40.00

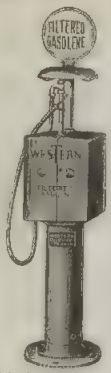
One in Case; Weight 25 Lbs. Each

GASOLINE OUTFITS

WESTERN ROADWAY FILLING OUTFIT



(Without electric lamp)



(With electric lamp)

Tanks and pumps are tested, labeled and approved by the National Board of Fire Under-writers.

Equipment is guaranteed by the manufacturers against any defect in material or workmanship for a period of three years.

Cabinet—Built of 1/16 inch iron, with overlapping weather proof doors, with Corbin six-tumbler lock; door at bottom of pedestal giving access to drain cock of filter chamber and pipe union.

Pump—Long distance type, measuring gallons, half gallons, quarts or pints at one stroke; is made entirely of metal, with cylinder, valves, plunger rod and stuffing box of brass; cut steel gears; remainder of pump of heavy cast and wrought iron.

Gallon Meter—Keeps accurate check on all gasoline drawn up to 9999 gallons at which point it reverts 0000. Every tenth of a gallon drawn is shown in red figures during operation of pump.

Gravity Filter—Is attached below pump cylinder. Strains gasoline from water and other impurities, which gravitate to settling chamber and are drawn off through drain cock at bottom.

Discharge Register—Automatically tallies every gallon pumped from 0 to 10 gallons and is reversible from any point.

Independent Discharge Nozzle—Pump is fitted with discharge openings on either side, one for attaching hose, the other for filling cans. The can filling cock is attached to swivel coupling and when not in use is swung back out of the way.

Hose and Filling Nozzle—The 1 inch discharge pipe extends 20 inches above pump and terminates in a automatic air vent valve that allows the oil in the hose to drain, to this vent fitting is attached 8 feet of 1 inch steel lined hose with brass filling nozzle.

Automatic Door Stop—Holds door rigid while operating pump.

Removable Pump Handle—Can be slipped off, making pump fool and meddler proof.

Quantity Stops—Located in front on pump standard, to change measurements, it is but necessary to push in the disc stamped with the quantity desired, give one stroke of the handle and the exact amount is obtained.

Finish—Pump and cabinet are highly finished in vermilion enamel with gold lettering and nickel trimmings.

Tanks—Galvanized steel, riveted and soldered, equipped with double brass foot valves, double fill pipes with strainer, lock cap, lock and keys, measuring stick to determine number of gallons in tank and pipe unions.

(See next Column.)

GASOLINE OUTFITS

WESTERN ROADWAY FILLING OUTFIT

(Continued from preceding column)

Dimensions of Pump—Height to top of cabinet 52 inches; height to top of discharge pipe 82 inches; height to top of light receptacle 100 inches; width open 24 inches; width closed 15½ inches; depth 11 inches; diameter of pedestal 8 inches; diameter of base 14 inches.

Outfit consists of pump and tank, complete with fittings but without pipe.

STEAM HEATING FOR RAILWAY VEHICLES, STEAMSHIPS, BUILDINGS, Etc.

Westinghouse Patents.

Before the introduction of the Westinghouse System of Heating the usual practice was to utilise steam at a considerable pressure in the heaters. This practice was subject to many disadvantages, which were realised as the heating of railway carriages extended; and the Westinghouse System of heating by steam at atmospheric pressure was introduced to get rid of these.

Immediately it was introduced, the Westinghouse System showed the great advantages to be gained by its use; and the satisfaction which it has since afforded to the Railway Companies using it is shown by the remarkable annual increase in the number of railway carriages equipped with it, as well as by the number of additional Companies adopting it each year.

Avant l'apparition du système de chauffage Westinghouse on employait généralement pour le chauffage de la vapeur à une pression considérable. Ce système présentait de nombreux désavantages dont on s'est rendu compte lorsque le chauffage des voitures de chemins de fer commença à prendre de l'extension. C'est alors que le système de chauffage Westinghouse par vapeur sous pression atmosphérique fut introduit et remédia à tous les systèmes employés précédemment.

Dès son apparition, le système Westinghouse a prouvé les avantages qu'on pouvait réaliser par son emploi; et la satisfaction des Compagnies de chemins de fer qui l'ont employé est prouvée par la remarquable augmentation annuelle du nombre de voitures de chemins de fer munies de ce mode de chauffage, aussi bien que par le nombre de compagnies de chemins de fer qui l'adoptent tous les ans.

Ambulance Train of 16 coaches equipped throughout with Westinghouse Heating.
Train sanitaire de 16 voitures entièrement pourvu du système de chauffage Westinghouse

The Westinghouse System is notable for its simplicity, in consequence of which there are few pipe connections required; and the cost of installing the apparatus is extremely low, while the minimum of expense is required for maintenance.

Carriages fitted with this system can be run in trains, of which the remaining vehicles are equipped with any other system of heating using a main pipe to convey steam under pressure throughout the train; the standard couplings being used.

Many thousands of Westinghouse Heaters are now in use on all types of passenger vehicles on railways in Europe, Asia, Africa, and America in several cases in countries where the climate is one of the coldest in the world—and they have given entire satisfaction to the users. Trains fitted with this system have been exposed to a temperature of 36° F. below zero.

Le système Westinghouse est remarquable par sa simplicité, par le petit nombre de raccords de tuyaux nécessaires; la dépense d'installation de l'appareil est extrêmement minime et les frais d'entretien sont très réduits.

Les voitures munies de ce système peuvent faire partie de trains comportant d'autres voitures pourvues d'un autre système de chauffage et employant une conduite principale pour amener la vapeur sous pression dans toute la longueur du train, en faisant usage des accouplements normaux.

Des milliers d'appareils de chauffage Westinghouse sont actuellement en usage dans tous types de voitures pour voyageurs sur les lignes de chemins de fer d'Europe, d'Asie, d'Afrique et d'Amérique—en plusieurs cas dans des pays où le climat est un des plus froids du monde entier—et partout ces appareils ont donné satisfaction complète. Certains trains munis de ce système ont été exposés à une température de —36° C.

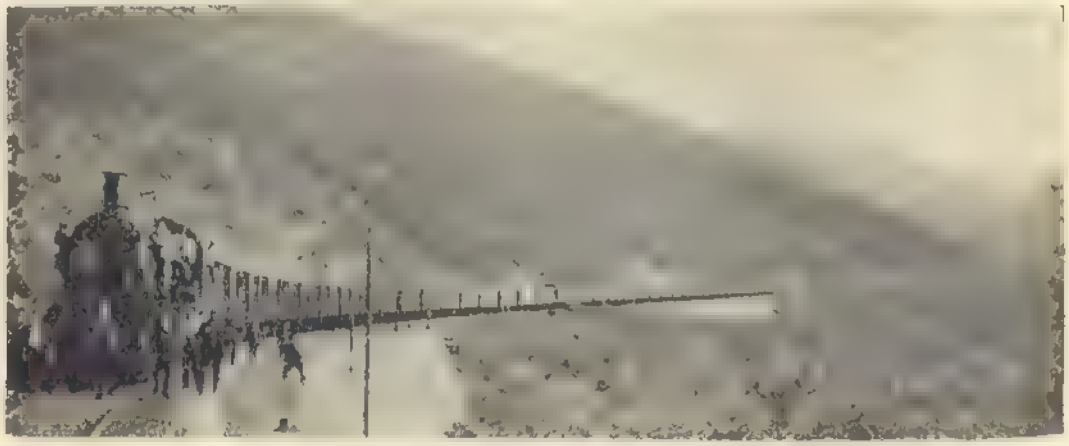
The Westinghouse Automatic Brake.



**Goods train of engine and 75 cars on the Hungarian State Railways fitted with the Westinghouse Automatic Brake with Non-Auto control.
Gradient of 1 : 40 over a distance of 24 miles.**

*Train de Marchandises du chemin de fer de l'Etat hongrois composé de la locomotive et de 75 wagons, munis du frein automatique Westinghouse, avec Contrôle Non-Auto.
Déclivité de 25 o/o sur 38 kilomètres*

For nearly half a century The Westinghouse Brake Co., Ltd., and its Associated Companies, have closely followed the developments in transportation, looking towards the safe and efficient handling of railway traffic under all conditions of service, and every problem presented to them has received careful study by their experts, based on the experience gained by them on railways throughout the entire World.

For every class of railway service:

High Speed;
Ordinary Passenger Trains;
Suburban Traffic involving frequent stops;
Long and Heavy Goods Trains;
Descent of Gradients, etc.,

appropriate brake apparatus is available, and the practical knowledge of the Companies' experts is always at the disposal of Railway Officials and other interested parties.

Pendant près d'un demi siècle la Société Westinghouse Brake Co. Ltd., et ses sociétés associées ont suivi de près le développement des moyens de transport, et ont concentré leur attention sur les questions de sécurité et de fonctionnement efficace des transports par chemins de fer sous toutes les conditions de service; et tous les problèmes qui leur ont été posés ont fait l'objet d'études des plus soigneuses, basées sur l'expérience acquise par leurs experts en matière de chemin de fer dans le monde entier.

Pour tous genres de transports par chemins de fer:

Rapide
Trains de voyageurs ordinaires;
Trains de banlieue sujets à de fréquents arrêts
Trains de marchandises longs et lourds
Descentes de plans inclinés, etc.,

il a été imaginé un frein approprié, et les connaissances pratiques des experts de la Compagnie sont toujours à la disposition des administrateurs d'entreprises de chemins de fer ou de toutes personnes intéressées

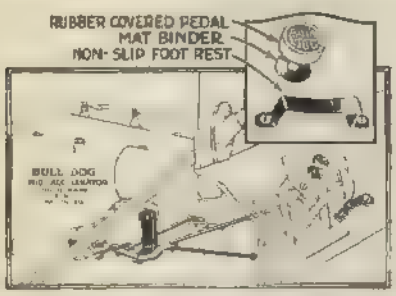
ACCELERATORS AND CARBURETORS

WILLIAMS FOOT ACCELERATOR

Has only three connections—hand throttle toeboard and carburetor lever. Each accelerator is adjusted at the factory. It can be removed and replaced in a few seconds without altering the original adjustment. The pedal projects through a small slit in the floor mat. Direct action on the carburetor is obtained without the use of ball-and-socket joints levers and other complicated devices. See illustration. The spring action which closes the foot throttle does not operate against the hand throttle. Best grade materials used throughout; no parts to work loose. Installation diagram and instructions printed on each box.

Williams Foot Accelerator . . . . . Each $3 00

"BULL-DOG" FOOT ACCELERATOR



Not a cheap takeoff, but a real article built for service and satisfaction. Don't make the mistake of buying the cheapest when you can obtain "BULL DOG" SATISFACTION for a few cents more; Simple in construction, easily installed, does not interfere with hand throttle or with removal of floor boards, all parts are steel, heavily japanned in black, and packed in neat carton.

Bulldog Foot Accelerator Each $1 50

PET COCK WRENCH

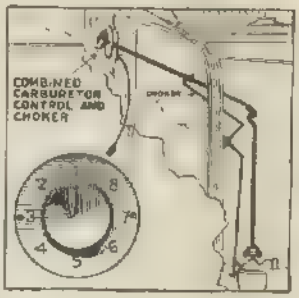
For Fords

A handy device for conveniently opening the pet cocks on Ford crank case for draining or determining oil level.

Pet Cock Wrench Each $0 50

CARBURETOR CONTROL AND CHOKER

For Fords



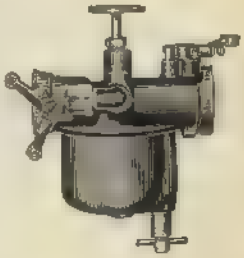
A device that answers two purposes, adjusting or choking the carburetor to facilitate easy starting. Replaces the old choker equipped on Ford instrument board. It only requires a few minutes to attach this device.

Carburetor Control and Choker. Each $1 50

HOLLEY CARBURETOR

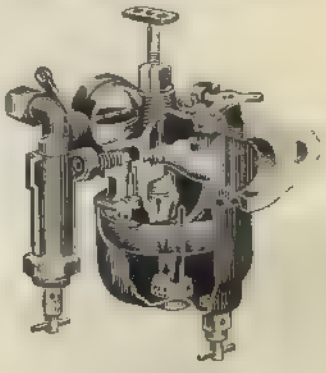
For Fords

The model N. H. Holley carburetor is very efficient; is used as equipment on Ford T cars. It is equipped with primary air passage in addition to intake shutter so designed as to insure easy starting. Inlet needle seat is removable and can be replaced in few seconds. Special alloy needle and metal float are not affected in any way by the impurities in present day gasoline.



Holley Carburetor Model N. H Each $7 50

KINGSTON CARBURETORS



For Fords

Specially designed for Ford users. Has many exceptional features, including a gasoline strainer, an integral part of the device. In these days of constantly lowering fuel values the need of strainers is apparent, and the addition will be appreciated by all Ford users.

Model L4S Ford Special Kingston Carburetors; complete with New Idea fuel separator and warm air collection, weight 5 ½ pounds. . . . . Each $7 50

Model L4—Ford Special Kingston Carburetors; without fuel separator, weight 3 pounds . . Each 6 00

ALARM CLOCKS

EIGHT DAY MARATHON
Automatic Alarm

Eight Day Marathon Automatic Alarm rings until shut off by means of Push Button on Back of Clock; Switch releases automatically so Clock rings at same hour the following morning; Has Shut-Off Switch for use when alarm is not wanted

Movement has Steel Pinions and Heavy Brass Plates. There is spring power to run it for 14 days. Has almost silent beat; Heavy Seamless Brass Oval Case; 4 in. Gong Bell on Back; Arabic Numerals, Fancy Pierced Hands; Attractive Top Ornament

Height 8 in., Width 6 in., 4½ in. Dial

	Each
No. 3075A-B—Lemon Brass	$8.20
No. 3075A-C—Burnished Copper	8.20
No. 3075A-S—Satin Silver	8.20

One in Box, Weight 2¾ Lbs. Each; 24 in Case, Weight 94 Lbs. Case

WIRELESS CALL

One Day Continuous or Intermittent Alarm; Switch on Top of Clock sets alarm to ring continuously for five minutes or intermittently in 20 second intervals for 15 minutes

Seamless Brass Case, Solid Brass Movement with High Polished Bearings of Hard Pinion Steel; Large Dial; Plain Arabic Numerals which are easily read; Fancy Pierced Hands; Ornamental Top

Height 7⅛ in., Diam. 5¼ in., 4½ in. Dial

	Each
No. 3075B-B —Lemon Brass	$5 40
No. 3075B-C —Burnished Copper	5 40
No. 3075B-F —French Bronze	5.40
No. 3075B-N —Nickel Plated	5.20
No. 3075B-S —Satin Finish	5.40

One in Box, Weight 1⅞ Lbs. Each; 24 in Case, Weight 86 Lbs. Case

JUMBO WIRELESS

One Day Intermittent Alarm; Rings intermittently every 20 seconds for 15 minutes; A large Clock in an exclusive design.

Case made of Seamless Brass; 4 in. Full Metal Gong on Back; Fancy Pierced Hands, Roman Dial.

Height 8 in., Diam. 6¼ in., 4¼ in. Dial

	Each
No. 3075C-B —Lemon Brass	$5 70
No. 3075C-C —Burnished Copper	5 70
No. 3075C-F —French Bronze	5 70
No. 3075C-S —Satin Finish	5 70

One in Box, Weight 2¼ Lbs. Each; 24 in Case, Weight 86 Lbs. Each

THE WIRELESS

One Day; Alarms intermittently every 20 seconds for 15 minutes; Shut-off Switch on Top of Case.

Seamless Case; Ornamental Top, Fancy Pierced Hands and Roman Numerals; 4 in. Gong on Back.

Height 6¾ in., Diam. 3¼ in., 4¼ in. Dial

Nos.	Each
3075D-B—Lemon Brass	$4.70
3075D-C—Burnished Copper	4.70
3075D-F—French Bronze	4.70
3076D-S—Satin Silver	4.70

One in Box, Weight 1¾ Lbs. Each; 50 in Case, Weight 110 Lbs. Case

BABY CALL

Baby Call is a smaller model of Wireless Call; Has dependable time-keeping qualities and is a neat, trim, little Clock for Dresser, Shelf or Night Stand.

Switch on Top of Clock sets alarms to ring for five minutes or intermittently in 20 second intervals.

Height 4 in., Diam. 3 in., 2¼ in. Dial

Nos.	Each
3076E-B—Lemon Brass	$5.40
3075E-C—Burnished Copper	5.40
3075E-F—French Bronze	5.40
3075E-N—Nickel Plated	5.20
3075E-S—Satin Silver	5.40

One in Box, Weight ½ Lb. Each; 50 in Case, Weight 50 Lbs. Case.

JUNIOR WIRELESS

With 2½ in. White Porcelain Dial

A small model of the Jumbo Wireless; **One Day Intermittent;** Rings intermittently every 20 seconds for 15 minutes.

Case made of Seamless Brass, Fancy Pierced Hands and Arabic Numerals.

Height 5 in., Diam. 4 in., 2½ in. Porcelain Dial

Nos.	Each
3075F-B—Lemon Brass	$5.40
3076F-C—Burnished Copper	5.40
3075F-F—French Bronze	5.40
3075F-N—Nickel Plated	5.20
3075F-S—Satin Silver	5.40

One in Box, Weight 10 Oz. Each; 24 in Case; Weight 48 Lbs Case

BABY WIRELESS

A small model of the Wireless Clock; For Travelers use; With intermittent light sounding alarm, Shut-Off Switch on Top

Seamless Case, Ornamental Top, Fancy Pierced Hands and Roman Numerals; 2 in. Metal Gong on Back.

Height 3½ in., Diam. 2 in., 2 In. White Dial

Nos.	Each
3075H-B—Lemon Brass	$5.00
3075H-C—Burnished Copper	5.00
3076H-F—French Bronze	5.00
3075H-S—Satin Silver	5.00

One in Box, Weight ½ Lb. Each; 50 in Case, Weight 50 Lbs Case.

ALARM CLOCKS

EXCELLO

With 2 in. White Porcelain Dial; One Day Continuous Long Alarm; With Shutoff Switch on Back; Seamless Brass Case, Neat Globe design; Ornamental Stationary Top, Fancy Pierced Hands

Height 4½ in., Width 3¼ in.
2 in. White Porcelain Dial

	Each
No. 3086A-B —Lemon Brass	$5.00
No. 3086A-C —Burnished Copper	5.00

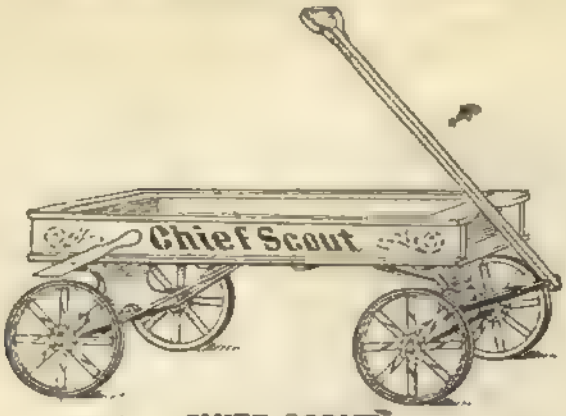
WOOD COASTER WAGONS



CHIEF SCOUT

Box, platform and bolsters are made from best quality hardwood, removable box rim. Pressed steel hubs. Eight ⅝ inch hardwood spokes. Felloes are made of ¾ x ⅞ inch tough Wisconsin rock elm and the tires are of ¾ x ⅛ inch band steel, electric welded and set by hydraulic press and drilled and fastened by four special made clincher nails. Roller bearings consist of eight pieces of ⅞ inch cold rolled steel shafting and are built into the hub. Rollers are held in place by 12 gauge washers. The barrel in the hub acts as an oil retainer and rollers are easily lubricated. Wheels are painted red with yellow and black striping. Box is painted yellow with red and black striping. All iron work enameled black.

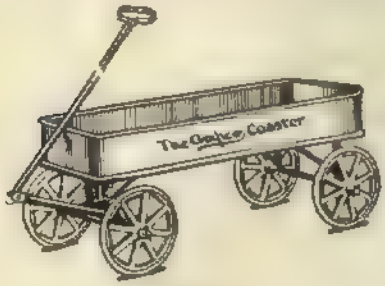
STEEL COASTER WAGONS



AMPCO

Box and wheels are japanned vermilion red, other parts are black, high gloss finish. No bolts, nuts or screws are used, six cotter pins all that is necessary to assemble a wagon. Wheels have rubber tires and roller bearings.

The box is made of 22 gauge steel reinforced by a ¼ inch rod at top. The box is easily removed from platform. The wheels are 9 inches in diameter, the axles are of ½ inch steel. These coasters are strong, easily assembled, easy running and noiseless. They are packed, knocked-down, in dust proof carton. Shipping weight 31 pounds. Full directions for assembling accompany each wagon.

Ampco Coasters. All steel construction, full height 14¼ inches; box is 5 inches high, 13 inches wide, 32½ inches long.....each, **$10.00**

EXPRESS WAGONS

20TH CENTURY COASTER

Has sheet steel body, beaded; kiln dried wood bottoms, with cross cleats; steel gears, wire wheels, front and rear wheels same size; body red enameled outside, green inside, stenciled in gold; gears and wheels baked black enamel; natural hardwood handle. Both front and rear gears and all braces made of wide heavy steel. The stability of the front gear is greatly increased by the improved fifth wheel construction. The pulling strain through the draw iron is now direct on the front axle; rear gears equipped with three strong steel braces with bottom board reinforced with hardwood cross cleats with bolts passing through braces, cleats and bottom of box. Steel axles of proper size to withstand hard usage.

WHITE MASONS' TAPE

Rubberized Fabric, ¾ in. Wide, Similar to Tire Tape.

White Mason tape is used for wrapping the fingers and hands of stone masons, bricklayers, mechanics and kindred trades. Is also used for wrapping tool handles, baseball bats, etc.

The strong friction, wearing and insulating qualities of this tape, together with its light color, makes its particularly adapted for interior work in the electrical line.

No. 2½—½ lb. roll, w't per doz. 3 lbs., per dozen $3.60

ONE ROLL IN A CARTON; 100 LBS. IN A CASE

AXE RACKS

Can be used on the counter or on the wall by supporting with brackets. For counter use a fine display can be made by placing two racks back to back. The rack is ornamental and attractive, and will save its cost by keeping axes off the floor, away from the dirt and sprinkler.

No. F15 Briggs—Semi-circular, hard wood, painted red, base 22½x11½ in., height 13 in., holds up to sixteen handled and sixteen unhandled axes, w't each 16 lbs., **each★** $7.50

ONE IN A FIBRE SHIPPING CARTON

NOTE—We do not give away Axe Racks as premiums.

Nous sommes les [illegible] fabricants de lampes de mineurs [illegible]

Lampes de toutes sortes—électriques, acétylène et à benzine

Pour les accumulateurs électriques, voir la Série Electricité

WE ARE THE LARGEST LAMP MANUFACTURERS IN THE EMPIRE.

Every description of Lamps—Electric, Acetylene and Paraffin

For Electric Accumulators see Electric Series

Somos los constructores de lámparas en mayor escala en el Imperio

Toda clase de lámparas—eléctricas, acetileno y de parafina.

Para Acumuladores eléctricos véase la Serie Electricidad

LES NOUVEAUX ACCUMULATEURS "ALKLUM"

Ne contiennent pas d'acide.
Ne contiennent pas de plomb.
Ne craignent pas de fondre en cas de charge.
Peuvent être employés pendant la somme complet d'ampères-heures.
Ne peuvent pas être endommagés par un excès de charge.
Durent dix fois plus longtemps que les accumulateurs en plomb.
Les plus légers du monde.
Le voltage se maintient pratiquement à la même pression pendant tout le temps que la batterie est employée, de manière que la lumière ne baisse pas.
Sont vendus avec la garantie qu'ils sont supérieurs à n'importe quel autre accumulateur du monde entier.

THE NEW ALKLUM ACCUMULATORS

Contain no Acid.
Contain no Lead
Have no Celluloid Case
Can be run down the full amount of ampere-hours.
Cannot be hurt by over charging
Have ten times the life of lead accumulators
And are the lightest in the world
The Voltage is maintained at practically the same amount all the time the battery is being used, so that when used for lighting the light does not diminish

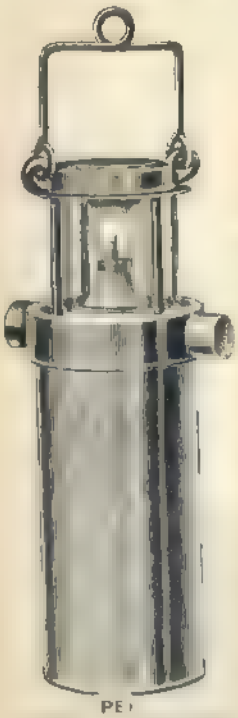
Sold with a Guarantee that they are superior to any other in the world.

LOS NUEVOS ACUMULADORES "ALKLUM"

No contienen ácido.
No contienen plomo.
No [illegible]
Pueden descargarse por [illegible] amperes horas.
No [illegible]
Tienen [illegible] vida que los acumuladores de plomo.
Y son los más ligeros en el mundo.
El voltaje se mantiene en su totalidad por así decir, durante todo el tiempo que la batería está en uso, para que la luz no disminuya.

Se venden con una garantía de que son superiores á [illegible]

WORSNOP PATENT ELECTRIC MINER'S LAMP.



PE)

APPROVED BY THE BOARD OF TRADE.

Sec. 33 of the Coal Mines Act, Statutory Rule, 1915, No. 249.

Price **36/-.**

Absolute Safety. Absolute Certainty.

The Worsnop Patent Safety Lamp is the latest invention and the last word in Electric Miner's Lamps.

It is both the strongest and lightest Electric Miner's Lamp made for the power of light given

It is less liable to get out of order than any other system.

Will last TEN TIMES as long as lamps containing the old-fashioned lead Accumulators.

The accumulator is guaranteed to maintain its efficiency for FOUR YEARS, but experiments show that it will probably be quite good at the end of TEN YEARS and even much longer.

LAMPE ÉLECTRIQUE BREVETÉE "WORSNOP" POUR MINEURS.

Modèle approuvé par le Conseil du Commerce

Section [illegible] of the Coal Mines Act, Statutory Rule, 1915, No. 249.

Prix: Frs. 45 pièce.

Securité absolue.
Certitude absolue

La lampe de sûreté [illegible] dernier mot en matière de lampes de mineurs électriques.

Elle est en même temps [illegible] légère de toutes les lampes de mineurs, relativement à la puissance d'éclairage qu'elle possède.

Elle est moins sujette à se détraquer que tout autre système.

[illegible] durera dix fois plus longtemps que les accumulateurs [illegible] ordinaires, et [illegible] très bon état après 10 ans de service et même davantage.

COOKSON & COMPANY, LIMITED,

Newcastle-on-Tyne and London,

Manufacturers of Lead and Antimony in all forms.

Fabricants de Plomb et d'Antimoine sous toutes ses formes.
Fabricantes de Plomo y Antimonio en todas sus formas.

Cookson's Assayers' Refined Powdered English Litharge "Crescent" C&C Brand.

(T!)

Wherever Assayers' Litharge is used, our Brand is essential. It is extremely pure and fine in texture. In particular it is manufactured by special processes, so that it shall contain a minimum possible quantity of precious Metals.

Our Assayers' Litharge is guaranteed to contain less than 5 grains of Silver to the ton and no Gold. Such material can be absolutely relied upon to give consistent results.

Packing.—This Litharge is usually packed in 1 cwt. (50 kilos) kegs, or smaller sizes if required.

Quotations.—Vary with the Lead market, and are always as reasonable as is consistent with the extra cost of producing material of such extreme purity.

La Litharge Anglaise Pulverisée et Raffinée de Cookson pour Essayeurs, Marque C&C "Crescent."

Dans tous les cas où la Litharge pour essayeurs est employée, notre marque est indispensable. Elle est d'une pureté très élevée, et d'une texture très fine. Notre procédé special de fabrication fait qu'elle ne contient que la quantit. minimum possible de metaux precieux.

Nous garantissons que notre Litharge pour Essayeurs contient moins de 1 3 d'un gramme d'argent par tonne et point d'or. Un tel produit ne peut que donner les resultats les plus satisfaisants

Emballage: Généralement en Barils de 50 kg., ou d'autres plus petits si on le désire.

Prix. Nous cotons suivant les fluctuations au Marche des Plombs, et nos prix sont aussi moderes que possible, vu les frais exceptionne's de production d'une matiere d une telle purete.

El Litargirio Inglés Pulverizado y Refinada para Ensayadores de la Casa Cookson, marca C&C "Crescent."

Por doquiera se usa el Litargirio para Ensayadores, el de nuestra marca es indispensable. Es de una pureza y fineza inmejorables. Nuestro procedimiento especial de fabricacion hace que dicho metal no contenga mas que la cantidad minima posible de metales preciosos.

Garantizamos que nuestro Litargirio para Ensayadores contiene menos de 1 3 de gramo de plata por tonelada, y de oro ni una triza. Es pues un producto mereciendo la mas completa confianza en cuanto a sus resultados.

Se expide en barriles de 50 Kgs., 6 en otros mas pequeños si así se desea.

Precios.—Cotizamos éstos segun las fluctuaciones del Mercado de Plomos, y visto los gastos excepcionales en la elaboracion de un producto de tanta pureza—nuestros precios siempre se hallaran muy módicos.

COURT MARKERS

Put in any powdered material, such as marble dust, airslacked lime, plaster of Paris, or ground plaster, such as is used for fertilizing purposes. By sprinkling immediately after marking, or by marking at evening before the dew falls, the lime is rendered more permanent. Fill the wheel about two-thirds full, which is sufficient for once marking the court.

TENNIS RACKETS

WRIGHT AND DITSON'S

Wright & Ditson rackets weighing 13 oz. and over are guaranteed by the manufacturers for 30 days after date of purchase. Rackets on which claim of defect is made must be forwarded for inspection and all transportation charges paid by the sender.

Used by National Champions and prominent players throughout the country. The frame carefully selected for playing quality and balance. Has green binding and trimming on the throat, 5½-inch handle. Long and narrow shape especially adapted for stroke players and for overhead work; handle is the same size throughout playing surface, which gives the player the same grip when playing from back of the court as at the net.

No. 37—Gold Star, in weights 13½, 14 and 14½ oz. .....each $18.00

Named in honor of the famous Davis Cup. Made of choicest materials especially selected, oval in shape, dogwood re-inforcement and black walnut laminated concave throat, single stringing, 5½ in. handle.

No. 35—Davis Cup, in w'ts 13½, 14 and 14½ oz. .....each $18.00

Oval shape with concave white dogwood throat; frame made of well seasoned second growth ash in the new style chamfering, making a fine appearing and durable racket; double center stringing. Red, white and blue binding where strain in playing comes on frame. 5½-inch handle.

No. 34—All American, in weights 13½, 14 and 14½ oz. .....each $11.00

Strung with good quality gut, extra center strings, shoulders reinforced, beveled frame, light cherry throat. Very practical racket for medium price. In light, medium and heavy weights.

No. 21—Champion .....each $8.00

This racket has for a long time been one of the most popular among the medium priced rackets. Strung with good quality gut bound at shoulders and on frame where the strain comes. Made in light, medium and heavy weights.

No. 23—Longwood .....each $8.00

Frame made of selected white ash, mahogany throat. Strung with good quality gut, extra strings in center. Reinforced at shoulders with binding. Made in light, medium and heavy weights.

No. 26—Park .....each $4.00

Very popular low priced racket with extra center strings, well finished throughout. Light, medium and heavy weights.

No. 27—Hub .....each $3.50

TRADE MARK

Quarts	1	2
Per dozen	$3.60	4.85
Weight per dozen, pounds	7	9½

Three dozen in a case

*PEANUT ROASTERS AND CORN POPPERS

IMPROVED NICKEL MINT

Equipped with two large power springs, located in body of machine, and affords ample power to operate both the peanut and popcorn cylinders at one time with ease, and without frequent winding.

The hopper cylinder has capacity of 3½ bushels per hour and peanuts can be dumped into drawer beneath when roasted without removing cylinder; a mixer insures evenness in roasting. Corn is popped in rotary popper which pops every kernel that can be popped. Raw corn is fed into the back end of drum and as it pops it is automatically ejected into showcase. Unpopped corn can be dumped by reversing the motion of the drum, without removing it from its position; is equipped with a boiler for warming peanuts, generator under boiler, long burner under peanut cylinder and five prong burner under popper. Has finished oak case, with glass partitions and sliding door for each compartment; hot peanuts on one side and flaked corn on other side. Painted in maroon and black, with gold lettering. "Buttered Popcorn" on one side, "Fresh Peanuts" on other side.

With steel axles, steel springs and wire wheels.

Length	45
Width	34
Height to top of dome inches	56
Height to top of tank, inches	71
Show case, popcorn part, inches	18¼ x 13½ x 20

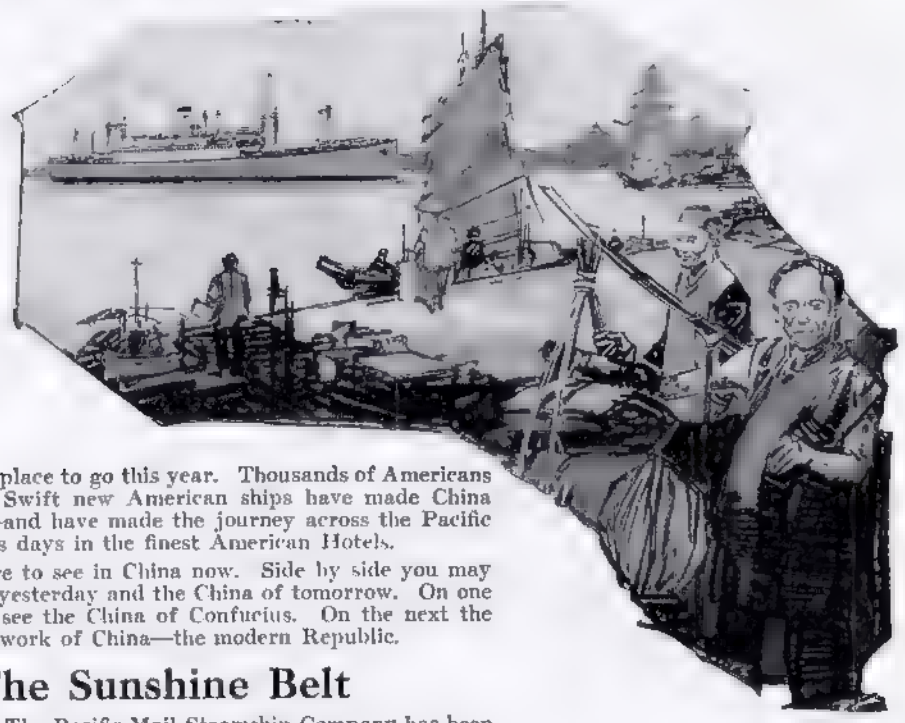
This is the Year to see China



CHINA is the place to go this year. Thousands of Americans are going. Swift new American ships have made China more accessible—and have made the journey across the Pacific as comfortable as days in the finest American Hotels.

There is more to see in China now. Side by side you may see the China of yesterday and the China of tomorrow. On one corner you may see the China of Confucius. On the next the undeniable handiwork of China—the modern Republic.

The Sunshine Belt

For 73 years The Pacific Mail Steamship Company has been known in every port on the Pacific. Their service is unexcelled.

Now under their direction, new Government-owned ships have broken the speed record on the Southern route. The ships sail from San Francisco to Hawaii, Yokohama, Kobe, Shanghai, Hongkong, and Manila over the "Sunshine Belt." Stop-overs in any Eastern country may be arranged. A day's stop is made at Honolulu, giving the traveler sufficient time to see its picturesque life, to visit the beach at Waikiki, and view the near-by scenic wonders. Remember that this is the direct route to Japan and the Philippines, as well as to China. Every stateroom is on the outside. Beds have taken the place of berths. Running water, electric fans, electric radiators, and bed reading lamps equip each room. Most of the rooms have private baths.

You should know more about it. If you will send the information blank you will receive full particulars and descriptive literature. Address U. S. Shipping Board, Information Division 1551, Washington, D. C. If you cannot go abroad, clip the coupon anyway and urge some friend who may go to send it in. You will help to build your Merchant Marine.

For information in regard to sailings and accommodations, address

The
SINGLE-SIX
COUPE

ASK THE MAN WHO OWNS ONE

With the advent of the Single-Six, Packard brought about a complete reversal of fine-car manufacture.

Instead of limited production, Packard now applies the sound principles of larger production, and its resulting economies, to a car of the very highest quality.

Instead of high manufacturing costs, and lower values in the product, it accomplishes lower manufacturing costs, and far higher values in the product.

It is safe to say that no plant in the world, producing a car of Packard's quality, could go farther in this direction.

The Packard organization is skilled and experienced in the finest kind of work. Packard precision-machine equipment is not excelled.

Working to the high Packard standard of excellence, but on a basis of costs now analyzed and budgeted almost to the penny, Packard is enabled to embody in the Single-Six a height of value hitherto unattained in the field of fine cars.

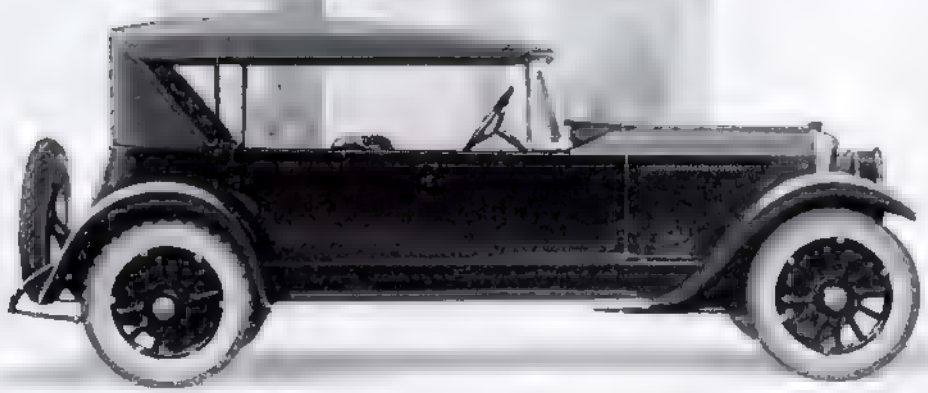
Five-Passenger Touring, $2485; Seven-Passenger Touring, $2685; Runabout, $2485; Sport Model, $2650; Coupe, $3175; Five Passenger Sedan, $3275; Seven-Passenger Sedan, $3525; Five-Passenger Sedan Limousine, $3325; Seven-Passenger Sedan Limousine, $3575; at Detroit

The Packard Twin-Six provides a quality of motoring beyond which it is not possible to go. Truck users know there is profit in hauling with Packard Trucks. All Packard upkeep is made still more economical by Packard standardized service

PACKARD

PAIGE

The Most Beautiful Car in America



Master of the Highway

Under the hood of the Paige 6-66 is a mighty 70-horse-power engine that performs its work with the ease and smoothness of a giant turbine. This vast reserve power means not only great performing ability but long life and uninterrupted service.

Remember, that the Paige 6-66, Daytona model, holds every world's stock chassis speedway record from 5 to 100 miles. Here is proof not only of superb performance but heroic strength and stamina.

You should ride in the Paige to learn the zest of ample power and perfectly balanced chassis construction. Then you will at once notice the benefits of 131 inches of wheel base and 61 inch rear springs.

And if you should desire to own one as you undoubtedly will—there is a pleasant surprise in store. For the Master of the Highway is now yours for $2195.

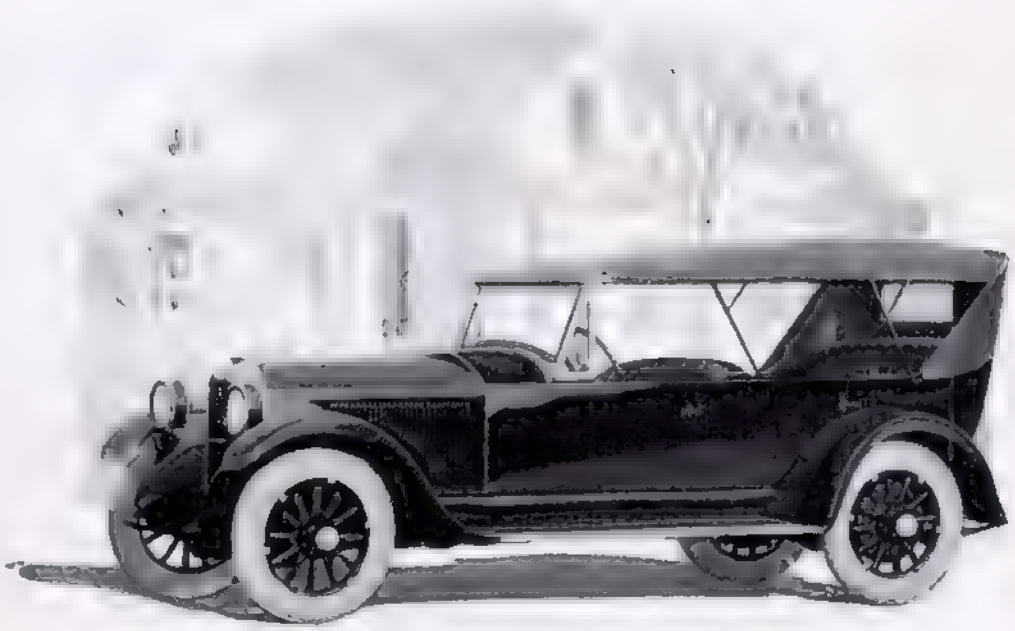
PAIGE

The new Series Paige 6-66 Enclosed Models are superbly beautiful examples of the coachmaker's art. They offer every luxury and convenience that the most discriminating motorist could desire.

And, most important of all, they promise years of care-free service with a world famous chassis that is the last word in six-cylinder engineering.

If you would know enclosed car motoring at its best, we recommend one ride behind the giant 70 horsepower engine which has practically banished vibration at any and all driving speeds. Won't you take that ride in the Sedan or Coupe at your first opportunity?

THE MOST BEAUTIFUL CAR IN AMERICA



The Master Now Costs $2195

The mighty 70 horsepower motor of the Paige 6-66 means absolute command of the Highway.

With its 131 inches of wheel base it matches in size as well as power those cars for which you have been accustomed to pay from $4,000 to $5,000.

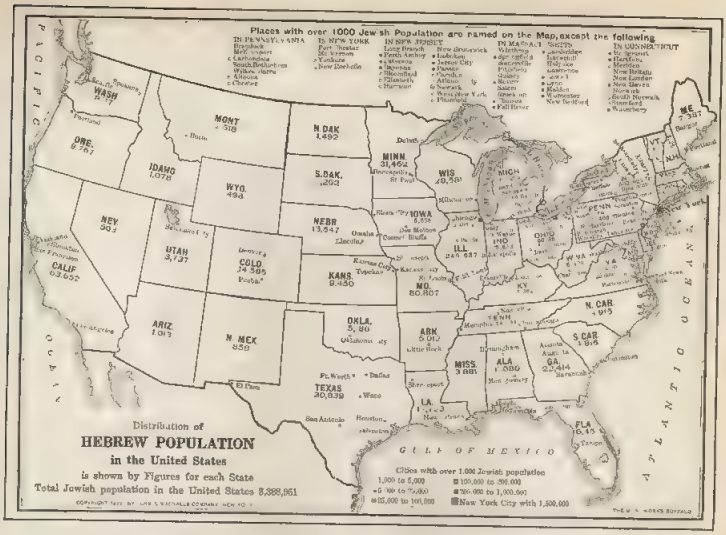
And it possesses the beauty of line, the fine appointments and finish that make it a car of distinction in any company.

The superb balance of the car—the perfect coordination of clutch, transmission and rear axle—guarantees not only delightful, care-free motoring, but years of it at minimum expense.

These are the true qualities of a champion. They are yours today for $2195 f. o. b. Detroit.

PAIGE

THE MOST BEAUTIFUL CAR IN AMERICA



JEWISH INCREASE IN AMERICA

POGROMS and other less violent forms of anti-Semitism in Eastern Europe have resulted in a progressively large Jewish immigration to our shores, and this influx, combined with a natural increase, has brought the Jewish population in the United States up from 1,777,185 (estimated) in 1907 to 3,390,301 (estimated) in 1918, an increase of 1,613,116, or nearly double, in eleven years. The total given on the map is for continental United States only. The Jews now constitute 3.22 per cent of the entire population of the country. Intermarrying but little with other stock, and rarely leaving the faith of their fathers, the Jews in the United States have preserved their racial homogeneity, as they have done in all countries since the great dispersion early in our era, and are found clustered mainly in the great centers of population. Approximately three-fourths of the Jews here are found in ten cities, according to the American Jewish Year Book, whose figures form the basis of this article and map, and about half of the entire number live in New York, where they constitute about 25 per cent. of the total population. The other nine cities leading in the number of Jewish inhabitants are Chicago, with 225,000; Philadelphia, 200,000, Cleveland, 100,000; Boston, 77,500; Baltimore, 60,000; St. Louis, 60,000; Pittsburgh, 60,000; Newark, 55,000, and Detroit, 50,000. It is interesting to note, however, we read in the Year Book, that while New York contains such a large quota of the Jews of the United States, it is not proportionately the most Jewish city. Chelsea, Mass., has a Jewish population of 13,000, or 28 per cent. of its general population.

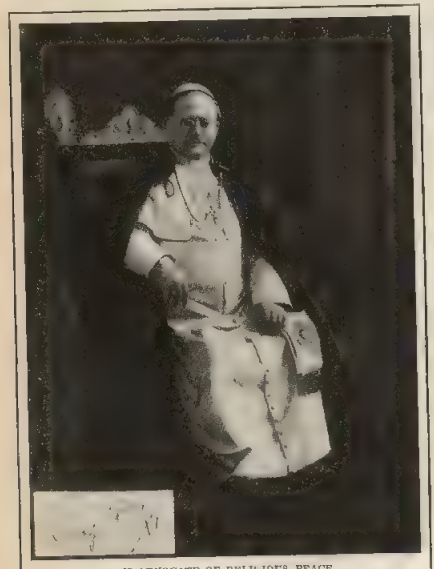
While New York State contains the largest number of Jews—1,603,923—Wyoming, in continental United States, contains the smallest quota, 498, and Alaska has only two more. Looking seaward, we find that there are 150 Jews in the Hawaiian Islands; 500 in the Philippines, and 200 in Porto Rico. Pennsylvania comes second to New York in its Jewish population, with 322,406, and then, in their order among the twelve States which contain 90 per cent. of the Jews in this country, are: Illinois, 246,637, Massachusetts, 189,671; Ohio, 166,361; New Jersey, 149,476, Missouri, 80,807; Connecticut, 66,862; California, 63,652; Maryland, 62,642; Michigan, 63,254; and Indiana, 25,833.

THE GOOD IN "WILD YOUNG PEOPLE"—Youth will have its fling, and some 2,000 years ago that wise old Roman, Cicero, remarked that "madness attends youth as prudence does age," and this, we are told, is about as far as just criticism can go against the youth of to-day. No child, it is said, is really bad, and the "wild young people of to-day" against whom so much stern criticism has been directed in recent months are all right at heart and no worse than their parents were a generation ago. It is no new topic, this talk of the folly of youth, says the St. Louis *Globe-Democrat*, remarking that—

"The world has been wild and youth could not help but take on the aspects and the manner of wildness. It is a symptom, not a disease. And it is passing. Has it worked a moral degeneration of youth? It has not. The average youth of to-day, girl or boy, is sound. The flamboyances of the day are superficial. They have touched the surface of youth with garish pigments, but they have not marred its soul. For somehow, the soul of youth is commonly steered safely through the perils that beset it. Much that we think is corrupting somehow does not corrupt. The world is filled with men and women, staid and respectable, who were wild things in their youth, and by far the greater part of the wild youngsters of to-day will be the respectable fathers and mothers of to-morrow. Most assuredly we need better homes and a number of other bettered influences, but after all 'there is a divinity that shapes our ends, rough hew them how we will,' and youth in particular is never without its guardianship."

THE PAPACY'S PROGRAM

PEACE WITH ITALY, reunion of the Roman Catholic Church with the Greek and Russian Orthodox Churches and a return of the Anglican Church to Rome are among the possibilities envisioned by some observers in the new accession to the Papacy. Whatever the general view may be, at least one Anglican paper thinks that the road to Rome may be opened



AN ADVOCATE OF RELIGIOUS PEACE

Pope Pius XI, who, as a member of the 'liberal school,' is said to hope for reconciliation with Italy and with the Greek, Russian and Anglican Churches

under Pope Pius XI, and at least one Russian Patriarch is said to be sympathetic toward a similar step to be taken by the Russian Orthodox Church. The new Pope stands for the liberal school, the conciliatingly he has assumed the name of the Pius, writes a correspondent of the *Westminster Gazette* (London), and the Pope's own view of the Papacy, says this writer, "has been expressed in the words, 'not national, not international, but supernatural.' Furthermore, "it is known that Benedict's last thoughts were for that reconciliation which time has shown is more important to Italy than to the Church. . . . Under the new Pope the feud, the complication by the popular or Catholic party, promises to work itself out."

Speaking of the possibility of reunion with Rome, *The Church Times* (London), an Anglican Church organ, admits that there is a serious division between the Church of England and the Church of Rome, but believes the gulf is neither so serious nor so deep as some on both sides would make out. Suggesting that conferences looking to reunion be held, the Anglican journal asks:

"Is it allowable to hope anything from the election of Cardinal Ratti to the see of Peter? We can not but think it is, tho it may be that the wish is father to the thought. But we are told that he chose the name Pius because 'Pius is a name which is an omen of peace,' and that he declared the blessing given outside St. Peter's, immediately after his election, was intended to extend not only to those actually present, or to those in Rome alone or in Italy, but to all nations and all races as a pledge and a message of that universal pacification which we all so ardently desire. There is more, however, than this to make us hope. Pius XI belongs to the freemasonry of scholars, and that is always a bond of union. It is rare that religious animosities are so fierce among them as among others. Mabillon, the great French Benedictine scholar of the seventeenth century, a time of bitter religious hatred between Catholic and Protestant—always spoke of Protestants as 'our separated brethren.' And there are many friendships among separated brethren in the world of learning to-day. We must not, of course, expect too much or form hopes that are certain to be disappointed, but to assume, as some do, that reunion with Rome is out of the question, is to go far to make it so."

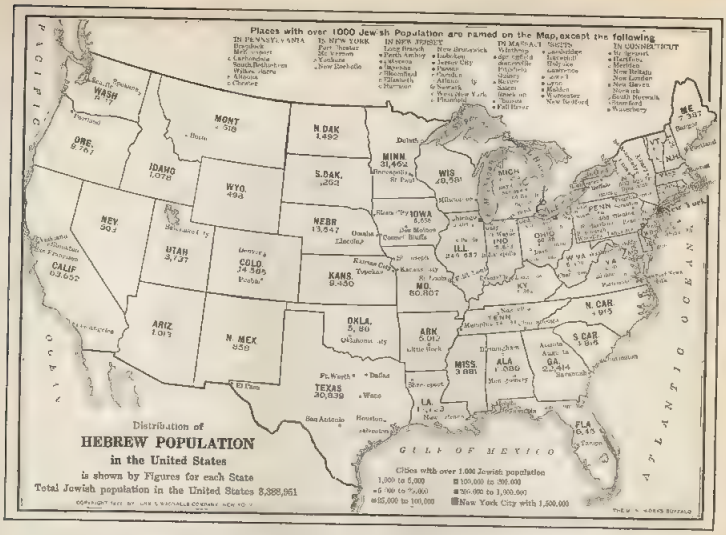
Turning to the question of temporal power, it was not well understood outside of Catholic circles, writes Maurice Francis Egan in the American *Review of Reviews*, "that the temporal power was never looked on as a necessity to the permanence and growth of a church whose essential existence depended entirely on its spiritual qualities," and he holds that "Catholics have no intention whatever of proposing or of demanding that the city of Rome should be returned to the Pope." While the question of temporal power seems to be moving toward settlement, Mr. Egan thinks that—

"Another great question which will probably occupy Pius XI is the understanding as to a reunion with the Greek Orthodox Church. Russia has hitherto been the implacable enemy of Rome; the Russian Church was essentially a state church; but now that state and Church have separated, there is a party in Russia, including one of the most important of the Patriarchs, anxious to join the Roman Catholic Church, as the most stable organization ecclesiastically in the world. The question of the celibacy of the clergy would not be an invincible barrier. It did not prove to be so in the case of the Lithuanians and other schismatics; and the monastic orders, in the Russian Church, are solemnly vowed to celibacy. . . .

"Pius X was purely an ecclesiastical Pope. He is looked on to-day by Catholics as having greatly increased spiritual fervor in the Church; Benedict XV saw the opportunity for the restoration of Roman diplomacy, which had for a time failed in nearly every respect; and Pius XI, in accepting so cordially the results of the Conference at Washington, has ranged himself, as Beaconsfield once put it, 'on the side of the angels,' where every Pope ought to be.

"As to diplomatic relations with the United States there is no indication that the Vatican desires them; and there is no sign on the part of either the Catholics or non-Catholics in the United States that they would be considered desirable, for, since the Philippine matter has been settled, there is no religious-political question in which the Vatican is concerned of any domestic interest to us."

Viewing him as a "moderate, constructively conservative, and highly enlightened man," *The Christian Century* (Undenominational) considers the election of Pope Pius XI as "the most daring challenge to Protestantism since the Reformation," and thinks that Protestantism must marshal its forces, "organizing the religion of freedom as the Roman Church has organized the religion of authority, or the future will be dark for the faith that has made the modern world."



JEWISH INCREASE IN AMERICA

POGROMS and other less violent forms of anti-Semitism in Eastern Europe have resulted in a progressively large Jewish immigration to our shores, and this influx, combined with a natural increase, has brought the Jewish population in the United States up from 1,777,185 (estimated) in 1907 to 3,390,301 (estimated) in 1918, an increase of 1,613,116, or nearly double, in eleven years. The total given on the map is for continental United States only. The Jews now constitute 3.22 per cent of the entire population of the country. Intermarrying but little with other stock, and rarely leaving the faith of their fathers, the Jews in the United States have preserved their racial homogeneity, as they have done in all countries since the great dispersion early in our era, and are found clustered mainly in the great centers of population. Approximately three-fourths of the Jews here are found in ten cities, according to the American Jewish Year Book, whose figures form the basis of this article and map, and about half of the entire number live in New York, where they constitute about 25 per cent. of the total population. The other nine cities leading in the number of Jewish inhabitants are Chicago, with 225,000; Philadelphia, 200,000, Cleveland, 100,000; Boston, 77,500; Baltimore, 60,000; St. Louis, 60,000; Pittsburgh, 60,000; Newark, 55,000, and Detroit, 50,000. It is interesting to note, however, we read in the Year Book, that while New York contains such a large quota of the Jews of the United States, it is not proportionately the most Jewish city. Chelsea, Mass., has a Jewish population of 13,000, or 28 per cent. of its general population.

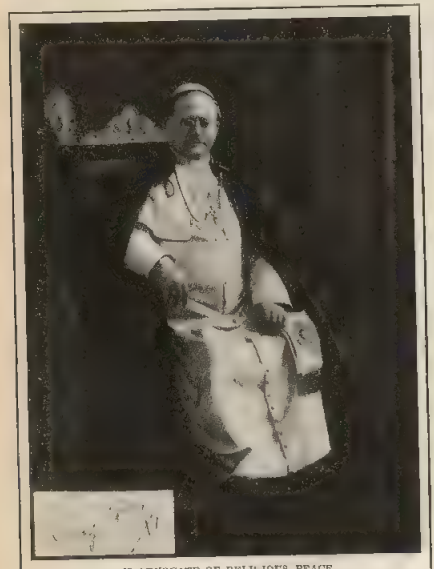
While New York State contains the largest number of Jews—1,603,923—Wyoming, in continental United States, contains the smallest quota, 498, and Alaska has only two more. Looking seaward, we find that there are 150 Jews in the Hawaiian Islands; 500 in the Philippines, and 200 in Porto Rico. Pennsylvania comes second to New York in its Jewish population, with 322,406, and then, in their order among the twelve States which contain 90 per cent. of the Jews in this country, are: Illinois, 246,637, Massachusetts, 189,671; Ohio, 166,361; New Jersey, 149,476, Missouri, 80,807; Connecticut, 66,862; California, 63,652; Maryland, 62,642; Michigan, 63,254; and Indiana, 25,833.

THE GOOD IN "WILD YOUNG PEOPLE"—Youth will have its fling, and some 2,000 years ago that wise old Roman, Cicero, remarked that "madness attends youth as prudence does age," and this, we are told, is about as far as just criticism can go against the youth of to-day. No child, it is said, is really bad, and the "wild young people of to-day" against whom so much stern criticism has been directed in recent months are all right at heart and no worse than their parents were a generation ago. It is no new topic, this talk of the folly of youth, says the St. Louis *Globe-Democrat*, remarking that—

"The world has been wild and youth could not help but take on the aspects and the manner of wildness. It is a symptom, not a disease. And it is passing. Has it worked a moral degeneration of youth? It has not. The average youth of to-day, girl or boy, is sound. The flamboyances of the day are superficial. They have touched the surface of youth with garish pigments, but they have not marred its soul. For somehow, the soul of youth is commonly steered safely through the perils that beset it. Much that we think is corrupting somehow does not corrupt. The world is filled with men and women, staid and respectable, who were wild things in their youth, and by far the greater part of the wild youngsters of to-day will be the respectable fathers and mothers of to-morrow. Most assuredly we need better homes and a number of other bettered influences, but after all 'there is a divinity that shapes our ends, rough hew them how we will,' and youth in particular is never without its guardianship."

THE PAPACY'S PROGRAM

PEACE WITH ITALY, reunion of the Roman Catholic Church with the Greek and Russian Orthodox Churches and a return of the Anglican Church to Rome are among the possibilities envisioned by some observers in the new accession to the Papacy. Whatever the general view may be, at least one Anglican paper thinks that the road to Rome may be opened



AN ADVOCATE OF RELIGIOUS PEACE

Pope Pius XI, who, as a member of the 'liberal school,' is said to hope for reconciliation with Italy and with the Greek, Russian and Anglican Churches

under Pope Pius XI, and at least one Russian Patriarch is said to be sympathetic toward a similar step to be taken by the Russian Orthodox Church. The new Pope stands for the liberal school, the conciliatingly he has assumed the name of the Pius, writes a correspondent of the *Westminster Gazette* (London), and the Pope's own view of the Papacy, says this writer, "has been expressed in the words, 'not national, not international, but supernatural.' Furthermore, "it is known that Benedict's last thoughts were for that reconciliation which time has shown is more important to Italy than to the Church. . . . Under the new Pope the feud, the complication by the popular or Catholic party, promises to work itself out."

Speaking of the possibility of reunion with Rome, *The Church Times* (London), an Anglican Church organ, admits that there is a serious division between the Church of England and the Church of Rome, but believes the gulf is neither so serious nor so deep as some on both sides would make out. Suggesting that conferences looking to reunion be held, the Anglican journal asks:

"Is it allowable to hope anything from the election of Cardinal Ratti to the see of Peter? We can not but think it is, tho it may be that the wish is father to the thought. But we are told that he chose the name Pius because 'Pius is a name which is an omen of peace,' and that he declared the blessing given outside St. Peter's, immediately after his election, was intended to extend not only to those actually present, or to those in Rome alone or in Italy, but to all nations and all races as a pledge and a message of that universal pacification which we all so ardently desire. There is more, however, than this to make us hope. Pius XI belongs to the freemasonry of scholars, and that is always a bond of union. It is rare that religious animosities are so fierce among them as among others. We must not, of course, expect too much or form hopes that are certain to be disappointed, but to assume, as some do, that reunion with Rome is out of the question, is to go far to make it so."

Turning to the question of temporal power, it was not well understood outside of Catholic circles, writes Maurice Francis Egan in the American *Review of Reviews*, "that the temporal power was never looked on as a necessity to the permanence and growth of a church whose essential existence depended entirely on its spiritual qualities," and he holds that "Catholics have no intention whatever of proposing or of demanding that the city of Rome should be returned to the Pope." While the question of temporal power seems to be moving toward settlement, Mr. Egan thinks that—

"Another great question which will probably occupy Pius XI is the understanding as to a reunion with the Greek Orthodox Church. Russia has hitherto been the implacable enemy of Rome; the Russian Church was essentially a state church; but now that state and Church have separated, there is a party in Russia, including one of the most important of the Patriarchs, anxious to join the Roman Catholic Church, as the most stable organization ecclesiastically in the world. The question of the celibacy of the clergy would not be an invincible barrier. It did not prove to be so in the case of the Lithuanians and other schismatics; and the monastic orders, in the Russian Church, are solemnly vowed to celibacy. . . .

"Pius X was purely an ecclesiastical Pope. He is looked on to-day by Catholics as having greatly increased spiritual fervor in the Church; Benedict XV saw the opportunity for the restoration of Roman diplomacy, which had for a time failed in nearly every respect; and Pius XI, in accepting so cordially the results of the Conference at Washington, has ranged himself, as Beaconsfield once put it, 'on the side of the angels,' where every Pope ought to be.

"As to diplomatic relations with the United States there is no indication that the Vatican desires them; and there is no sign on the part of either the Catholics or non-Catholics in the United States that they would be considered desirable, for, since the Philippine matter has been settled, there is no religious-political question in which the Vatican is concerned of any domestic interest to us."

Viewing him as a "moderate, constructively conservative, and highly enlightened man," *The Christian Century* (Undenominational) considers the election of Pope Pius XI as "the most daring challenge to Protestantism since the Reformation," and thinks that Protestantism must marshal its forces, "organizing the religion of freedom as the Roman Church has organized the religion of authority, or the future will be dark for the faith that has made the modern world."

Class of 1922, Davey Institute of Tree Surgery. Thorough scientific education plus practical skill trained into them, makes these young athletes master Tree Surgeons

A Million Dollar Business in Saving Trees

By Martin L. Davey, General Manager

THE business of The Davey Tree Expert Company is now running at the rate of one million dollars for 1922. It has taken more than twenty years of steady building to reach this volume. The Davey Company sells nothing but service—the services of carefully selected, highly trained, scientifically educated Tree Surgeons, who save trees without guessing or experiment, when they can be saved. This service is available almost everywhere in the eastern half of the United States. Nearly fifteen thousand clients have been served up to this time, many of them regularly.

Lieut. Colonel Frank K. Hyatt, treasurer of the Pennsylvania Military Academy, in a letter written to The Davey Tree Expert Company December 2, 1921, said:

> "Three of your men are performing tree surgery at the college and while I had only engaged them for two days, their work was of such character that I was compelled to hold them longer. In fact, they will probably be with us four or five days.
>
> I can seem to have thorough knowledge of their work and the foreman in charge is a very unusual man. It gives me pleasure to congratulate you on the character of work which your employees are doing."

This letter is typical of many hundreds of voluntary letters of commendation received by the Davey Company from its clients. They come regularly from every section served by Davey Tree Surgeons. It is significant that nearly every letter emphasizes the high-type men, their apparent skill and ability to do their work with intelligence and thoroughness and speed, but more particularly the fact that they are diligent and zealous workers.

The evolution of Davey Tree Surgery compared to the automobile

I do not presume to say that every last client is 100% satisfied. That would be too much to expect from a human organization. But more than 95% of the clients are fully pleased with both the work and the service. Nor would I claim that the Davey organization has always been as good as it is today, nor that the methods employed have always been as remarkably good and successful as they are now.

Davey Tree Surgery has been before the public nearly as long as the automobile, and its development has been almost parallel. You will easily recall the automobile of fifteen or twenty years ago. You recall how often it broke down, how many times it was laid up by the roadside? You remember its imperfect mechanism, its poor lighting, the hard job of cranking? Well, the fundamental principles of the automobile were the same then as now. The wonderful progress has been made in the refinements and the mechanical improvements. Then think of the really marvelous piece of machinery that you buy in the modern automobile.

Just so with Davey Tree Surgery. The fundamental principles were the same fifteen or twenty years ago as today. It was then relatively crude and imperfect. But honest effort and a determined purpose have produced refinements and mechanical improvements and scientific accuracy that are both marvelous and inspiring.

Only two or three men out of a hundred applicants are finally accepted

However, it is the human element of the Davey organization that I wish to describe. The high type men, their surprising efficiency, their zeal and skill and knowledge are the result of something back behind. That something is a policy that could produce no other result.

From time to time we need additional men. We run advertisements in the cities within a reasonable distance of our headquarters, giving our specifications. Many replies are received. An information blank is sent to each applicant, in which he must give his life history. If a hundred information blanks are returned, our experience has shown that not more than fifty seem to meet our requirements. The others are cast aside.

We then send our representatives to these cities and notify the fifty to report at a certain hotel for personal interviews. Out of the fifty men thus interviewed, we select not more than five who seem to be the right kind.

A regular training field where practical training is given to every man

These five are brought in to Kent (Ohio) for practical training, where we maintain a regular training field. These five are put through a thorough course of practical training for several weeks, at the end of which we select not more than two or three as qualified and made of the right stuff.

Thus, out of an original hundred definite applicants, we get not more than two or three. The process of selection, though it is severe, works wonders and gives us unusual men for the very important work which we do.

Those who finally pass are sent out into the field, always under the direction of master Tree Surgeons. They simply grow into the work and acquire almost intuitive skill.

A chief expert travels regularly from squad to squad

The [illegible] have a chief expert who spends all of his time traveling from squad to squad to check up on all the details of the work and the merit of each individual—to see that our high standard is consistently maintained. Occasionally he tells us that a certain man is not our kind and should not be in the Davey organization. That man is promptly dismissed. Very often he tells us that certain men are doing especially fine work and recommends advancement. Such men are promptly advanced.

So the really good men remain with us—and they like their jobs mighty well. Naturally enough, they give superior service.

Constant supervision by local representatives

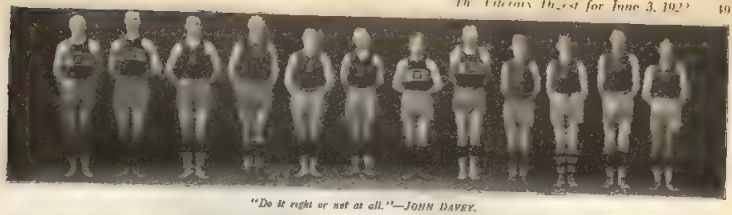
In addition to this, a number of squads are under the constant supervision of each local representative, of whom we have nearly thirty, whose highest self interest requires watchful care of the interests of each client, to see that he gets the maximum service.

More than this, we require periodic reports on every man in our field force. Our local representatives give detailed monthly reports on the foremen under their supervision. Each foreman gives a monthly report in great detail concerning each man in his squad. Every bit of information from every source about each individual goes into his personal service record. And every one knows that his service record is complete and strives to keep it good.

The only place in the world where the science of Tree Surgery is taught

When a man in the field force has reached a proper state of development, he is brought in to Kent to attend our resident school. This course covers two years—four months each year. We maintain a regular school with complete library and laboratory equipment and a corps of instructors with fine scientific training from various colleges and universities, plus special training in the Davey organization. There is no other school in the world that teaches Tree Surgery, so we maintain the Davey Institute of Tree Surgery as a matter of practical necessity.

In this school we teach only those things required to make real Tree Surgeons—nothing superfluous or unnecessary. The course includes Botany and Dendrology, Pathology and Entomology, Soils and the Feeding of Trees, Spraying



"Do it right or not at all."—JOHN DAVEY.

and Fruit-growing, and above all the Theory and Practice of Tree Surgery.

Every man in the Davey organization is a trained man—Davey trained

When a man has been with us long enough, has had the necessary amount of complete training, and has demonstrated to us his ability and qualifications, he is entrusted with the handling of operations—then and only then.

Every man in the Davey organization is a trained man Davey trained. If a man should apply to us for employment and say that he is an expert and understands all phases of the work, recommends himself highly—we say to him, if we should happen to need men, "All right, you may start in at the bottom and show us." Very few of them ever come and we are just as well satisfied. Our experience has shown us that not more than one in ten of these so-called tree men from the outside is the right kind of man. None of them are real experts when they come to us. All of them have many things to unlearn.

The Davey Research Department does the experimenting—the client's trees are never experimented upon

In addition to all these other things, we maintain a Research Department in charge of scientists of practical experience. It is their duty to work out every scientific and practical problem of Tree Surgery, as fast as possible. They have done wonderful work. They gather data from every available source, particularly from the experience of the Davey organization, in addition to original experiments. Every experiment is conducted in Kent by our Research Department and never on the trees of a client.

For instance, our Research Department has worked out a list of "forbidden trees," those which experience has demonstrated are not worth complete treatment or do not respond properly to treatment. On these trees our experts are permitted to do only first-aid work.

A national organization that carries with it an assured protection to tree owners

There is no other national organization in our field. There are, of course, many local imitators. It is an unfortunate fact that there are mighty few good ones among them. We would be happy if they were all good and well qualified. But who will supervise them? Who will train them? Who will provide the discipline that will hold them to high-quality service? Who will pass judgment on the results of their work?

There are quite a number, who have never had any contact with the Davey organization, who claim falsely that they are Davey men. There are some, unfortunately, whom we have been obliged to let go for obvious faults, who attempt to capitalize on the prestige of the Davey name, to our detriment and to that of the profession we have built up and have endeavored to honor.

The unseen things that make quality are only possible because of large volume

In the Davey organization it is the unseen things (rigid selection of men, practical and thorough training, supervision of chief expert and local representatives, resident school, Research Department, standardization of methods and organization discipline that make real quality and lasting merit. On a business of nearly three-quarters of a million dollars in 1920, we spent three times as [illegible] on these unseen things which make quality [illegible] made in profit. In spite of the depression,

JOHN DAVEY

Father of Tree Surgery

[illegible] gave to the world the science of Tree Surgery. Before the publication of [illegible] a of the scientific [illegible] ment of trees [illegible] ged. John Davey created the [illegible] fundamental principles [illegible] ...ercises and [illegible] ...ery improvement [illegible] ...radual outlines [illegible] ...ate into popular form [illegible] ...act that the tree is a living, breathing [illegible]

MARTIN L. DAVEY,

General Manager, who made of a father's dream a business reality and built the Davey [illegible] tion.

[illegible] ...ree functions just as truly [illegible]

This question of [illegible] mental importance [illegible] to exist as a vital, forward-[illegible] ...ess we protect what we have [illegible] up that which we have so far [illegible] We can not afford [illegible] ...much longer [illegible] America must [illegible] decline and [illegible]

we did a business of almost six hundred thousand in 1921 and spent four times as much on these hidden things that make quality as our profit amounted to. The business of the Davey Company is now running at the rate of one million dollars for 1922.

Davey methods have been standardized. Davey work is the same in Boston as it is in Chicago, the same in New York as in Kansas City, the same in Montreal as in New Orleans. Davey experts are of uniformly high type, all thoroughly trained, all carefully selected and developed. And best of all is organization discipline that requires and maintains a constant high standard down to the smallest details of work and service.

A tree-man may fool the public but he cannot fool us

It has seemed to me that the greatest thing the Davey organization does for its clients, over and above all these other things, is that of relieving the client of all worry and responsibility in the selection of the men who are to treat his priceless trees. A tree-man may fool the public most of whom know little about trees. But he cannot fool us. A man must be right in every sense of the word or he cannot go very far in the Davey organization.

We, who know Tree Surgery values, select the men to whom this work of very great importance is to be entrusted. We know they are right and worthy of your confidence and our confidence or we would not send them to you. They come to you with our seal of approval.

They carry with them the most priceless possession we have—our reputation. We are as jealous of that reputation as a good woman is of her good name. Business and professional success are merely results. The causes are behind the scenes. And that is the reason for this little story of the Davey organization.

THE DAVEY TREE EXPERT CO., Inc.,
[illegible] Elm Street, Kent, Ohio.

Branch offices with telephone connections: New York, Astor Trust Bldg. Fifth Ave. and 42nd St.; Boston, Massachusetts Trust Bldg.; Philadelphia, Land Title Bldg.; Baltimore, American Bldg.; Pittsburgh, 331 Fourth Ave.; Buffalo, 310 Franklin St.; Cleveland, Hippodrome Bldg.; Detroit, General Motors Bldg.; Cincinnati, Mercantile Library Bldg.; Chicago, Westminster Bldg.; St. Louis, Central National Bank Bldg.; Kansas City, Scarritt Bldg.; Montreal, 252 Languichiere, West

Davey Tree Surgeons are near you—if you live between Boston and Kansas City. They are easily available and handle operations of any size, large or small. Write or wire Kent, Ohio, or nearest office.

DAVEY TREE SURGEONS

Every real Davey Tree Surgeon is in the employ of The Davey Tree Expert Co., Inc., and the public is cautioned against [illegible] representing themselves [illegible] connected with the Davey Company and not with an individual [illegible] ...ed-out employees. Every owner of trees [illegible] ...should insist on employing only Davey men. Any one who claims to be a Davey man, or pledges [illegible] ...should be reported [illegible] ...at once to the Main Office at Kent, Ohio.

Fifty Hardware Articles Should Be Sold By Weight

No 74 **DAYTON SCALE** *Pays For Itself Through The Savings It Effects*

Through the accuracy of this Dayton Moneyweight Scale thousands of hardware merchants are securing their full profits on these articles.

Some of the Things It Does:

1. Protects your profits.
2. Enables you to sell profitably in small quantities, articles bought in bulk.
3. Speeds up selling.
4. Automatically gives you and your customers visible indication of weight.
5. Increases your trade.
6. Makes your store more attractive.
7. Indicates progressiveness.
8. Inspires customer confidence.

DAYTON MONEYWEIGHT SCALE CO.

Dayton, Ohio

Branches in 140 cities

Specifications:

110 lbs. capacity.

10 lbs. automatic chart capacity.

10 lbs. on tare beam.

90 lbs. loose weights.

Hair line weight and value indicator.

Oxidized iron platform 16" x 16".

Supplied with scoop, also wire rack.

"On and Off" Scoop lever balances scale when either scoop or wire rack is used.

Supplied with Total Adder.

Height 31".

Counter space, 24"x20".

Base 5¼" high.

Regular finish gray enamel.

Charts:

G—Graduated every ounce, price values 5c to 40c per pound.

H—Graduated every ounce, price values 4c to 60c per pound.

M—Graduated every ounce, price values ranging from 2½c to 40c per pound.

T—Graduated every ounce, price values ranging from 10c to 60c per pound.

AA—Graduated in ounces, price values ½c—5c to 75c per pound.

DOCTOR, lawyer, merchant, chief—butcher, baker, candle-stick maker—every man, woman and youngster should have an Ingersoll Watch.

Millions already possess Ingersolls. They have been bought by tens of millions.

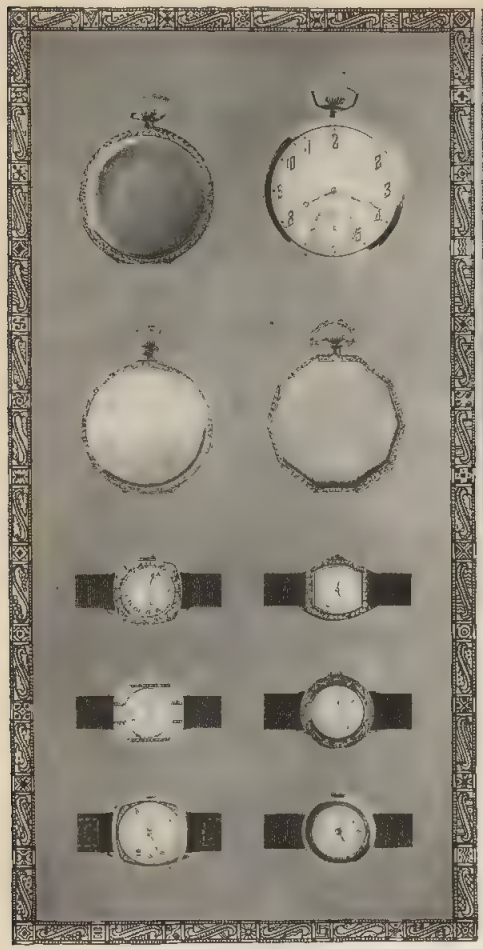
Around the world, for rich and poor alike, Ingersoll Watches keep good time—and good faith. Sturdy, reasonable, reliable, they carry a sound guarantee.

For work and recreation, summer time and all the time even if you have a high-priced watch—it is well to own an Ingersoll time-keeper.

At golf, tennis, motoring—on field or stream—you need an Ingersoll.

One need not worry about loss, theft nor breakage. The cost of a new Ingersoll is so small, comparatively. Get one before your vacation.

INGERSOLL WATCH CO., Inc.
NEW YORK SAN FRANCISCO CHICAGO



A few of the many rich examples of case making designed and fashioned by the Wadsworth artists. The illustrations show the cases considerably smaller than actual size

AS the spirit of Christmas thrills us anew with thoughts of giving, it is then that we wish to remember some dear one with a gift of fitting sentiment.

Such a gift is not chosen lightly, but with a care as thoughtful as the sentiment which inspired it. What then is more in keeping with the sincerity of your regard than a watch—a reliable movement in a beautiful Wadsworth Case?

In the watch cases pictured here you see some of the newest and finest examples of Wadsworth artistry—cases which for beauty and exactness of fit have never been surpassed. Among the many exquisite creations of the Wadsworth artists you will

Wadsworth Cases

find one well fitted to bear your message of affection.

For more than thirty years Wadsworth Cases have dressed and protected the leading watch movements. Many of the most beautiful, most popular watch-case designs with which you are acquainted are Wadsworth creations.

When you buy a watch select a movement that your jeweler will recommend and see that it is dressed in a Wadsworth Case. The Wadsworth name in a watch case is your assurance of correct design, finest material and perfect workmanship.

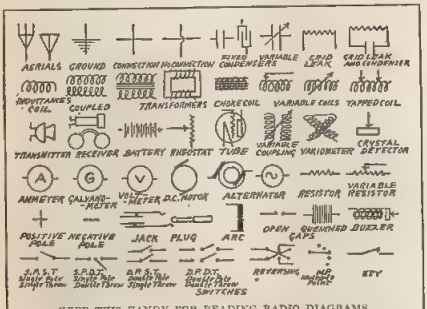
through the Post Office Department all receiving stations should be licensed and the receiving apparatus rented at a fixt rate which would insure a sufficient revenue to maintain a high-class program of entertainment from the transmitting station, or a service charge made for the programs furnished."

The situation has been well summarized editorially in *Radio* (San Francisco), which takes the broad view that radio broadcasting is a public utility:

"Many people are raising the question as to who will maintain radiophone broadcasting stations in the future. The answer is found in the recommendation of the Washington Radio Conference 'that radio communication is a public utility,' and in the fact that definite bands of wave-lengths have been set aside for broadcasting from government stations and public institutions. The broadcasting of information of all kinds will soon become as much of a public necessity as are good roads. The inaugural address of the next President of the United States will undoubtedly be heard by the people of the country by radiophone. The Borough of Queens, New York City, is considering the installation of a municipal station. On every hand there are signs to show that the broadcasting of the future will be conducted as a governmental function, or at least as a governmentally regulated monopoly.



KEEP THIS HANDY FOR READING RADIO DIAGRAMS.

RADIO SYMBOLS

IN THE PRESENTATION of radio circuit diagrams, or 'hookups' certain symbols are universally employed in order to make it unnecessary to cumber the drawing with descriptive words or even letters. But of course if one has not learned the import of the symbols, the drawings are unintelligible. For the benefit of readers whose interest in radio is of recent origin (some of whom have written to ask fuller interpretation of diagrams hitherto published), we present here a group of the symbols commonly employed, excerpted from *Popular Radio* (New York), regarding which Mr. A. Hyatt Verrill made this explicative comment:

"The symbols used in radio are comparatively few and are shown in the accompanying illustration.

"Do not, however, make the mistake that was made by an amateur who, seeing the symbols representing the primary and secondary coils of an inductance coil drawn side by side, constructed his coil in that way and wondered why his set would not work!

"Inductances are represented side by side in the diagrams merely to avoid confusion of lines, and the two windings should invariably be placed one over the other.

"Also, bear in mind that diagrams of wiring are always shown with the wires running straight, parallel and with square corners, and with a great deal of space between them. This is done for the sake of appearances in the drawing, ease in drafting, and to render 'reading' the diagrams easier. In following such a diagram the wires may be carried at any angle, in curves or around corners and may be placed much closer together than is indicated. If you should examine a ready-made set you would find instruments and wires packed closely together with the wires far from straight and parallel. Indeed, it is an unwise plan to carry wires parallel for any distance, as there is always a tendency to 'induced' currents when this is done. The main points to remember are to cross wires as seldom as possible; to keep them well separated where they cross; to keep them as short as possible; to have them well insulated and to make good connections."

RADIO FROM A RING

INGENIOUS YOUNG AMATEURS continue to vie with one another in the production of midget radio receiving sets. In the Springfield (Mass.) *Republican*, Mr. Avery E. Lord tells of the work of a New Jersey boy whose latest product is made in the form of a ring to be worn on the finger. It is of course to be understood that diminutive sets such as this use a crystal detector, and therefore can not be expected as a rule to bring messages from stations more than fifteen or twenty miles away, with occasional extension by five or ten miles under exceptionally favorable circumstances. But there is perennial interest in the fact that so tiny a mechanism can be made to interpret any radio messages whatsoever, even with the aid of an aerial

Here is Mr. Lord's account of the ring receiver:

"A radio receiving set so efficient that it can receive music, speeches or spark messages as well as many large-sized sets, altho it is built in the form of a ring and is no larger than many of the little finger rings now affected by many persons, is what Alfred G. Rinehart, 19, of 527 Morris avenue, Elizabeth, N. J., claims for a set which he has just completed. At a demonstration given at his home recently, Mr. Rinehart's claims seemed to be justified, for F. Reed Campouilliez, at WJZ, was clearly heard singing from the 'Messiah,' and not a word or a note of the accompaniment was missed. The tiny set took the words and music from the air and gave them out through the phones as loudly and as clearly as an ordinary telephone message under good conditions.

"The entire set, outside of the slender coil, slightly more than an eighth of an inch in diameter, which is smoothly covered with sealing wax and encircles the finger, measures but 1 by ⅝ by 7-16 inches. These measurements include the brightly polished bakelite panel on which are mounted a diminutive crystal detector of the 'cat-whisker' type, and a small switch control which is connected with the coil by nine taps, and which permits as many different tuning adjustments by means of a movable hand which makes connections with any one of nine tiny brass studs neatly arranged in the form of a semicircle.

"The ring set seems to eliminate interference to a remarkable degree, and concerts or code messages can be received over it without any difficulty due to imperfectly heard passages under normal conditions. With the inner coil-taps, a wide range of tuning is possible. During the test, WJZ at Newark could be tuned out completely, without a trace of it being heard, and a code message which was being transmitted, picked up, merely by moving the switch control on the ring over one point.

"Although the inventor of this ring set recently built a 'Domino Midget' set measuring only 1¾ by 1 by ⅝ inches, he has used an entirely different hookup for his ring set. With this miniature receiving apparatus he can receive messages transmitted on wave lengths up to and including 550 meters.

"To emphasize the efficiency of his tiny set, the inventor disconnected it from his two-strand, 75-foot aerial and water-pipe ground and went outdoors, connecting the set to the metal stem of an ordinary umbrella for an aerial, and using a screw-driver stuck into the earth for a ground. With this outfit the listeners heard numbers sent out by WJZ, faintly, but loud enough to distinguish the tunes and hear the operator signing off."

IS RADIO ONLY A PASSING FAD?

WONDER AT THE VERITABLE EPIDEMIC of interest in the new radio art is pretty sure to be followed whenever radio is being talked about—and it is being talked about wherever people congregate—by the question as to whether this interest will last. The consensus of opinion appears to be that, whereas there will of course be many modifications of present conditions, and doubtless quite unexpected developments, yet the value of radio from the standpoint both of entertainment and substantial public information and education is far too great to permit doubt of the permanency of this new public utility.

Meantime it is of interest to read such a summary of the present status of the art as is given in *Radio Digest Illustrated* (Chicago). One can hardly doubt that a movement which has attained such proportions in so short a time meets a genuine public need:

"Radio which started as a scientific experiment only, recently has become a craze, but now certainly it is rapidly approaching the status of a business, or perhaps a profession.

"Even the experts do not dare estimate the number of receiving stations, altho 600,000 has been hazarded as a fair guess, most of them saying that the output of the manufacturers only is the limit to which receiving stations will go. It is known, however, that there are 18,690 sending stations to-day; this surprising figure was reached on April 15 and includes commercial, ship and amateur stations licensed by the Department of Commerce. Of the total, 15,907 are land stations, of which 678 are commercial, the balance being amateurs and special amateurs.

"There are ten transoceanic companies operating in this country. One hundred and twenty other stations are licensed to operate from city to city, while 36 'PG' stations are licensed to communicate from the coast to ships.

"The number of limited commercial stations commonly called broadcasting stations, which send out radio telephonic entertainment, market and weather reports, reached 182 on April 15, but other applications are on file and the daily mail brings dozens of them. There were only 67 such stations on March 10, showing an increase of nearly 3½ a day. Thirty-two were issued during the past week. Special stations total 534, comprising 213 experimental, 123 technical, mostly colleges, and 198 special amateur stations. There are to-day 15,031 regularly licensed amateurs transmitting, and of course receiving also, all of whom are licensed through their district inspectors in the nine districts into which the country is divided for their convenience.

"American ships to the number of 2,783 are carrying radio and are listed as ship stations; this number is nearly four times the total ships which were licensed before the war, which indicates the growth of radio on the high seas.

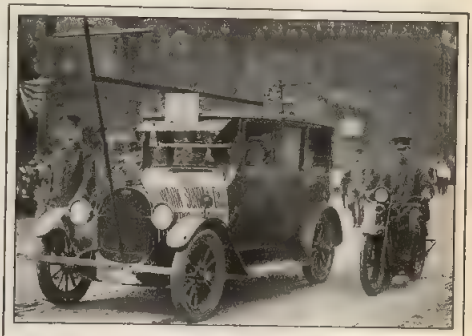
"The radio telephone is rapidly coming into ordinary business life:

"Among the 32 new broadcasting stations licensed recently, Los Angeles secured eight, including one license for a laundry and dye works.

"St. Louis opened three stations, one of which is operated by the local Chamber of Commerce; six newspapers took out broadcasting licenses, bringing the total number of daily papers sending news and entertainment to 24.

"Of course there are many radio corporations, electrical manufacturing equipment companies sending entertainment, but there are also hardware and departmental stores, oil, stone and motor dealers, as well as chambers of commerce, municipalities, churches and colleges."

The Newark *Call*, which has been making a new practical use of the radiophone that is shown in the accompanying illustration, tells as follows of the interest in American broadcasting methods that has been manifested in England, and of the British attitude toward what they regard as a quixotic project:



A NEW PRACTICAL USE OF THE RADIOPHONE

Reporters of the Newark (N. J.) *Sunday Call* riding about the city and reporting a parade directly to the *Call* office by phone.

"English analysis of the radio situation in this country is that we have gone 'wireless crazy' and have lost all perspective of the basic economic principle of broadcasting. While admitting that the United States has opened to the world another new development and has done tremendous things with radio in the last half-year, English observers who have come over to this country to make a survey of our achievements insist that the principle along which we have been working is off balance because it is economically unsound.

"Britishers refuse to be taken on flights of fancy by the boundless public utility of broadcasting as a great medium for the dissemination of information and tenaciously cling to the theory that unless a charge for the service as now given can be made at the receiving end the cost of maintaining the service will continue to be a constant and increasing drain upon the transmitting agency with no revenue to offset it.

"In England, the control of radio receiving and transmitting stations, both amateur and commercial, is under the Post Office Department which has hobbled the amateur with such drastic restrictions that the development of the radio science has not been as advanced as on this side.

"The English press, attracted by the wide-spread interest in this country, has carried the awakening message to the British public, and a noticeable stir of radio enthusiasm is the result. However, there has been no broadcasting in England, due largely to the fact that the English interpretation of a broadcasting service is that it should be self-supporting.

"To make broadcasting self-supporting the Britishers believe that one special agency should be licensed to broadcast, and that

A SIMPLE VARIOMETER RECEIVING SET

MUCH OF THE COMPLAINT about interference that comes from novices in radio receiving is due to the use of tuning devices that are not sufficiently sensitive. In the usage of the experienced amateur, the type of tuning coil known as a variometer has pretty generally taken the place of the single-tapped induction coil and the familiar loose coupler. A tapped coil serves very well where it is not necessary to distinguish too closely between wave systems; but may prove inadequate when really nice discrimination is in question. The variometer, consisting essentially of two coils, one of which rotates on its axis within the hollow of the other, permits the most infinitesimal gradation of adjustments. In one position, the two magnetic fields coalesce and mutually strengthen each other; as the inner coil is rotated, the mutual relations of the magnetic fields are indefinitely modified and at 180 degrees they are fully opposed. The inductance of the antenna system is thus shifted from minimum to maximum, tuning for waves of all available lengths, by merely turning the knob attached to the axis of the "rotor" coil.

Some of the most elaborate radio receiving outfits on the market use this system. One that has three stages of audio-frequency amplification has carried automatic control of rheostats and condensers to such a stage that nothing whatever is required of the perator who would "listen in" but to turn the pointer on a single dial, thus operating the variometer, guided solely by results. You have merely to turn the pointer until the sound you wish to hear is loudest and clearest—and then sit back and listen. Once the pointer is adjusted, it may be left there, and if you wish to listen to the same station on another evening, all that is necessary is to push a button, just as you turn on an ordinary electric light.

An article by Mr William F. Crosby, in *The Modulator* (New York), tells how to make a very simple set with variometer for tuner. Here is the description:

"By referring to the accompanying diagram it will be seen that this set is about as simple as it is possible to make a set that will really work well. The set consists primarily of a good make of crystal detector, a variometer and a small variable or fixt condenser. The phones and the wire for the aerial will also have to be purchased.

"It is best to buy the variometer, altho it is not much of a job to make one from two cardboard tubes. One of these tubes will have to be small enough so that it may be turned all the way around inside the larger one. The large one will have to be about three and a half or four inches in diameter and about two and a half inches long. These two cardboard tubes should be given a couple of coats of shellac and then wound with about 40 turns of No. 24 cotton covered wire. A shaft will have to be run through the center of these tubes in such a way that the large tube is stationary and the small one turns. It will simplify matters if, when winding the wire, a space of about a quarter of an inch is left in the middle of each of the tubes to allow the insertion of this shaft. The shaft should be made of brass and it may be left long enough so that a knob of some sort can be fastened on the outer end.

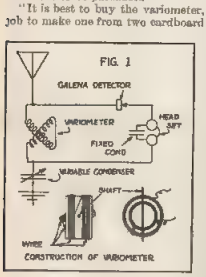


FIG. 1
CONSTRUCTION OF VARIOMETER

"This variometer will not be quite as good as the ones purchased in the radio stores, because the windings will have a greater degree of separation, but it will work good enough for a set that is only going to be used for a short-distance reception.

"The variable condenser had better be purchased, as this is very difficult to make. A small fixt condenser may also be used in this place, but the variable condenser will give the best results, as it allows the operator to tune the set better. Another small fixt condenser should be connected across the receivers.

"After the parts are all together, wire them up as shown in Fig. 1. The whole set may be mounted in a small cabinet if the maker so desires. All connections should be soldered and ordinary No. 18 bell wire will do for wiring."

MORE AND MORE INDOOR AERIALS

REPORTS CONTINUE TO COME from Washington of experiments by the Bureau of Standard experts with various types of loop aerials. We learn of one aerial only nine inches across, and another about six feet, both of them said to be capable of intercepting messages from across the ocean. At this season in particular the loop aerial makes appeal because of its virtual elimination of "static." And it is not the government experts alone who are experimenting. Many amateurs in all parts of the country are testing the loop in one form or another. The New York *Globe* tells of apparently successful experiments to extend the application of the indoor aerial to the receiving outfit using only a crystal detector. Needless to say, the Bureau of Standards experiments, and those of most amateurs, have been made with vacuum tube (triode) detectors. Indeed, it has been accepted almost as axiomatic that it is necessary to employ amplifying tubes (usually involving several stages of radio frequency), to make amends for the relative insensitiveness of the loop. But this necessity does not seem to apply to the form of loop used by the experimenters to whom *The Globe* refers:

Copyrighted by Underwood & Underwood

NINE-INCH COIL HEARS EUROPE

This coil antenna, made at the Bureau of Standards, at Washington is but nine inches square yet when hooked up with extremely delicate receiving apparatus will detect radio signals from Europe.

"Amateurs of Elizabeth, N. J., which is a hotbed of radio activity, are frankly skeptical of the experts' repeated statements that indoor aerials won't work with crystal sets.

"Martin J. Corcoran, principal of the Boys' Vocational School, and one of Elizabeth's foremost radio experimenters, is one of them. Mr. Corcoran, after trying out both kinds, announces himself as in favor of the indoor variety for crystal as well as bulb sets. He states that his conclusion is based on his own experiments and trials made in Elizabeth by his pupils.

"He explains that indoor aerials are found to be far superior to outside ones in cases where conditions are not ideal for the outdoor antennæ, where long straightaway stretches of wire can not be erected or where tin roofs or other objects which lessen an outside aerial's efficiency can not be avoided.

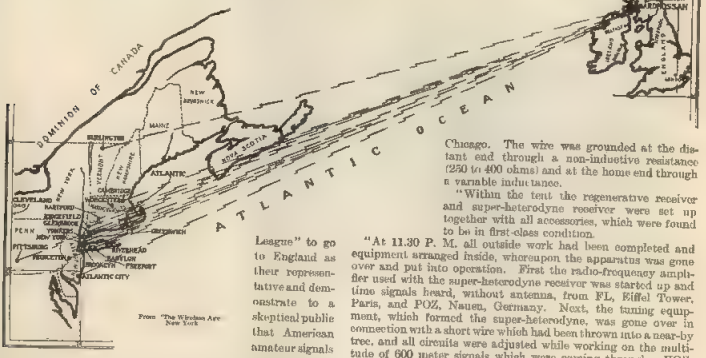
"Mr. Corcoran reports that in his own case, a continuous wire, 144 feet long, strung in four lengths in his attic, with one end leading to his set, gives him better results than he obtained with a 200-foot outside aerial. He states that he finds the efficiency of the indoor aerial is increased by running a loop from the free end to the section of wire leading from his receiving set."

RADIO · DEPARTMENT

RADIO AMATEURS SPAN THE ATLANTIC

THE AVERAGE RADIO AMATEUR may wisely be admonished to content himself with a limited range of transmission; but this is by no means to say that the exceptional amateur may not properly have long-distance ambitions. In an article in *The Wireless Age* (New York) which bears the suggestive title of "The Far Call," Mr. Paul F. Godley tells us that there are in America 20,000 radio amateurs whose interest in the transmission of small radio signals over greater and greater distances "transcends all else."

Mr. Godley should know, for it was he who was selected last autumn by a group of these amateurs constituting themselves "The First National Convention of the American Radio Relay League" to go to England as their representative and demonstrate to a skeptical public that American amateur signals could be registered across the Atlantic. Mr. Godley's task—which had for him "the romance of strange, fascinating, delightful adventure; a vision of the spirit of youth, vital eagerness, far-darting imagination"—began with the selection of the amateurs who were to send the signals from America that he purposed to catch up over there in Scotland



From "The Wireless Age" New York

"On November 1 (1921), the preliminary tests, which all were invited to enter, began, and the entrants transmitted on schedule each night up to November 5 in an effort to cover the distance of 1000 miles overland, failing which they were to be disqualified for participation in the main event. All my equipment was set for action, the super-heterodyne receiver being fed by a three-foot loop antenna. And what interest there was! Seventy-eight star stations scattered through every radio district worked to schedule with clock-like precision. Station 5ZA in Rosewell, New Mexico, consistently pounded in night after night on a four-ohm telegraph sounder by virtue of relays in the circuit. Those were the first thrills.

"Then came the night of November 14 with a farewell dinner, and with all arrangements completed, I sailed for England. Twenty-five contestants had qualified—two more were added later. At noon the following day the *Aquitania* slid down the North River, and I was off."

The ocean voyage with its "occasional snatches of 200-meter stuff"; the brief stop in London, where he "listened in on all the strange commercial calls up and down the European shores," and was distracted on settling down to 200-meters by "gobs and gobs of static and whole orchestras of harmonics"—these furnished interesting preliminary experiences, but the main adventure began at Androssan, Scotland, at an improvised station with headquarters in a tent pitched on a rather forlorn coast. Mr. Godley thus describes the final preparations and the moment of his triumph:

"On Wednesday, December 7th, the 1400 foot stretch of line was completed, the wire being supported by 2 x 4 inch posts 12 feet high, and laid out to point directly toward

Chicago. The wire was grounded at the distant end through a non-inductive resistance (250 to 400 ohms) and at the home end through a variable inductance.

"Within the tent the regenerative receiver and super-heterodyne receiver were set up together with all accessories, which were found to be in first-class condition.

"At 11.30 P. M. all outside work had been completed and equipment arranged inside, whereupon the apparatus was gone over and put into operation. First the radio-frequency amplifier used with the super-heterodyne receiver was started up and time signals heard, without antenna, from FL, Eiffel Tower, Paris, and POZ, Nauen, Germany. Next, the tuning equipment, which formed the super-heterodyne, was gone over in connection with a short wire which had been thrown into a near-by tree, and all circuits were adjusted while working on the multitude of 600 meter signals which were coming through. YCE, Cape Race, was there, and most as strong as any of them, and I took this as a good omen.

"Finally the beverage wire was thrown in, preliminary adjustments made at both ends of the wire, and tuning started, the first signals recorded being the host of harmonics from the high-power stations, altho these were not as bothersome as was the case near London. Search for short-wave amateur signals began at 1 A. M.

"At exactly 33 minutes later the universe cracked wide open! In one magic moment Scotland's erstwhile gloomy shores became a haven of rest! Muscle soreness, soul sourness, fatigue and doubt vanished, and my unexpectedly difficult but insistent duty became a joy forever!

"Cold rains then were as liquid sunshine; boisterous cutting winds as balmy, heaven-sent breezes. Nothing in the whole sad world could possibly be wrong—nothing, for an American amateur signal was piling in on us and rising in strength until at 1:42 in a very positive manner, his 60-cycle synchronous spark spelled out a message to some one that he would 'see him later' and plastered the call letters 1AAW where the whole world might read!

"On the night of December 9 the weather had again gone very wet, and the winds had grown considerably heavier. Atmospherics were also heavier than the night before, being of about the same order as on the night when 1AAW was heard. At 12.50 A. M. on the morning of the 10th, after listening for sparks, we switched for continuous wave reception and immediately picked up station 1BCG (Greenwich, Conn.) on 230 meters. We had some difficulty with him due to atmospherics and a

very bothersome harmonic from the station at Clifden, Ireland, 150 miles away. Both these were nullified to a great extent by various adjustments of both the apparatus and the line wire.

"On the night of December 10-11, 18 different stations were logged, the secret code words being gotten from three of them, while dozens more were heard but not logged, either due to our inability to make out their weak signals through static—because of the number of stations working at one time and the resultant jamming—or because of the failure of stations, working locally to use their station calls when transmission was ended.

THEIR STATION WAS HEARD IN SCOTLAND.

Here are the men who sent the message that was heard in Scotland. Behind them is their station. From left to right they are: Amy, Grinan, Burghard, Armstrong and Cronkhite. Their call and a complete message were the first to be received in Scotland from America.

"The most remarkable feature was the strength of some of these signals. 1 BCG's signals could have been heard easily 400 feet from the tent. Altho we started out to see how far away he could be heard, we gave the idea up because of the rain which was coming down, and because of the time which would have been taken. 1ARY and 2FD (and later 2FF) (Burlington, Vermont; Flushing, N. Y.; and Brooklyn, N. Y., respectively) almost equaled 1 BCG as to strength, during one or two very short intervals. 1BDT (Atlantic, Mass.), a spark station, altho by no means as strong, almost equaled 1 BCG in steadiness of signals during a long period. Two of the continuous wave stations were using powers of less than 30 watts!"

The climax came on the morning of December 12, when, after hearing signals from dozens of stations at the same time, the eager listener caught a worded message, assuring him "hearty congratulations" from the Greenwich, Conn. station, 1BCG, signed with the names of its owners and operators: "Burghard, Inman, Grinan, Armstrong, Amy, Cronkhite." That was the first message ever sent across the Atlantic with amateur radio; and no readable signals from American amateurs were heard during the remainder of the tests. Presently atmospheric conditions ceased to be propitious, and the coming of a cyclone made it necessary to dismantle the tent on the afternoon of the 16th.

On the 19th Mr. Godley was back in London, and found that great enthusiasm was being shown as a result of the tests. "Station 1BCG had been heard by five British amateurs, by a Dutch amateur in Amsterdam, and by an American ship operator in the harbor at Hamburg, Germany, and all the newspapers in Belgium, France, and the British Isles were featuring the story."

Mr Godley goes on to say that British Amateurs had heard signals from Salem, Cambridge, and Marion, Massachusetts; from Hartford, Connecticut; from Brooklyn, New York, and Valley Stream, Long Island; and from unidentified stations. He gives the complete list of stations heard by him at Adrossan to the number of about thirty, mostly located along the Atlantic seaboard, but including such interior stations as Burlington, Vermont; Cleveland, Ohio; Pittsburgh, Pennsylvania; and Indianapolis, Indiana.

Notwithstanding the fact that two of the most distant stations, Cleveland and Indianapolis, used spark-wave transmission, Mr. Godley has very pronounced opinion as to the superiority of continuous-wave transmission, as will appear from his concluding words:

"In glancing over the above list one is struck by the preponderance of the continuous-wave stations, and by the fact that the British heard C. W. stations only. That can mean only one thing, that C.W. is far superior, and I should like nothing better than to see all amateurs change over to continuous wave at once. Spark methods are horribly out of date, and are so inefficient, comparatively, as to be ridiculous, were it not that many have invested good money in spark equipment. Station 1AFV (Salem, Mass.), since the tests has gotten three messages across to England (Scotland) on 200 watts of C. W. Many stations of the Atlantic seaboard are reaching to the California coast with similar powers, while the west coast stations have been shoving signals into the Hawaiian Islands. The day is not far distant when amateurs the world over will be exchanging greetings in many languages, and by the same token, the day is almost here when the spark stations will be of interest as having to do with history only."

PACIFIC COAST RADIO

IF THERE WERE ANY QUESTION that the interest in radio is country-wide, an editorial comment in *Rosin*, the San Francisco periodical (which began life about four years ago as *The Pacific Radio News*), would put to rest all doubts. Evidently the Pacific coast amateur is quite as well served as he of the Atlantic seaboard. Witness this comment:

"There is radio music in the air, every night, everywhere. Anybody can hear it at home on a receiving set, which any boy can put up in an hour. One of these sets costs less than a phonograph. With it can be heard grand operas, orchestras, phonographs' music, market reports, press summary, sermons, and speeches. All that is needed is a hundred-foot clear-span of copper wire, a couple of batteries and a cabinet set that can be bought from a radio dealer in every town.

"No better investment can be made as to a means for making a home more attractive to the entire family. Radio brings fathers and sons together on a common basis of mutual interest. The women can easily run in during the afternoon and have a constant source of entertainment for their guests. Any phonograph selection will be played by request to the operator in charge of the sending station. No home is complete without radio."

MR. GLAVIN'S RADIO CAR

UNDER THE PICTURESQUE TITLE "The Wireless Hound—An Interesting Case of Radio Control," the *Scientific American* (New York) some months ago described a curious little vehicle which more recently has been exhibited at the Radio Conventions at the Hotel Pennsylvania, New York, where it excited the wonderment of thousands of observers. After stating that ever since Marconi succeeded in getting a coherer to work by means of wireless waves, so that distant circles might be controlled as desired, men in various countries have been planning and experimenting with radio-controlled craft of all kinds; and, referring to the radio-controlled motor boats of John Hays Hammond, Jr., and to Herr Fokker's plan for crewless airplanes, the account continues:

"Now comes Edward F. Glavin of Yonkers, N. Y., with a radio-controlled vehicle which represents nine years of persistent effort and experimentation and numerous disappointments, all blended into the practical working model which is shown in the accompanying illustration. Mr Glavin has succeeded in applying the principle of radio control to a land vehicle, which is considerably more difficult than that of aquatic craft.

"The 'wireless hound,' as this bizarre vehicle has been termed by those who have seen it going through its antics, is driven by an electric motor. The vehicle has four wheels—one in front which does the steering, two wheels which turn freely on a fixt axle, and a center driving wheel. The electric motor is mounted on a pivoted frame in such a manner that its weight is brought to bear on its rubber-faced pulley pressing down on the driving wheel. Storage batteries furnish the current for the motor as well as for other purposes.

"The control is of consists of the usual tuned transmitter a spark coil, telegraph key, oscillating circuit, and aerial. Each time the key is depressed, a train of signals is sent out to the aerial of the wireless hound. Each train of signals causes the detector to respond, operating a relay and closing a secondary circuit in conventional way. The secondary circuit makes use of a control or contact drum carrying various brass strips which, when turned, make various combinations of circuits in conjunction with the brushes or fingers pressing down on them. Thus in the first position the contact or control drum may make the necessary connections for starting the motor. The next position operates part of the electromagnets controlling the steering-wheel, so as to turn the vehicle to the left, while the next position restores the steering-wheel to the normal position and the vehicle straightens its course. The next two positions turn the vehicle to the right and straighten it out. Perhaps the next position stops the vehicle. At any rate that is the way the control operates."

'THE WIRELESS HOUND.'

A radio-controlled vehicle which obeys its master's wireless commands. The inventor is here seen explaining how it works.

Details of operation aside, the little car rolls about in any desired direction in response to signals given by the hand of its inventor and translated into electromagnetic radio waves by an assistant who presses the telegraph key. The performance is in a sense simple when explained, yet it always seems mysterious. It may reasonably be expected that before long the principle will be applied to some types of commercial vehicles, tho the limitations of the method are obvious, in as much as the operator must keep the controlled mechanism within view. It has been suggested by Mr. Glavin that wheeled apparatus on farms—including motor-drawn plows, reapers, and the like—may perhaps be operated by radio. Meantime the writers of fiction have taken slight liberties with the future, as when Mr. Stoddard Goodhue, in his story called "The Phantom Auto" in *Everybody's Magazine* makes Mr. Glavin's invention the background of a series of episodes in which automobiles are controlled by radio operated from an airplane. Almost any day we may see that feat accomplished in the world of fact.

RADIO BELOW 275 METERS

NOW THAT THE AMATEUR KNOWS just where he stands, it obviously behooves him to inform himself fully on the subject of waves between 275 and 150 meters. In an article in *Q S T* (Hartford, Conn.), the official organ of The American Radio Relay League, Inc., Mr. Boyd Phelps, 9ZT, has things to say that should interest all amateurs who are not already proficient in the art of sending short waves. Mr. Phelps makes a plea for diversity of wave-lengths, regarding it as "ridiculous that out of the immense number of possible adjustments we should all strive for the same one." And he gives some very practical details as to the way in which the "crowding on and just above 200 meters" may be avoided:

"The chief difficulty in the minds of many is the thought of having to use an antenna only a few feet long and perhaps not extending up high enough to clear surrounding objects. The following methods worked out by the writer obviates this great disadvantage.

"An antenna with a fundamental of 300 meters when excited by a straight gap was found to emit waves on 300, 100, 43, and 33 meters. It was only necessary to excite the aerial at one of its harmonic frequencies to have it absorb and radiate energy on that wave. It was found that the ratio of one to three does not hold between the harmonic and the fundamental when the aerial is loaded. At 9FO with the large antenna having a fundamental of 450 meters the use of a series condenser was impractical for 200 meters. All of the secondary of the oscillation transformer was inserted, bringing the wave up to 525 meters; the first harmonic then increasing to 169 meters as determined with a spark gap in the ground lead and a spark coil connected across this gap. With the closed circuit carefully tuned to 169 meters and coupled to the antenna circuit good radiation was obtained on this wave-length. Moving any clips on the oscillation transformer caused a falling off of antenna current. With the wave meter coupled to the ground a sharp wave was found at 169 meters, but no matter how close the wave meter was coupled to the aerial circuit no wave could be found around 525, which was the normal wave-length of the open or aerial circuit. This new method permits easy working on 200 meters and below with a large aerial.

"It is perhaps not well to encourage the above experiments too much, especially in coastal cities, as inaccurate adjustments may cause a strong wave to be emitted at about 600 meters. The real value of this method of tuning comes in the use of continuous wave. A vacuum tube, we are told by many eminent experimenters, will in laboratory circuits oscillate at wave-lengths of five meters or less. Tuning is extremely sharp at low wave-lengths so that more stations may be accommodated at wave-lengths differing but few meters."

RADIO · DEPARTMENT

RADIO FROM AN ELECTRIC-LIGHT SOCKET

GREAT INTEREST HAS BEEN AROUSED by the newspaper reports of a successful experiment of Maj Gen. George O. Squier in the utilization of an ordinary electric-light system for the dissemination of radio messages. General Squier made a demonstration before a number of experts in his office, in which he attached a radio receiving telephone set to a socket of an electric light on his desk. By merely pulling the lamp cord, the General started and stopt the messages

In *Popular Radio* (New York) we find this description of the interesting test

"The demonstration included the receiving of news, music and talks from a distant room in the Munitions Building, where a radiotelephone transmitter (S C R 67) was connected through an ordinary socket to the lighting circuit of the building. Music from a phonograph was transmitted to the 110-volt electric line through a standard microphone such as was developed during the war for aviators.

"There is no interference, no fading, and weather does not affect the broadcasting by this new method. The process is based on General Squier's invention of 'line radio' or 'wired wireless' which he perfected some time ago and which permits the use of a line as a guide, altho the messages go on wireless waves which follow the line. The turning of the switch, however, cuts the circuit, and the sound ceases.

"Future uses for the new invention suggests that a hotel can supply all of its guests with music from a sending station in the basement; a single orchestra can furnish music for the local playhouses and movies, and invalids at home or in near-by hospitals can get such entertainment as is furnished locally. 'Every home and every room in a hotel where there is an electric lamp can now keep in touch with the world,' General Squier said

The qualifying statement is made, however, that experts are doubtful whether the system can be used over the large lighting cables in city streets; and amateurs are advised not to play with this new idea until they have more definite information on the subject. Meantime the new experiment gives added interest to the remarkable "wired wireless" method. Another article in *Popular Radio*, by Dr. Henry Smith Williams, tells how General Squier came to develop this method as a war emergency. The U. S. Signal Corps had been called upon by the Allied Council to furnish 100,000 miles a month of insulated telegraph and telephone wire, and no such quantity could be produced, chiefly because there was lack of adequate machinery to make the braided covering for the wire.

"Confronted with this situation, the United States Signal Corps, with General Squier at its head, not unnaturally realized the desirability of finding a substitute for braided cotton thread.

"The Signal Corps found it. Indeed, it found something not merely 'just as good,' but in many respects vastly better. Confronted with the shortage of braiding machines, General Squier said in effect: 'Let us try electron tubes instead.' Asked to supply 100,000 miles of braided cotton a month, he said: 'I will give you an unlimited quantity of electromagnetic waves instead.'

"Succinctly stated, what General Squier did was to run a bare wire of phosphor bronze across the Washington channel of the Potomac River from the Army War College to the opposite shore in Potomac Park, letting it sink to the bottom and lie there absolutely unprotected. A standard Signal Corps radiotelephone and telegraph set was directly connected to each end of the wire; one set served as transmitter and the other as receiver. At the receiving end, the bare wire was directly connected to the grid terminal of an electron tube of the receiving set and the usual ground connection was left open. Tuning a wire to a frequency of about 600,000 cycles a second, excellent telegraphy and telephony were attained.

"Sundry other confirmatory experiments having been made with a submerged wire, attention was directed to the possibility of conveying a directed message along a wire lying on the ground. A bare No. 16 wire was laid on the surface of the earth connecting the main laboratory with the Signal Corps and a small field station one and three-quarter miles distant. Radiotelephone instruments used were standard sets utilizing an oscillating transmitter of the electron tube type. It was found that good telephone communication could be made with this equipment.

"As the next important step, the bare transmitting wire was buried in the earth to a depth of about eight inches. The soil was moist, sandy loam, only a few feet above tide-water. The wire thus buried conveyed the electromagnetic current as before, and satisfactory communications were established for the distance of about a mile. To make the experiment more definitive, tests were made with the buried wire not laid in a straight line, but turning in various angles.

"The successful termination of the experiment may be said to have established the principle of 'wired wireless' beyond controversy. It is obvious to any one familiar with the general principles of radio transmission that it should be possible, by using different wave-lengths, to send several messages simultaneously in either direction along a single wire, each message indistinguishable except to the particular instrument tuned to receive it. Practical experiment was presently to demonstrate the validity of this assumption."

Such, then, is the method for which its originator suggests a new and highly important practical application. It will be understood that the wires that follow along the wire do not con-

RADIO BROADCASTING OVER ELECTRIC LIGHT WIRES

General Squier, the inventor of "wired wireless" and Chief of the Signal Corps of the U. S. Army, is here seen receiving music and messages from an ordinary electric light socket by another new process he has perfected

stitute an ordinary electric current, but are the electromagnetic waves of radio, not traveling on the wire itself, but for some strange reason holding to a channel of ether which has the effect of a tube about the wire, and thus being directed to a particular goal instead of being dissipated into space in every direction.

It is suggested that there are great possibilities of conservation of power in the method, and that the problem of interference of waves conveying different messages in the air is virtually solved by "wired wireless." Should it be found that the ordinary electric light wires which run out from a power station and branch perpetually to reach multitudes of homes, can be used effectively to distribute radio messages, broadcasting will take on new aspects, and is assured a greater importance in community life than even the most sanguine of enthusiasts had hitherto predicted for it.

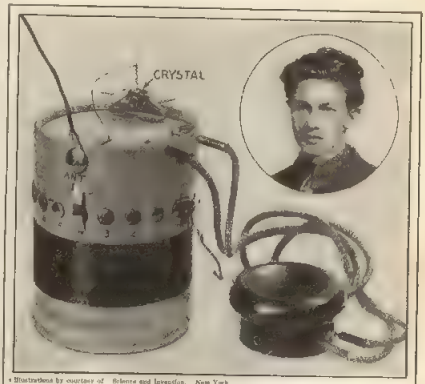
THE SIMPLEST RADIO RECEIVER

NOT LONG AGO A PRIZE CONTEST was instituted by *Science and Invention* (New York) the intention of which was to stimulate ingenious persons to devise the simplest possible of radiophone receiving sets. "What was wanted," the editor explains, "was an outfit that could be made by any one without knowing anything whatsoever of radio mechanics. We wanted an outfit that could be made from scraps lying about in almost any home, and from things that could be procured readily without making special fittings, etc."

The response demonstrated anew the wide interest in radio. Over eight hundred manuscripts were received, and more than one hundred models of outfits. Men in all walks of life competed, and four articles with models were received from women. The smallest outfit was wound upon an ordinary thread spool and did not weigh more than one and a half ounces. The first prize was awarded to "a young New York genius of twenty-one," for an apparatus which the editors declare to be, in their opinion, "the simplest outfit that can possibly be made." There is further editorial assurance that this is a complete and practical radio-receiving telephone apparatus, which works well, the cost, without the telephone receivers, was less than forty cents. The inventor tells us that a knife or razor blade and a small nail are the only tools required to make it, and he declares that the complete set can easily be constructed in about half an hour, and that it is "as efficient as most of the crystal sets now being sold and in most cases superior to them." The editors express the hope that those laymen who are still skeptical as to radio will find time to build the outfit. Here is the inventor's own account of the way to make this simplest of radiophone receivers:

"The material required is as follows:

1 paper container (4" in diameter)
13 paper-fasteners (small size)
2 paper-fasteners (large size)
3 paper clips



Illustrations by courtesy of Science and Invention, New York

JAMES LEO McLAUGHLIN AND HIS PRIZE OUTFIT

It can be made in thirty minutes, he says, with a knife or razor blade and a small nail, and is "as efficient as most of the crystal sets now being sold." Aside from the phones, it cost less than forty cents

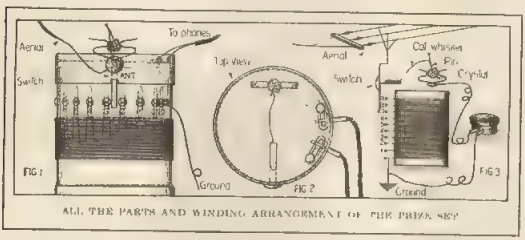
2 oz. No. 26 enameled copper wire
1 small piece of silicon or galena
1 common pin

Take the container and punch nine holes one inch down from the top, with a small nail, one-half inch apart. Into each hole push a paper-fastener. With pen and ink number each fastener from right to left, 1 to 9. Alongside of hole No. 1 push two fasteners with a paper clip underneath -mark GND (ground). One-half inch down from GND punch a small hole, this is the starting point of the coil.

"Take the wire and push the end through the hole. Wrap the end around one of the fasteners GND (on the inside of the container). Be sure that where the wire touches the fastener, the enamel has been scraped off or else a poor connection will result.

Next pull the wire tight and commence winding the coil. The total number of turns is seventy, and a tap is taken off at each of the following turns: The 15th, 20th, 30th, 40th, 50th, 55th and the 70th.

"Fig 1 shows how to tap the coil. The important things to look out for are that the coil is wound as tight as possible, and that the enamel is scraped off the wire, where it makes connection with the fasteners. The 15th turn is contact No. 1, the 20th No. 2, etc. The next job is the switch that moves over the contacts. Fig 2 shows how this is made. Take one of the large



ALL THE PARTS AND WINDING ARRANGEMENT OF THE PRIZE SET

fasteners, push the ends through the side of the cover, close to the lid. Bend one end down flush with the side and push the other end through the top and bend over.

"Put the cover back on the container and bend the end of the fastener so that it rides over the contacts easily, when the cover is turned, but be sure that it touches each of them. Break off the surplus end.

"The other large fastener is pushed through the lid opposite the switch and is bent, as shown on Fig. 2, so that it can hold the small crystal. A short piece of bare wire (about No. 24 will do) acts as the cat-whisker, a pin is fastened to one end and the other end is wrapt around the end of the switch—the part that is bent over (see Fig. 2)

"Fig. 3 shows the diagram of connections and needs little comment.

"The telephone receiver is a single Murdock without head

FARM LIFE ISN'T WHAT IT USED TO BE

Grandpa listens in on the wireless to "Old Dan Tucker" and "Turkey in the Straw."

Doubles in the Cleveland *Plain Dealer*

band, and can be purchased for about $2.00. Of course any other kind may be substituted.

"For the antenna one-half pound of No. 18 bare copper wire will do. This will give about 100 feet of wire. Two porcelain cleats will also be required and should not cost over 5 cents. The wire can be had for about 30 cents.

"String the wire the greatest length possible, and attach outer end to a tree or other elevation, at least thirty feet high. The other end of the wire enters the house and is attached to the switch button marked ANT and a short piece of rubber tubing should be slipped over the wire where it passes through the wall of the building.

"A good ground can be had by connecting a wire to the nearest gas or water pipe. Scrape the pipe for a length of about two inches, so that it shines, then wrap several turns of wire around it and twist tightly.

"To operate the set, bend the cat-whisker wire so that the pin rests on the crystal. Move the pin over the surface until a signal is heard; at the same time move the switch over the contacts, and leave it on the one that brings in the station the loudest. With this set in New York City using only a single No. 24 wire, 25 feet long strung up in a room, WDY'S and WJZ'S concerts came in fine, and on several occasions, the phone could be held about six inches from the ear and still the music and voice could be distinguished."

HOOKED UP WITH THE WORLD

NOT INFREQUENTLY WE HEAR the opinion exprest that the present extraordinary vogue of radio represents "a craze that can't possibly last." The holder of this opinion is usually a city man who has some friends with whom the receiving telephone is probably little more than a toy. Many such there are, doubtless. But the future of the receiving telephone in the home does not rest primarily with the city dweller who is within easy reach of numerous entertainments. It rests with the residents of the villages and with a farm population numbering thirty odd millions. Here are people who can not step round the corner to an entertainment, nor gain the news from an evening paper.

But now the radiophone brings news and entertainment into their homes. An inkling of what this means may be gained from an account of the personal experience of a Kansas farm boy, named Hugh Stout, as related in the *Kansas Farmer* (Topeka). It is a matter-of-fact recital, yet even five years ago it would have seemed like a fantastic dream. The youth who is speaking lives away out in Kansas; but in his daily experiences he is a cosmopolite. Let him tell the story:

"We have been using a radiotelephone receiving set for about a year and have been regularly receiving market reports, concerts, news items, conversations between operators, reports of stolen automobiles, descriptions of men hunted by the police, and a number of other things. On the evening of February 24 we heard an organ recital from a church in Pittsburgh, Penn., and a concert given by the *News*, of Detroit, Mich.

"The stations which we can hear best are Pittsburgh, Detroit, Kansas City, Denver, and Madison, Wis. We also hear occasionally from Oak and Wahoo, Neb., Slater, Jefferson City, Mo., St. Louis, Mo., Chicago, Ill., Dallas and Childress, Tex., and from our neighbors at Wichita, Great Bend and Kiowa, Kan. We get the correct time twice a day from Annapolis, Md.

"The set which we have is mounted on a wall board panel which is fastened to a wooden box containing a type 'B' battery for the audion tubes. The tuning portion of the apparatus consists of a three-coil mounting and two sets of coils and two variable condensers. One set of these coils is for the radiotelephone and all stations using a wave-length ranging between 180 and 450 meters. Two of the coils have 35 turns of wire, while the third one has 25 turns. The other set of coils is for receiving messages from air stations using a wave of from 10,000 to 20,000 meters in length.

"For a detector we have a Cunningham detector tube. The control for this detector consists of a rheostat, a type 'B' battery switch and a fixt grid condenser. We use a Radiotron amplifier tube with a transformer and socket and a rheostat to control the current to the filament in the tube. We use two sets of 3 000 ohm receivers.

"The aerial is made of three wires about 125 feet long and 25 feet high. We have found that by using the telephone line in place of the aerial and the aerial in place of the ground, we get better results and have less interference from static electricity. This will not always work on all stations as it changes the wave-length of the receiving set.

"A set like the one we describe will receive messages from radiophone broadcasting stations and from spark wireless telegraph stations. It would cost a little more than $60 with a 6-volt storage and a 60-volt dry-cell battery. We use a number of flashlight batteries connected together in series.

"We did not make up any of the units of this set which we use because we think that factory-made instruments are more satisfactory since they have been made by experts and have been tested before being sent out. The units which we now have we mounted on the panel ourselves, but we had some help in hooking them up properly.

"The other evening we had some guests here at the farm and all of us listened to a splendid concert by a symphony orchestra in Chicago. At 8:55 I changed the coils on my set for those adapted to the greater length waves and tuned up for a message from Annapolis which sends out the time every evening. For five minutes before the hour, the Annapolis operator dispatched a continuous signal that sounded like a mechanical hum, each variation marking the elapse of a second. At exactly the hour the sound stopt for an instant and the listeners set their watches to Government time sent 1,000 miles through the air.

SCIENCE AND INVENTION

THE LIGHT CURE

TREATMENT of disease by light-rays is reviewed in an editorial contribution to *The Journal of the American Medical Association* (Chicago). The writer is somewhat cautious in commending it, but thinks that it has been undoubtedly beneficial in some maladies, and that it has possibilities. That sunlight is beneficial to green plants, he notes, is an every-day observation. Through the intermediation of chlorophyl (green vegetable coloring matter) light energy is stored under conditions most advantageous to mankind. There is a wide-spread conviction that sunlight is health-giving to man as well as to vegetation; but proof of this traditional belief, he thinks, is not so easily secured. He goes on:

Sunlight is only one of numerous environmental factors to which the human organism is subject, and they can not readily be dissociated so that each can be charged with its specific responsibility for well-being or the reverse, as the case may be. It would be manifestly unfair to say that heliotherapy (sunlight treatment is an entirely unexplored field; but it will scarcely be denied that its present claims and its accomplishment are essentially based on empiricism. To admit this is not derogatory to the possibilities of medical treatment through the agency of light rays, but rather a challenge to promote the scientific aspect of the subject. The latest studies of the sunlight treatment of rickets, notably those of A. F. Hess and others in this country, should give a marked impetus to the investigation of the physical factors as well as the clinical results

The instance cited is a notable one for heliotherapy. Clark has suggested other fields in which the already evident possibilities of light therapy deserve experimental consideration from a clinical standpoint. The pioneer work of Finsen emphasizes the importance of considering a diversity of forms of radiant energy in skin affections. The relative safety of treatment with ultraviolet rays over roentgen-ray exposure should add to the desirability of careful consideration of the respective merits. In tuberculosis, especially surgical tuberculosis, heliotherapy has long had advocates The observations made have warranted the suspicion that light of short wave-lengths, which is known to have marked bactericidal effects, may not be without salutary influence in the treatment of wounds. Other suggestions might be cited, while the familiar inflammatory reaction known as sunburn is an omnipresent reminder of the potency of absorbed ultraviolet light. It should be remembered that the potent rays of shorter wave-length do not penetrate glass. The shorter the wave-length, the smaller the layer of skin that will absorb the rays. Artificial lights, if glass-covered, are therefore harmless and therapeutically weak. Sunlight rarely contains enough for ultraviolet rays to produce injury. Consequently, heliotherapy that demands highly potent effects must look to artificial sources of radiation. The quartz mercury arc and bare metallic arcs are known to belong in the potent class, and as has often been warned, may be extremely injurious so that the eyes should be protected from them

With the Kiddy's Toys

Take home a Handy Oil Can of 3-in-One and present it to Son with his mechanical toys at Christmas.

Show him how 3-in-One will make everything run smoothly and with less noise. It will be a priceless lesson to him in the value of lubrication. Later he will be saved the necessity of learning by costly experience, the need for properly oiling his tools, his bike, and later, his auto.

3-in-One

The High Quality "Men's" Oil

Every little man, and every big one, has constant use for 3-in-One, for lubricating, cleaning, polishing and preventing rust. It's good oil, pure oil—free from grit and grease. Won't gum or evaporate.

There is only one 3-in-One—the most widely used bottled oil in the world. Ask for it by name and look for the Big Red One on the package.

Sold at all good stores in 1-oz., 3-oz. and 8-oz. bottles and in 3-oz. Handy Oil Cans.

railroad to a comfortable twenty-four-hour ride. This will mean in the not distant future a large tourist travel. The impressive grandeur of the scenery all along the route is alone enough to insure this."

The Alaska Engineering Commission under whose jurisdiction the road is being completed thus sums up its attractions:

"Seward on beautiful Resurrection Bay, surrounded by picturesque mountains, forests, and trout streams; Spencer Glacier with its vari-colored ice masses pushing down within a few hundred yards of the railroad, Anchorage—at the head of Cook's Inlet—the railroad headquarters and outfitting point for many trips of interest; Mount McKinley, monarch of North American mountains, tossing its snowy crest four miles in the air, visible for 300 miles on the railroad; Mt. McKinley National Park, 3,000 square miles of untouched nature, the center of an unsurpassed wild game country, reached from McKinley Park Station."

President Harding's contemplated trip to Alaska in August will include something in the nature of a formal opening of the railway. Through trains are now operated between Seward and Nenana with buffet, observation cars and, as planned, with sleepers during the coming summer. The uncompleted bridge crossing the Nenana River at Nenana necessitates the only break on the line, the river now being crossed by ferry. At Seward, Anchorage, Nenana and Fairbanks will be found hotels far above the average for small towns. They are equipped with electric lights, steam heat, baths and other modern improvements. For complete steamship service to Alaska our readers are referred to table, page 77, "Pacific Coastwise Routes."

THE LURE OF HAWAII

Writing of Hawaii in The London *Times*, Lord Northcliffe recently said:

"No matter what sort of fairyland you have imagined Hawaii to be, no matter what colorless, anemic pamphlets you may have read of it on the way there, its magical reality far and far exceeds its advertised charm. . . . It is just a scrap of Paradise dropt down by a lucky fluke into the middle of the Sea of Endless Summer."

Cooled by the steady, northeast trades sweeping over countless miles of the Pacific the summer temperature of Hawaii is delightful. Indeed as Leland E. Cofer, Assistant Surgeon-General, U. S. Quarantine Service has written:

"The usual medical 'don'ts' do not apply to Hawaii's climate. The influences in these beautiful islands offer the least resistance to bodily well-being of any well-known health resort of the world."

SPORTS ▾ AND ▾ ATHLETICS

A THRILLER THAT IS BECOMING MORE AND MORE RARE.

"The stolen base is the most perfect example of the unexpected It enables a player to be a thinking human being, not a mere cog in a machine."

BASE-STEALING'S SENSATIONAL DECLINE

ALTHO IT HAS ALWAYS BEEN the showiest feature of baseball and perhaps the most popular with grandstand and bleacher alike, base-stealing is undergoing what Mr. F C. Lane, a contributor to the *Baseball Magazine*, regards as nothing short of a "sensational decline."

Ten years ago base stealing was developing in both major leagues about as rapidly as fielding and pitching skill. For several years, as far back as we care to trace the upward trend, base-stealing totals were climbing, and then came the turning-point. Base-stealing declined for a number of years, crept down the slope just about as rapidly as it had ascended. But this decline unfortunately did not terminate in another gradual incline. On the contrary it speeded up as it progressed, so that the last few seasons have seen a falling off in base-stealing so pronounced as to prove alarming to any one who wishes to see baseball preserved as a game well rounded in every department.

No corresponding increase in batting or fielding can quite compensate for the deplorable shrinkage in the stolen bases.

The decline of the stolen base is not an incident to be brushed aside with a casual comment. In fact, it is not an incident at all. It is a steady and seemingly accelerating trend Base-stealing which a year ago had reached a point which we confidently hoped would be termed the zero mark has since that time sunk many degrees below that zero

The story of the rise and decline of modern base-stealing may be graphically traced in the records of fifteen seasons. At the beginning of this era, in 1907, the National League stole 1,380 bases. In 1908 that figure remained about the same, namely, 1,372. The following season it took a decided brace to 1,539. A year later, in 1910, it stood at 1,593, while in 1911, it reached its highest total, 1,691.

N neteen hundred and eleven was the red-letter year in National League base-stealing. From that date to the present there has been a pretty steady decline, marked by a few variations, slumping dismally to the abyss of the past two seasons. For example, five years after 1911, the base-stealing total had fallen off practically 500 bases and stood at 1,194. There was a temporary spurt the next year, succeeded by an even deeper depression in 1918. In 1920 the total slumped under the one-thousand mark to 969. And last year it ebbed still further to a meager 803

How melancholy is this showing may be better expressi in terms of percentage. The base-stealing total in 1921 was about 47 per cent. of the base stealing total in 1911. The intervening years had seen stolen bases decline by nearly 53 per cent. This is no mere fluctuation of one season contrasted with another, but a drastic decline which cuts to the very heart of base-stealing as a popular department in the game

To emphasize this decline still further, we might refer to the records of the individual clubs. For example, in 1912 the Giants, the league leaders in that respect, stole 347 bases. Last year the Giants were still league leaders, but against the shining total of 347, they presented a new total of 137, a falling off of 210 bases, or more than three-fifths. In 1911, the club which stood at the bottom of the list was Philadelphia, with 153. Last season Philadelphia also stood at the bottom of the list with 66. The tail-ender declined proportionately as much as the champion, but the tail-ender of 1911 far surpassed the champion of 1921

Even more deplorable, so Mr. Lane tells us, is the record in the American League, where base-stealing increased during the seasons following 1907 and reached its red-letter year in 1912, with a total of 1,809 stolen bases that season, but immediately began to decline.

Three years later base-stealing had fallen off by nearly 400 bases. In 1918 the total of stolen bases slumped below the one-thousand mark and has still further slumped through succeeding seasons. In 1920 it was down to 750. Last season it hit a low level of 693

Ten years have wrought a strange and ominous decline in the American League stolen base. That ten years has seen a total considerably higher than the National League total dwindle to a meager residue, considerably below the National League's low level. In other words, American League base-stealing has fallen from even greater heights to lower depths than has been the case in the National circuit.

The total last year, 693, is but slightly more than 38 per cent. of the total ten years earlier. In other words, ten years have seen American League base-stealing fall off nearly 62 per cent.

In 1912 Washington was the champion base-stealing club, with a total of 262. Last season by an odd fatality, Washington also led American League clubs with a total of 111 The tail end club in base-stealing in 1912 was St. Louis. But St. Louis in 1912 stole 176 bases, which was more than 50 per cent. increase over and above the showing of the champion American League base-stealing club in 1921

Prior to 1918, no club in the American League stole so few as 100 bases. Two hundred bases was a very common showing. Last year only one club in the American League stole as many as a hundred bases—the Washington club. Cleveland, which contended with the Yankees for the pennant until the close of the season and ranked as World's Champion by virtue of its victory the previous season, stole exactly 58 bases. Is there not something to cause concern in the trend of the game when the team that is considered the most powerful in either league steals a little more than half a hundred bases, approximately two a week for an entire club?

Still further light is shed upon this melancholy story by the records of the champion clubs in the American League. For

many years the leading club perforce stole considerably more than 200 bases. Had it failed to do so, it would not have been the champion. In 1913 American League base-stealing saw its leading champion, Washington, steal 288 bases. In 1918, the American League champion slumped under the 200 base total. In 1920, Washington, which again led, stole 160 bases which, compared with previous champions, was a miserable showing. But last year, Washington, though still retaining the championship, stole but 111 bases, the poorest showing of any base-stealing champion in fifteen years of major league history.

In the National League the rise and fall of base-stealing champions is much the same. In 1910, Cincinnati led the league with 310 stolen bases. In 1911, the Giants stole 347, the high water mark for a major league club of modern times. In 1920, Pittsburgh led with 181. Last year the Giants regained their leadership with 137, the worst record for a National League champion within the scope of our present investigation.

Where league averages and club championships so clearly mark the fall of the stolen base there surely must be individual records worthy to compare with those of former years. So we might hope, but such is not the case. Last year George Sisler led all other American League base-stealers with a total of 35. Not so long ago the man who stole 35 bases would be considered only fair. For eight straight years of the fifteen, the American League champion slumped under the 70 mark but once.

In the National League, Frisch with 49 stolen bases to his credit did measurably better. There have been other seasons when the National League champion stole even fewer bases, but on the other hand even 49 compares indifferently with the sixties and seventies and eighties of previous years.

The Giants in the past fifteen seasons have stolen more bases than any other club, namely 3,057. Cincinnati comes second, while the Detroit Tigers lead the American League with 2,794. For many years the Tigers were noted for their speed and daring on the base paths. And yet there is a striking contrast between 1915 and 1921 in Tiger history. Why do we mention those two particular dates? In 1921, Detroit, under the leadership of Ty Cobb, stole 95 bases. In 1915, Cobb himself, unaided and alone, stole 96. In other words, one player in a Detroit uniform stole more bases in 1915 than the entire Detroit club in 1921.

TY COBB STEALING A BASE

"There never was a more demoralizing influence to pitchers and infielders' nerves than Ty Cobb on first. Cobb in his prime was perhaps the best illustration of the potent influence of the star base-stealer.

The records show that National League base-stealing in approximately a decade has fallen off nearly 53 per cent. The same decade has seen a decline of nearly 62 per cent. in American League base-stealing. Specializing in generalities, we may say then that only one base is stolen on a major league diamond now where two or more bases were stolen ten years ago.

Confronted with these sensational figures, the baseball enthusiast will ask, naturally, what accounts for the slump they represent. In his effort to make his explanation entirely clear, Mr. Lane begins by reminding us that

> This admittedly is an impressive slump, but just what is its inner significance?

Baseball may roughly be divided into four departments—batting, base-running, pitching and fielding. The first two comprise the main elements of the offense, the latter two of the defense. Batting has always outclassed base running as the prime feature of baseball offense. But base-running has been a conspicuous and valuable factor none the less.

Of the two, base-stealing calls for the greater daring, the keener head work. Batting may be and generally is a thing of natural aptitude, based largely upon the batting eye. Base-stealing is a more varied talent and may be more readily acquired. The batter has little scope for initiative. After all, he must hit what the pitcher offers him, and what the pitcher offers is a thing beyond his control. To be sure there is a certain latitude in the batting system, in position at the plate, type of bat used, and manner in which the bat is held. There are also the chop swing and the full swing of the slugger. Batters with a scientific bent study place hitting and diversify their attack with the bunt. But when all is said and done the scope which batting offers for individual initiative is strictly limited.

On the other hand, provided the manager leaves him alone, the base-runner is forever confronted with a prospect of limitless possibilities. To steal or not to steal is a thing which he himself can determine unaided and alone. The actions of a star base-stealer on first are a miniature drama in themselves. Ty Cobb in his prime probably caused more damage to opposing clubs' defense by his base-stealing than he did even by his phenomenal hitting. There never was a more demoralizing influence to opposing pitchers' and infielders' nerves than Ty Cobb on first. Whether he would attempt to steal second was always a problem but the very uncertainty of that problem was a disquieting factor which was ever present. And once on second, he was as apt to steal third if the slightest occasion offered. From third it was only a short dash home, and well did pitcher and infielder know that the slightest slip on their part would enable Ty to cross the rubber. Cobb in his prime was perhaps the best illustration of the potent influence of a star base-stealer. Such influence can never adequately be expressed in mere figures. Even the sum total of Ty's base thefts utterly fails to tell the story. Ty's base stealing was the greatest individual factor in baseball offense ever seen, with the exception of Babe Ruth's terrific slugging.

As baseball develops it tends to get hide bound. The managers grope ever for the best possible system. Once they have found it, they relinquish all others, for is not the best the best? The way to win ball games is to eliminate chance so far as possible and to follow the prescribed course which experience and long experiment has proved the safest. The stolen base is an intruder in this scheme of things. The stolen base properly employed calls for individual skill and player initiative of high order. But these things are diametrically opposed to managerial wisdom, and in this we can read one great reason, perhaps the greatest, for the decline of the stolen base.

Mr. Lane appreciates the managers' efforts to reduce baseball to an exact science, but contends that they "have overlooked one very important point." For—

> The best possible system is not as might be supposed an inflexible cut-and-dried stereotyped affair. The machine-made system even of the very highest quality is not the ultimate attainment of human skill. Beyond and above all mere rules and regulations must be placed human daring and ingenuity. The best possible play ceases to become the best when every one knows it will be employed. The element of uncertainty, the unexpected attack is for that very reason frequently the most effective. It is difficult to guard against an assault that has not been foreseen.
>
> The stolen base is the most perfect example in baseball of the unexpected. In attack it is the farthest removed from the mere established rule. It injects an element of uncertainty into the game very welcome in these days of crystallized baseball methods. It allows scope for human initiative which is also very welcome. In short, it enables a player to be a thinking human being not a mere cog in a machine, and for that reason, if for no other, it deserves the unwavering support of all who wish to see baseball maintained as a well-rounded sport, strong in every department.
>
> Is it not time that this most interesting, most thrilling of baseball plays should be rescued from the slow moving but iron-bound tendencies of the modern game which are crushing out its very existence? Isn't it time that the stolen-base totals paused in their precipitate descent toward zero and began an upward climb? Or is it a matter of popular indifference that the stolen base, the most picturesque, the most fascinating play in baseball should be sacrificed on the altar of mechanical perfection?

MOTORING AND AVIATION

THE WORLD'S FASTEST AIRPLANE TURNING AT MORE THAN TWO HUNDRED MILES AN HOUR

The machine is thrown on its side until the wings are perpendicular to the ground, as shown in these photographs, and the centrifugal force is such that, on several occasions, the pilot has been rendered temporarily unconscious. So terrific is the speed that the machine has been flown for nearly a mile on its side without losing altitude, despite the fact that it received no support from the wings.

FOUR MILES A MINUTE THROUGH THE AIR

THE FASTEST THING ON WINGS, by breaking all the world's speed records in the Pulitzer Trophy Race at Detroit, is hailed by aeronautical experts as placing America decidedly in the van in the recent world-wide development of aviation. The endurance record established when two Army lieutenants remained aloft for over 37 hours and the altitude record, set at 40,800 feet by MacReady, one of the two lieutenants who established the duration record, had already come to this country.

When Lieutenant R. L. Maughan, of the Army Air Service, shot over a triangular course of 31 miles five successive times, at an average speed of 206 miles per hour, he traveled considerably faster than cannon-balls went at the time of the Civil War. In making the abrupt turns of the course, so terrific was the centrifugal force, that he lost consciousness momentarily on several occasions—one time for the space of several seconds. The course was triangular, and in turning the markers, the speeding plane banked half-way over in order to come around with the least possible loss of speed and time. On one such turn, it flew for nearly a mile with both wings up and down, that is, it was receiving no wing support whatever, and only its bullet-like velocity, apparently, kept it from falling. On the straightaway course, it is estimated, the plane at times made more than 240 miles an hour, and this speed is sufficient, the critics point out, to give a very small supporting surface great effect. Frank H. Russell, Vice-President of the Curtiss Aeroplane and Motor Corporation, which built the winning ship, writing in *The U. S. Air Service* (Washington), thus discusses Lieutenant Maughan's feat in flying, on a later occasion without assistance from his wings:

Following an argument which he had with the writer at lunch, Lieutenant Maughan, after making one or two short trials, flew a kilometer with his wings in a vertical position, riding on the side of the body, controlling his horizontal position during the flight with his vertical rudder, which then became his horizontal rudder. He lost no appreciable altitude during the test. One is forced to wonder whether the ultimate high-speed ship, provided the human factor can be protected, will require wings at all for other than ascending and alighting.

Brigadier-General Mitchell, Assistant Chief of the Army Air Service, later flew the one kilometer course at an official speed of 224.38 miles an hour, a world's speed record. In the preliminary tests, the speed record set by General Mitchell is said to have been exceeded unofficially by Lieutenant Maughan, who is credited with 248.5 miles an hour. But, since there was no official timing, General Mitchell's speed of 224.38 miles an hour stands. The previous official record, held by the French after tests a year ago, was 205 miles. General Mitchell predicts 250 miles very soon and 300 within five years, on the basis of what has already been accomplished. He is quoted as follows, in a special dispatch to the New York *Herald:*

The flying was done at about 165 feet from the ground, this being desirable, so that accurate timing could be accomplished. The speed was attained at an altitude and then the plane was leveled off close to the ground in order to go over the course.

HE MOVES FASTER THAN A CANNON-BALL

The cannon-ball used in the Civil War averaged about 200 feet a second. Lieutenant L. R. Maughan, when he broke all the world's speed records at the recent Detroit air races, traveled at the rate of about 300 feet a second, nearly twice as fast. At this speed the wings of the plane are more of a hindrance than a help, but they are very useful when it slows down in preparation for landing.

The wind stream is terrific when flying at this speed. The first time I tried the wind was so strong that it blew off the top of my helmet. Then I hit on the idea of fastening on the helmet with adhesive tape, wrapping it around and around my head until it stayed. I found this a benefit rather than an inconvenience. It served as a support.

Speed is everything when it comes to pursuit ships in the Army. If you can not catch the other fellow and make him fight you might as well walk. The Army that has the fastest

PATTON'S
Velumina
The Oil-Flat Wall Paint
PORE-PROOF

You can wash those soft artistic walls

SOAP and water take the place of redecorating when your walls are painted with Patton's Velumina. This famous oil flat wall paint is pore-proof and durable beyond words. Dirt, dust and grime cannot penetrate its hardy film. They can only adhere to the surface and are easily washed away.

Architects and decorators recommend Patton's Velumina highly. For it gives walls the rich, soft-toned simplicity that is coming so much into vogue. It also enhances lighting effects by proper diffusion of light. Those who live in the atmosphere it creates find its quiet beauty a continuous source of satisfaction.

This artistic, economical, long-service wall paint comes in white and sixteen attractive tones. It is one of the numerous products manufactured by the Pittsburgh Plate Glass Company.

No matter what you need in the way of glass, paint or varnish products, the Pittsburgh Plate Glass Company manufactures something that will meet your requirements exactly. Handled by quality dealers everywhere.

A good brush is as necessary as good paint.

MOTORING AND AVIATION
Continued

planes will in the next war have the superiority in the air. We are determined to hold the speed records if it is at all possible.

The story of the Pulitzer Trophy Race, as told by an expert observer, Ladislas d'Orcy, in *Aviation*, New York, differs in several particulars from the newspaper accounts of the event which were telegraphed over the country immediately after the race. The race included sixteen contestants, records the writer, and

> The racers were started off in heats of not more than five each in order to afford the contestants the maximum possible safety. The first heat to be flagged off consisted of the Thomas-Morse *MB7* (Captain Mulcahy), one Bee-Line racer (Lieutenant Callaway) and two of the Verville-Sperry racers (Lieutenant Barksdale and Lieutenant Johnson). The story of this race was brief, for the Bee-Line racer was eliminated in the second lap by radiator trouble, and the Thomas-Morse *MB7* followed suit on account of lubrication trouble. This only left the two Verville-Sperry ships to compete, and both finished the 250-kilometer circuit, Lieutenant Barksdale making an average speed of 181 m. p. h., and Lieutenant Johnson, 179 m. p. h.

Our readers are familiar with the technical features of these airplanes, and in particular with the ingenious retractable landing gear which the pilot draws into the fuselage by means of a crank. However, the cold mention of this fact does little justice to the emotion the onlookers felt when the two pilots actually *did* draw their landing gears into the fuselage. While the Dayton-Wright racer which was entered in the 1920 Gordon Bennett race also incorporated this feature, this "gadget" had never been publicly demonstrated in the United States before this race, hence the emotion of the crowd will readily be understood. The Bee-Line racer also embodies this feature, so that for the first two laps Selfridge Field was treated to a strange race between airplanes shorn of their landing gears. If one adds that a few days before the start of the Detroit Aviation Meeting Bert Acosta had by accident landed one of the Booth racers on its fuselage, having forgotten to unwind the undercarriage release gear, the mixed feelings of those who watched the landing-gearless race will better be appreciated.

The second heat of Pulitzer racers, which was sent off at 1 P. M., comprised four Curtiss ships all fitted with Curtiss engines, namely the two Army-Curtiss racers and the two Navy-Curtiss racers, plus the Navy "Mystery" ship. The latter had been completed but shortly before the race and its hurried assembling and testing rather handicapped its chances in the race. The Curtiss racers, and in particular the two Army ships, were naturally the prime favorites, for it was known that one of these ships had attained in unofficial tests at Garden City, N. Y., a maximum speed of 222 m. p. h. The question most discust was whether these extraordinarily fast ships would prove maneuverable enough on the turns to hold the speed they would make in the straightaways.

The race of these ships fully vindicated the expectations of the Curtiss engineers

and of the Army pilots who were flying them. Despite the terrific speed of their ships Lieutenant Maughan and Lieutenant Maitland swung them around in perfect banks at the pylons. As a matter of fact, in the opinion of many onlookers qualified to express a judgment on these matters, the two Army-Curtiss racers rounded the pylons with no more visible difficulty than the standard pursuit ships of the Air Service had done a few hours previously. The wonderful piloting by both Lieutenant Maughan and Lieutenant Maitland contributed in no mean way to this result, and words are inadequate for describing the masterly manner in which the two officers handled these ships which were rushing through the air at a rate of almost three and a half miles a minute.

Lieutenant Maughan broke all world's records for speed established in closed circuit for 100 and 200 kilometers.

To what extent this year's Pulitzer Trophy race lowered existing world's records may be seen from the following: Lieutenant Maughan exceeded the last world's speed record for 100 kilometers which was made by Sadi Lecointe at Paris, France, September 26, 1922. Lecointe's record has not yet been officially homologated. Lieutenant Maughan made the 100 kilometers (two laps of the Pulitzer course) at an average speed of 206.3 m. p. h.

Seven flyers, two of them Navy entrants and the other five Army men, broke the world's record for 200 kilometers when they exceeded the 174.8 m. p. h. mark established October 1, 1921, by Brack-papa in a 700 h. p. Fiat in France.

The new world's record for 200 kilometers (four consecutive laps of the Pulitzer course) was made by Lieutenant Maughan with an average speed of 205.9 m. p. h. The other five flyers who broke the old record are: Lieutenant Maitland, Army, 198.9 m. p. h.; Lieutenant Brow, Navy, 193.7 m. p. h.; Ensign Williams, Navy, 188.4 m. p. h.; Lieutenant Barksdale, Army, 180.9 m. p. h.; Lieutenant Moseley, Army, 179.2 m. p. h.; and Lieutenant Johnson, 178.8 m. p. h.

At the conclusion of the second flight Major-General Mason M. Patrick, chief of Air Service; Rear-Admiral W. A. Moffett, chief of the Naval Bureau of Aeronautics; and Edwin Denby, Secretary of the Navy, rushed on the field to congratulate Lieutenant Maughan.

Major-General Patrick was so pleased that he patted Maughan on the head instead of shaking him by the hand, while Secretary Denby frankly wept, overcome by the brilliant performance of the Army aviator.

Lieutenant Maughan was exhausted by his race and leaned against his plane for a few minutes until he had revived.

"I got lost four times in the haze," Lieutenant Maughan said. "I was stunned more or less at each of the fifteen turns. My worst moments, however, were at the turn at Gaukler's Point. I lost confidence, which a good aviator ought not do, and then became unconscious. On the straightaway I came to. Another trouble I had was with my feet going to sleep."

The speed at which these two pilots flew was so obviously superior to that of the other racers that after they had landed—Lieutenant Maughan by sideslipping to kill his speed—it was practically a foregone conclusion that the Army-Curtiss racers would win this year's Pulitzer race—as it happened. However, a word should be said about the two Navy-Curtiss racers flown by Lieutenant

You hear of *the 8 hour Day* What of the *8 hour Night?*

SLEEP is "Nature's sweet restorer." If you don't get enough of the *right kind* of sleep you can't be mentally alert. Nor can you be at your best, physically.

An eight-hour sleeping night is quite as important as an eight-hour working day. If you don't get your proper sleep, you become irritable; your work becomes a task.

If you are in the habit of drinking coffee, that may be the explanation of your disturbed and restless sleep with consequent nervous irritability. For coffee contains caffeine — a nerve-irritant.

Why not give yourself the benefit of the doubt? It's so easy to find out for yourself—stop coffee and drink healthful, fragrant Postum instead.

Postum is a pure and wholesome cereal beverage, absolutely free from caffeine or drugs of any kind. Thousands of people prefer it to coffee, for its rich flavor alone.

Postum FOR HEALTH

"There's a Reason"

POSTUM
comes in two forms:
INSTANT POSTUM
(in tins)
prepared instantly in the cup by the addition of boiling water.
POSTUM CEREAL
(in packages)
for those who prefer to make the drink while the meal is being prepared, made by boiling fully twenty minutes.

Made by Postum Cereal Co., Inc., Battle Creek, Mich.

A. J. Williams, U. S. N., and by Lieutenant H. J. Brow, U. S. N. These ships were originally built for last year's Pulitzer race, which one of them, won with Bert Acosta at the stick.

The modifications introduced consisted mainly in the fitting of wing radiators, following the design of the Army-Curtiss racers. Despite the advance made in the last twelve months in airplane design the two Navy-Curtiss racers made a very creditable showing. Lieutenant Callaway's ship actually covering the third lap at 196 m. p. h. Had it not been for the stupendous performance of the Army-Curtiss ships, the time made by the Navy-Curtiss ships would have undoubtedly received more attention than it did.

Lieutenant Williams incidentally had a thrilling experience when a fire extinguisher in his plane broke, a piece of it knocking his helmet off. He had great difficulty arranging his helmet while plunging on at better than three miles a minute. Fumes from the broken extinguisher sickened him, but he succeeded in finishing in fourth place.

When the last ship had landed, and the timer's stand announced the victory of Lieutenant Maughan, a great volume of cheers broke out from among the pilots, mechanics and others present. Many bets were won and many were lost, but all true patriots felt elated at this victory which placed America in the front rank of aircraft-producing countries.

A VIEW SHOWING THE RADIATOR IN THE WINGS

By covering the wings with a thin sheet of copper under which water from the engine circulates, the designers have been able to add ten miles an hour to the speed of the plane. This is a Navy racer, and its heavier construction reduces the speed considerably below that of the Army racer, the record holder, shown on page 67

The race also might seem to have settled the "controversial point as to the uses of thin and thick wings," observes *Aviation*, editorially. For—

> The four Curtiss biplanes which finished the race in leading places were all equipped with thin wings. Hence the race seemed to many as a victory of the thin-wing biplane over the thick-wing monoplane, for high-speed ships at any rate.
>
> This reasoning, while containing much truth, does not contain all the truth, however. There can be no doubt that at the present stage of aeronautical engineering the thin-wing biplane is, despite its greater apparent parasite resistance, more suitable for high-speed work than the thick cantilever monoplane, just as the latter gives better results in large weight-carrying ships than the thin-wing biplane. Nevertheless, if a fair comparison is to be made between the two types, it should be remembered that the thin-wing biplane benefits from some twenty years of continuous development, whereas the thick-wing monoplane, as a type, is but four years old. It would therefore be rash to state dogmatically that the thick wing will never be else than a weight-carrying wing.
>
> It should also be noted that the thick-wing monoplanes which participated in this year's Pulitzer race were the first genuine American examples of this construction, and that their constructors had very little precedent and no experience to go by in designing them. That despite this handicap the thick-wing monoplanes should have put up performances which were on the whole highly creditable is merely another illustration of the adaptability of the American aeronautical engineer to changed conditions and a brief of his ability to match anybody's product—if given a fair chance.
>
> As to the victorious Curtiss racers, all that need be said is that they represent almost the last word in refinement possible in biplanes. It may still be feasible that, by eliminating a few wires or by designing a more perfect streamline body, a few miles may be added to the speed of racing biplanes of equal power. But it seems to us as if we were pretty near the practical limit.

The Chicago *Tribune*, also, believes that we are near the practical limit of speed, and has no regrets for that fact. The editor believes the really important development of the airplane must take place along different lines. "Why fly four miles a minute?" he asks, and comments:

> Marvels of speed, probably the fastest rate at which man has ever moved and lived to tell the tale, have marked the aviation meet at Mount Clemens, Michigan. Lieutenant R. L. Maughan, U. S. Army pilot, set a world's record of more than four miles a minute. Think of traveling from the loop to Wilson Avenue in about a minute and a half and you will get some idea of his pace.
>
> That is interesting. It is very important from the Army standpoint. Development of such speed may win wars in the future. We may congratulate ourselves on this evidence of development in our military air service, and may well afford to make appropriations to continue the work.
>
> But for commercial purposes the marvels of speed have hardly more relation to practical peace requirements than the development of the race-horse Man o' War has to trucking requirements or farm labor, or the construction of a racing automobile has to coal deliveries. From the standpoint of commercial development the gliding experiments now going on in England, or which recently were made in Germany, are more important.
>
> Commercial aviation requires two things primarily. One is improved stability or safety of airplanes. The other is reduced cost of operation. Stability has already reached a point where a modern machine with two or three passengers and a capable pilot may operate with almost as much safety as a motor car on a crowded highway. But as the size of the machine is increased to carry more persons the danger of accident is correspondingly increased. And the small and safe machine can not operate except at high cost per passenger or unit of freight carried.
>
> It is these problems more than an increase of ten or 100 miles an hour in speed which commercial aviation must solve. The gliders are attempting solution. They are learning to keep aloft without motors by taking advantage of air currents, as a bird soars. One expert says if they could see the air they could even now remain aloft as long as they desired. They can't see it, but they are learning to feel it and "sense" it. Instruments will be developed to help them. Eventually we may have machines with light engines, using the air currents chiefly for buoyancy and the power for movement.
>
> We need all these features of development. But for commercial development, out of which finer improvements must come, unless aviation is always to remain a subsidized science, we most need safety and low costs. Safety, with caution, is virtually here. The low costs must follow. Public interest and patronage will bring them. And such sensational achievements as those at Selfridge Field will stimulate interest. That, in the final analysis, is their chief value outside the military.

The new world's speed record recalls to the writer of a bulletin on "Facts About Flying," published by the Aeronautical Chamber of Commerce of America, that, on September 21, 1908, Wilbur Wright, in France, established a world's speed record of 27.2 miles an hour. Some other records are mentioned:

> On December 17, 1903, Orville Wright, in a biplane designed and constructed by his brother Wilbur and himself, equipped with a 16 horse-power motor, also of their design and construction, made the first successful flight in a motor-driven flying craft—12 seconds, at 30 to 35 miles an hour.
>
> Orville Wright, an American, was the first man in the world to fly in a heavier-than-air machine. In the calendar year 1921, in the United States alone, nearly a quarter of a million people were carried by air.
>
> On November 13, 1908, Wilbur Wright established what was then a world's altitude record of 82 feet.
>
> Lieutenant J. MacReady, U. S. Air Service, in an American designed and constructed biplane, equipped with a 400 horse-power Liberty motor, ascended 40,800 feet over Dayton, Ohio.
>
> Santos Dumont, in a flight in France, on November 12, 1906, astounded the world by making what was then the unparalleled duration record of 21 seconds. The present record, made by Army airmen, is over 35 hours.
>
> A fourth world's record in aviation went to American craft and an American pilot, when David McCulloch, with three passengers, climbed to 19,500 feet in a Loening monoplane air yacht, Liberty motored, at Port Washington, Long Island, on August 16, 1921.

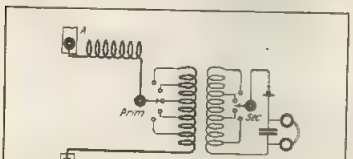
A POCKETBOOK RADIO SET

THE ATTENTION OF CHRONIC INVALIDS and bedridden convalescents is called to a way in which they might beguile some tedious hours by imitating Mr Raymond M. Moore, who made a compact radio receiving set out of an old pocketbook, while confined to bed recovering from a long illness. In *Radio News* (New York), Mr. Moore gives a cheery account of the way he did it.

"Why not install a wireless in your billfold?" Especially when you're broke! After reading in *Radio News* about a prize for the smallest portable radio outfit, I decided my billfold would suit more use carrying a wireless than money. This is the method I used.

Take a billfold or card-case of the ordinary kind that folds over twice.

"The coil to the extreme right is the secondary and is constructed on the pancake style in the following manner: Take a



HOOKUP OF THE WALLET WIRELESS

piece of cardboard or wood ½" x 1¾" x ¼" and paste a piece of cardboard 2" x 4" on either side so the first piece forms a core for the coil. Then wrap 450 turns of 31 S.S.C. wire on this, taking a tap every 90 turns. This makes a coil about 2 x 3¾". Break frame away from it and fasten on the billfold with an ordinary needle and thread, running the taps under the primary to switch.

"The primary is placed on the center of the fold and is constructed and fastened on much the same principle as the secondary. It consists of 820 turns of No. 28 S.S.C. wire, a tap on the first 80 turns and every 40 thereafter, making seven in all.

"The extreme left of the fold is given over to the panel or control. This is a piece of fiber or some stiff insulating material 1⅜" x 4¼" x ⅛" and is slipt under the transparent cover where identification card belongs. On this are mounted the primary and secondary switches, the crystal detector and binding posts. The condenser is also mounted here.

"The primary switch is of the usual rotary type and has a 1" radius. The small fiber handle is grooved and slipt on a lever, as there is hardly enough room for a screw in it. Since such small switch points are hard to get, it is of interest to know I took these out of old electric-light sockets. They are just right. The bearing for the primary switch leads the antenna binding post. Both switches increase counter clockwise.

"The secondary switch is much the same as the primary, but is a little longer to allow for the condenser which is mounted under it. It has a radius of 1½" and uses the upper fone binding post as a bearing.

The condenser which is mounted between the two middle binding posts or the fone binding posts is 1¼" x 1¼" square and has flaps on each side to connect to posts. It is of the usual stoppage variety.

"The detector cup or cup is also directly connected to the lower fone binding post and is set down in the panel. It should be made of good spring brass to hold the crystal well. The cat whisker wire is fastened on the lower right post.

"The post directly below the detector cup is the ground. About 10 feet of wire are fastened to this for use as ground connection with a clip on the end which can be hooked to anything handy in the ground line or to a tinned spike driven into a tree trunk. This is wound over the antenna holders when not in use.

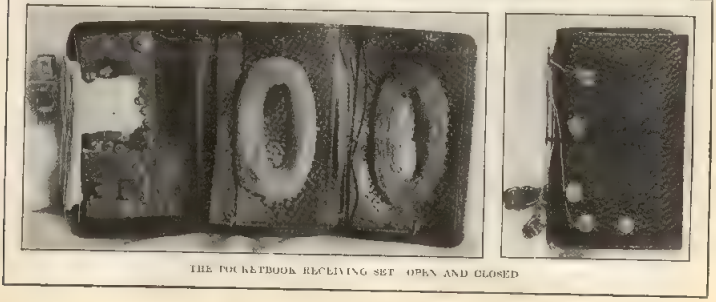
"The coil on the left of the panel is the antenna, or if not needed for that, the fixt loader. It is made of about 100 feet of No. 28 wire and is wound on two pieces of wire bent in U-shape and a long tail which is inserted between the end of the panel and the end of the fold. As much wire can be put on as is convenient and needed to give satisfaction. One end of this is fastened to the antenna binding post and the other to a clip similar to a ground clip.

"This makes an outfit which is complete, except for the fones, in 19¼ cubic inches or an overall measurement of 4¾" x 3¼" x 1¼" when folded to carry. In fact it is no bulkier than the ordinary well-filled billfold. The coupling is varied by opening and closing the right-hand flap.

"Care should be taken in placing the coils to see that when closed the primary is directly below the secondary. This is done to secure the best coupling."

HE HAS MUSIC IN HIS PURSE

Raymond M. Moore who made the pocketbook radio outfit while also in bed. What no can do when he is well is not stated



THE POCKETBOOK RECEIVING SET, OPEN AND CLOSED

RADIO · DEPARTMENT

ETHER WAVES VERSUS CRIME WAVES

TO THE AMATEUR ENTHUSIAST it has seemed that the authorities were singularly slow to take advantage of the very obvious potentialities of radio as a regular police equipment. Not that the opportunities have been entirely overlooked. There have been reports, notably from Chicago, of police automobiles equipped with radio outfits, but the photographs that accompanied the reports suggested a rather crude and makeshift effort; and it does not appear that anything like an adequate and comprehensive attempt to realize the full possibilities of the scientific application of the new art to the apprehension of the malefactor has elsewhere been made by the guardians of the law.

It appears, however, that the delay has not been due to lack of appreciation on the part of the authorities, but only to certain difficulties necessarily inherent in the introduction of a new method in a highly specialized organization. Now it would seem that these are by way of being overcome, and we learn that steps have been taken to make radio available as a regular part of the equipment of the metropolitan police force. The New York *Times* gives details of the important enterprise. We quote:

"A wireless broadcasting station of the latest type has been installed at Police Headquarters in this city, and within a few months the police boats, police inspection district headquarters and stations will be equipped with receiving sets, so that they may obtain early information on stolen automobiles and crimes and criminals. The Police Department has received the special permission of the Department of Commerce through Secretary Hoover to operate on a special wave length of 400 meters, a band not allocated to any one else, so that there will be no interference whatever with the police broadcasting station.

"A second set for the city is to be erected on the top of the Municipal Building by the Western Electric Company.

CHICAGO POLICE AUTO WITH RADIO OUTFIT

Talking with headquarters

Kadel & Herbert photo

BROADCASTING SET AT NEW YORK HEADQUARTERS.

"Joseph A. Faurot, the famous finger-print expert, and Deputy Commissioner in charge of the New York police executive departments, inspected the new station yesterday and made some successful tests with the apparatus.

"'If what Mr. Evans, the Western Electric engineer who is instructing our operators in the use of the equipment, states is true,' Mr. Faurot said, 'the Police Department will be able without any difficulty to cover an area of at least 30,000 square miles about this station. This should prove a great aid to us in running down stolen automobiles, locating missing persons, spreading alarms, and in all other work where secrecy is not an essential factor. Every amateur receiving station in a radius of at least 100 miles from the city will become a sort of police outpost, enabling us to spread emergency information at a much quicker rate than is now possible.

"M. R. Brennan, Superintendent of the Police Telegraph Division, who, with Commissioner Enright himself, was mainly influential in clearing the way for the installation of the station, explained some of the radio plans of the local department.

"'We have already arranged with Mr. Hoover, Secretary of Commerce, for a special wave length for exclusive police purposes,' he said. 'The fact that there can be no delay in the dissemination of police news makes it out of the question for us to take any chances on being interfered with by the commercial broadcasting stations

"'Mr. Hoover, who recalled how the New York department was the first to make a success of radio telegraphy for police work some years ago, has been quick to realize our position and has authorized us to send on a 400-meter wave length Later, if it becomes necessary for the Department of Commerce to allow wider scope to any of the present users of the 360-meter wave length, it has been agreed that we will widen our range to 500 meters.

"'We have already made arrangements,' Mr. Brennan said, 'to equip our police boats and inspection district offices with radio telephonic receiving sets. As we progress with the idea, receiving stations will be installed in all precinct headquarters and special operators will be detailed to attend them twenty-four hours a day. When the other large cities take to radio telephony for administrative purposes, we expect to be able to establish a network of broadcasting and receiving stations that will make it possible to give a national alarm almost instantaneously.'"

débris, sawdust, has long been regarded as one of the most hopeless. Immense heaps mark the location of old saw-mills, and it soon collects in such quantities around woodworking establishments that it has to be hauled away by the truckload Now it can be turned into feed. Says the writer:

"Most of us have heard the story of the economical farmer who fitted his mule with green spectacles and then fed him excelsior and sawdust in lieu of grass and ensilage. Had not the mule expired the experiment would have been a great success. To-day, however, this experiment is being repeated in a modified form and with excellent results. Moreover, we do not have to go to the expense of providing the livestock with colored glasses to persuade them that the proffered food is palatable. They eat it with relish and with profit.

"White-pine sawdust, for instance, when treated with dilute sulfuric acid and cooked under pressure with steam, undergoes a chemical change and is partially converted into glucose, a simple sugar which is both digestible and nutritious. The resultant mixture, which contains from 14 to 18 per cent of glucose, is then neutralized with lime, the sugar dissolved, and the solution filtered off and boiled down under reduced pressure to the consistency of molasses. This molasses is then added to the partially dried sawdust residue, and a product closely resembling bran is obtained.

"The processing of sawdust may be carried a step further and the sugar formed allowed to ferment so that alcohol is produced—not wood alcohol, either, but the type which once was used to rout dull care. It is estimated that 300,000,000 gallons of alcohol could be produced from the sawdust, shavings and scraps of lumber which are annually wasted at the mill. Eventually we must have another motor fuel to enhance or replace our fast dwindling supply of gasoline, and alcohol seems to offer the greatest promise.

"These are only a few of the many things we are doing toward increasing industrial efficiency. It is evident that American industry is more or less alive to the necessity of cutting down its flagrant waste. Probably no other nation has been eating up its principal at a livelier rate than we, altho this principal, if carefully handled, should not only supply our needs and desires, but those of indefinite generations. We have discovered, developed and are using our wealth, and now we are rapidly learning to save it."

BIRD'S SPECTACLES—The remarkable observation has been made that the eyes of birds contain drops of colored oil. For example, domestic fowls look out upon an orange colored world because of the globules of orange-colored oil in the eye, which acts like an orange-colored lens. A careful study of this phenomenon by an investigator named Hennmg, has revealed the fact, according to *Reclam's Universum*, Leipzig, that the object of this provision is to increase the range of vision, especially in foggy weather. As a matter of fact our own vision can be similarly improved, too, in a fog, by the wearing of orange-colored glasses. If, for example, the unaided eye has a range of 300 yards in such weather, the donning of such spectacles increases the visible distance to 2,000 yards. This provision is likewise very useful to birds of prey, enabling them to detect the smallest animals on the surface of the earth from great heights It is said, too, that the reddish yellow oil globules in the eyes of migrating birds make it possible for them to perceive the coast of Africa from the shores of Italy, even in a dim light.

A NEW STANDARD IN LOCOMOTIVES

THE OLD RULE OF SIMPLICITY has been discarded in a new type of engine built for the New York Central lines. By assembling a variety of devices, none of which is claimed to be particularly new or radical, the designer has been able to produce a locomotive that operates with the minimum fuel, weight and cost of repairs, and to secure ease and safety. The statements are made in an article contributed to *Mechanical Engineering* (New York) whose author justifies our headline by his assertion that the new engine "sets a new standard" in railway traction. The continued improvement in steam locomotives may be regarded in some measure as a challenge to electric traction, which altho occupying its own field in increasing degree, will not, at any rate for a long time in the future, succeed in ousting steam completely. He writes

"Regardless of the gesture threatening electrification of railroads sometime in the future, the development of steam locomotives goes merrily on. The most recent example of remarkable progress is a new Mikado placed in heavy fast-freight service on the Michigan Central. This machine embodies the results of a score of years of study and research and altho no official tests have been taken, the performance has been so satisfactory that the order has been placed for one hundred and fifty according to the same detail specifications. In its initial road test, it hauled 100 heavily laden coal cars and later pulled a train of 140 cars containing more than 9,000 tons of coal, this over the level division between Toledo and Detroit.

"'No. 8000,' as this extraordinary engine is designated, was built by the Lima Locomotive Works according to designs made under the supervision of President A. H. Smith of the New York Central Lines. The best known practises and devices have been incorporated.

"The first requirement of maximum tractive effort for the minimum weight is an elimination of unnecessary weight and this has been accomplished, without sacrifice of strength, by refinements in design and by the use of alloy steels and hollow axles and crank-pins. Without tender, the locomotive weighs 334,000 pounds. The tender with its capacity of 10,000 gallons of water and 16 tons of coal, weighs 199,700 pounds. Maximum tractive effort of 74,500 pounds is obtainable, a booster on the trailer truck delivering 11,000 pounds. In a statement issued by the New York Central Lines, attention is especially directed to the fact that, compared with the heaviest Mikados in the Michigan Central service, No. 8000, with an increase in weight of only 2 per cent., has an increased tractive power of nearly 8 per cent. from the forward cylinders alone and with the booster the increase is 26 per cent.

SIMPLICITY DISCARDED IN FAVOR OF ECONOMY

By festooning the locomotive with various devices the designer makes it operate with less fuel, weight and repairs and more ease and safety.

Let Insurance Protect

Every check you write

Thousands of banks all over the country now give this positive protection to depositors' funds without any charge.

Ask your banker for Super-Safety Insured Bank Checks and get positive protection against loss through check alteration, whether you write your checks by pen and ink, typewriter or machine.

Your banker can give you a certificate of insurance certifying this protection if you ask. This costs you nothing

If you cannot find a banker who can furnish you Super-Safety Insured Checks write us for the name of one near by who can.

$1,000.00 of check insurance against fraudulent alterations, issued without charge, covers each user against loss

THE FUTURE OF AMERICAN MANUFACTURING

WHILE we are undoubtedly on the upswing of the existing business cycle, these little booms and depressions we experience every few years are, as a writer in *The Annalist* notes, only "ripples on the surface of a rising curve of physical production" which has been carrying us steadily upward for about fifty years. The question, we are told, is whether this "long-run curve" can continue to rise for another fifty years. "Upon the future slope of this curve hang tremendous consequences; the profits of American business, the size of the American population in 1950 and in 2000 A.D., the maintenance of the American standard of living, the position of the United States as a world power fifty or a hundred years hence and, in short, the whole destiny of the America of our children and our children's children." The writer, Mr. Homer Hoyt, a professor of Economics in the University of North Carolina, points out that we have developed a manufacturing capacity in excess of our own needs, so that considerable amount of foreign trade is necessary for our prosperity. We must now choose between two alternatives. We may keep the prices of manufactured goods from falling any lower, and restore the balance of prices "by raising the prices of farm products up to the level of other goods and services." "Such a consolidation of American prices on a plateau 60 per cent. above the pre-war level would tend to maintain an internal equilibrium, but it would," we are told, "cut us off from foreign markets." We could prosper to a certain extent with the help of tariff laws, for "we have resources enough to be self-sustaining, provided we limit our population and maintain a proper balance between agriculture and manufacturing, by contracting the size of our manufacturing plant." But, we read

> If we follow this course, we must be prepared while maintaining internal peace and contentment to see other nations forging ahead in population and in manufacturing capacity, and becoming ever relatively more powerful as we stand still. We must be prepared to give up our insatiable thirst for industrial expansion. It will be a happier, better balanced national life with greater stress upon art and culture perhaps, but it will not make us more vigorous and powerful as a nation

Now comes the other alternative. We can maintain the expansion and manufacture that has been going on for half a century, but to do so our manufacturers must lower their prices to pre-war levels or below, and this means a program of standardization and consolidation at home and active competition abroad. As Professor Hoyt outlines the process:

> Standardization, increasing use of machinery and industrial concentration are interchangeable terms. Each one is both the cause and the effect of the other. The more standardized the article, the more machinery can be used in its production, and the cheaper the cost. The greater the degree of standardization, the greater the concentration of industry. Two concerns making one standardized article will undercut each other's prices until one gains all the business. The great number of styles and brands which is favorable to hand and not machine production is caused by the attempt of small concerns to avoid price competition, by producing goods that will sell on the basis of a difference in quality instead of a difference in price.
>
> Standardization of American goods will thus either be the cause or the effect of a series of gigantic mergers and consolidations, which will not end until all of American industry is in fact one technical manufacturing unit. As nations are becoming complete self-sustaining industrial and manufacturing units, since Germany pointed the way, American industry as a unit will tend to compete with Great Britain, Japan and Germany as units for the markets of the world. By consolidating all of our industries until all become part of one complete industrial machine, we shall produce at far less expense than we do at present with hundreds of thousands of separate units that fit loosely and wastefully together. The so-called point of diminishing returns in manufacturing recedes further and further with every increase in standardization and concentration. For a single industry producing a standardized article, cost decreases with every increase in output until a world monopoly is attained. But this is not all. The cost of producing the one standardized article with a world monopoly is lowered still further if other standardized articles are produced in the same country, for, in the technical machine industries, concentration and efficiency in one line aid concentration and efficiency in other lines.

Professor Hoyt shows how this process might logically develop until "every industry is a monopoly and these monopolies are located in one country under one gigantic world control." He reminds us that factory capacity is, to a large extent, potential military power, "and the Disarmament Conference had nothing to say as to that." Therefore, he concludes,

> Business profits, the prosperity of American wage-earners and the very existence of the United States as a great Power demand a complete reorganization of our manufacturing industries, to the end that out of the present chaotic medley of firms duplicating each others' efforts and using antiquated hand methods of production, there shall arise gigantic industrial consolidations producing standardized goods linked together in one efficient American manufacturing machine that will undersell the world. We do not seek this power in any selfish or imperialistic sense, but until competitive manufacturing expansion is limited by a conference of nations, self-preservation demands that America do her best.

books of early days when the world was younger are far more informal than this one on "Eudocia."

For all that, there is excellent character drawing and a certain splendor to the story. Pictures that glow with rich colors and a pomp that stirs the imagination are a part of the book. And there are threads of plot and counterplot that weave into a puzzling pattern. It is not very long, and it is not likely that having begun it one will be satisfied to leave it unfinished. There is a fascination in seeing the clever men and women, in watching their machinations to hinder traps, what is hard to read. It is a joy to watch the strong and wicked as they set themselves, to have their own plots work against them. And the book is full of this sort of interest.

But it is hardly the kind of book we have the right to expect from Phillpotts, and that is the reason it is not being treated with greater praise by the present reviewer. There is a kind of hollow reverberation to it, a great to-do about a slight matter. "What's all the shootin' for?" you feel like remarking.

A good enough novel for some casual writer is not good enough for Phillpotts. Or, if good enough for him in some casual mood, then it ought not to be put forth with a certain assumption of importance, and yet this assumption is decidedly present in "Eudocia." A story of intrigue in a picturesque setting it is; but it is not a mirror into which we may look and find the reflection of mankind in all times, as it assumes to be.

A GOOD WOMAN'S CHILDREN

IN spite of the wide-spread theory that women do not appreciate irony it is only they who will fully understand and enjoy Miss E. M. Delafield's latest book "Humbug" (Macmillan, $2.00). It shows a state of things uncommon, if not long since abolished in this country and, according to modern writers, slowly disappearing in England—the intrinsic falseness of much that has been heretofore considered necessary in the bringing up of children. Yet if our own education has been on entirely different lines from that of Lily Stellenthorpe, still we of the older generation recognize many of the platitudes that were current in our young days, tho we may have been sufficiently fortunate to have escaped them.

The story deals with the life of Lily Stellenthorpe and the insidious sapping of her mental force and integrity by means of the atmosphere of pious insincerity that surrounds her from her youth. At its opening Lily and Yvonne are the only children of Mr. and Mrs. Stellenthorpe who are thus trenchantly described. "The mother . . . was a good woman, and had all a good woman's capacity for the falsification of moral values. Her husband was so constituted that it would not be unjust to describe him in identical terms." Yvonne, aged about ten, had nearly died in infancy of water on the brain and in consequence was very slightly deficient mentally. This her parents would never acknowledge, and consequently the poor child, subjected to the same tests and discipline as Lily, was unjustly treated, both in demands and punishments, an injustice which Lily, who loved her sister with a protective love, was the first to perceive and resent. When Yvonne finally dies the natural feeling of relief is of course suppressed, for Philip Stellenthorpe "was unable to refrain from exacting the due meed of conventionality that he took for a tribute to Yvonne's memory."

And this insincerity pervades the Stellen-

April 3.—Premier Lloyd George receives a vote of confidence on his Genoa Conference policy, by a vote of 372 to 94.

The Chamber of Deputies gives Premier Poincaré a vote of confidence by a vote of 484 to 78.

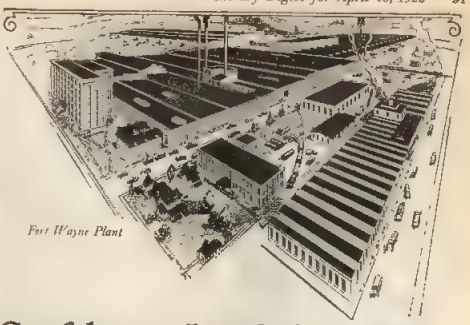
Dispatches from Vladivostok report a clash between Japanese troops and forces of the Chita Government, following a demand by the Japanese that the latter disarm. Eight of the Chita soldiers are reported killed.

A proclamation signed by 19 Royalists, headed by Count Albert Apponyi, declares that Otto, son of the late King Charles, is King of Hungary.

DOMESTIC

March 29.—The naval armament limitation treaty and the treaty restricting the use of submarines and poison gas in warfare are ratified by the Senate.

The House passes the army appropriation bill carrying about $280,000,000 to meet military and non-military



Fort Wayne Plant

Confidence—Justified!

Since 1885 public faith in Bowser Pumps has kept Bowser in the lead of their industry.* You can depend absolutely on getting full, accurate measure and quick service of gasoline and oil from Bowser Pumps everywhere. Full measure means full mileage, so be sure to look for the Bowser trade-mark and know you are safe in your filling station.

Bowser equipped filling stations and their patrons profit through Bowser Prestige.

Write for full information on the new Bowser Piston-Type Visible Pump.

* Bowser today is the oldest and largest manufacturer of self-measuring pumps.

BOWSER PRODUCTS

For Handling Gasoline and Oils Wherever Sold or Used

- Filling Station Pumps and Tanks for Gasoline.
- Portable Tanks for Gasoline and Oil.
- Storage and Measuring Outfits for Paints, Oils, Kerosene and Lubricating Oils.
- Power Pumps.
- Carload Oil Storage Tanks.
- Dry Cleaners' Underground Naptha Clarifying Systems.
- Richardson-Phenix Oil Circulating and Filtering Systems and Force Feed Lubricators.

Ask for Booklets

The customer sees, through the sight-glass, that the measure is full

safe rejoinders. They are introduced as follows:

If you keep in mind this final adjuration you'll save much for yourself when that day eventually rolls round in which you, as humans are wont to do, will slip and find yourself face to face at last with a rugged, weatherbeaten and uniformed guardian of the streets who, if you have been exceeding the speed limit, might ask, "Where's the fire?"

The best thing to do in this event shall be set forth in the words of a veteran traffic officer whose procedure and reasoning are characteristic and typical of the tribe of Cop. Listen to him:

"If you were exceeding the speed limit and know it, admit it. If you were traveling too rapidly and didn't realize it, say that perhaps you were, and express regret. Don't lie. If you're not an old offender and telling what appears to be a straightforward story, the chances are 10 to 1 that you'll be permitted to drive on with a warning. Officers want to arrest and convict only those careless and reckless drivers who persistently endanger other users of the streets and highways."

Women drivers are seldom arrested. This is not because they are women and perhaps fair to look upon. It is because Milady, when held up by the copper, shows plainly her distress when told that she has erred in driving; because by her blushes and her visible embarrassment she instantly convinces the officer that her delinquency was unintentional. She does not bellow at him. She asks him just what it was she did that was wrong and says she is terribly sorry.

UNMUDDLING OUR MOTOR REGULATIONS.

THE fifty-seven varieties of motor laws and regulations which obtain throughout the United States, as applied to the more than ten million motor vehicles on our roads, are reported to have resulted in one of the most thoroughgoing muddles in history. When the Twentieth Century Limited pulls out of the terminal at New York or Chicago, every foot of its thousand-mile run is safeguarded by standardized signals. When the *Majestic* leaves her pier and straightens out for a transatlantic voyage she is subject, over every knot of her course, to binding navigation rules and regulations. But, turning to the vast volume of motor-vehicle traffic which is flowing in endless streams by day and night over our roads and streets, "What do we see?" asks Arthur C. Mack, in *Motor Life* (New York):

What standardization of signals governs the movements of these more than 8,000,000 passenger cars and upward of a million commercial vehicles? In fixing these signals, what attention has been given to uniformity or to psychological reaction? Let us see.

Altho motor transportation is largely interstate, each one of our forty-eight States has its own set of traffic laws, and not content with this chaos there are other sets of regulations imposed by counties, cities, villages, and hamlets. There is a hodge-podge of laws on speed, lights, right-of-way, cut-outs, etc., etc. Sometimes, as with New Jersey, for instance,

"Some present from Dad"

WHAT a wonderful thing it will be for any boy whose Dad makes it possible for him to take his first lesson on Christmas day on his very own

BUESCHER True-Tone Saxophone

Every boy should play some musical instrument. Of all musical instruments, the True-Tone Saxophone is the most popular. It is the one that just fits a boy's fingers, appeals naturally and instinctively to musical natures.

The tone of the Saxophone is full and rich. It attracts and tempts a boy to play it. It encourages him to get out and develops his musical talent.

A Saxophone will help keep your boy out of mischief by occupied with things worth while. It will help to improve his time instead of wasting it, it will bring him in contact with better, cleaner associates.

Easiest to Play

The Buescher Saxophone is so perfected and simplified that it is the easiest of all musical instruments to learn.

It is the instrument that everyone can play and it wholly satisfies that longing everybody has to personally produce music.

Your boy can learn the scale in an hour's practice, play popular music in a few weeks and take his place in an orchestra or band within a few months.

Nothing can take the place of the Saxophone for home entertainment, church, lodge, school. It increases the pleasure you get out of life, increases your popularity and your opportunities.

$500 to $1000 weekly for but two hours a day is not uncommon for those with ability to play Buescher Instruments. Have helped make famous Paul Specht and his Orchestra, Jean Goldkette and his Orchestra, Vincent Lopez and his Orchestra, Ben Selvin and his Orchestra, Rega Records, Brunswick Records, Clark and Randolph Records, Cleo Brown and her Trio, Clay Smith, Guy Holmes, Henry Busse, Columbia Records, Gene Rodemich (Brunswick Records) and thousands of others. Your boy might develop equal ability.

JOSEPH C. SMITH
Director Joseph C. Smith's Orchestra, always famous for its fine records and now making Brunswick Records exclusively. Plays Buescher Band Instruments and Saxophones.

Free Trial—Easy Payments

GENE RODEMICH
Directs Gene Rodemich's Orchestra. Hear them in Brunswick Records (for dancing) playing Buescher Instruments.

We make it easy for you to get your boy a Saxophone this Christmas. You may order any Buescher Saxophone, Cornet, Trumpet, Trombone or other Band or Orchestra Instrument without paying a cent. Then play it for a whole week without obligation. If not entirely satisfied, return it at our expense. If you like it, pay for it a little each month to suit your convenience.

PAUL S. SPECHT
Director Paul S. Specht and his Orchestra. Hear his Buescher Saxophone in superb Columbia Dance Records.

Saxophone Book Free

After one has learned to play one of the Buescher instruments he is almost entirely independent of sheet music. He can play popular music by ear. He can improvise his own jazz effects. He can play in harmony with others. He can play in trio, quartette, etc. It is the instrument for home entertainment, church, lodge, school, orchestra and band.

Our Free Saxophone Book tells which Saxophone to play—the alto, tenor, C melody, baritone, bass or cello and bass parts, and many other things you would like to know. Ask for your copy now.

picture to myself the solicitation of advice from industrial leaders on the part of our university professors.

There is nothing dishonorable in a university scientist seeking a patent. On the contrary, he gains enormously thereby in international prestige. Of course he usually is condemned at home by the university drones unable to comprehend the value of ideas other than their own; but such childish criticisms are negligible.

The establishment of a 10-year period for research in pure science for a man after receiving his doctorate is all well enough and admirable for the future of both university and industry, no matter where the young man casts his lot, but the salary paid is usually so small during the early years of this constructive period that barely a living wage is afforded the scientist. Physically he may become more or less a wreck.

The financing of these men and their investigations brings out the proposal which the authors have suggested. They argue that the industries will gladly pay for patents then obtainable after assignment to the universities. This is all true enough, but there will be so little of patentable nature that the university and the investigator will reap greater renown if he goes on his quiet way with never a thought of patent or legal advice until he himself runs across something which he recognizes is new and which he is anxious to secure in his own name.

GELATIN, A PARTIAL FOOD

THAT gelatin is a true food, although nourishing only when taken with certain other foods, is asserted in *The American Food Journal* (New York) by Robert Herman Bogue, industrial fellow of the Mellon Institute, Pittsburgh.

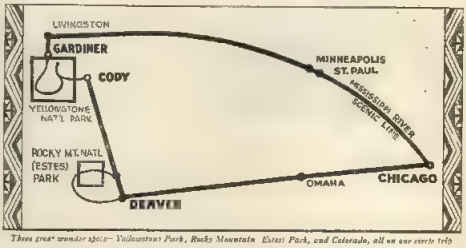
In the minds of some people, says Mr Bogue, there exists a prejudice against the use of gelatin on account of the relationship which they think that it bears to glue, and to what they believe to be the source of the product. From the days of our childhood we have heard that gelatin was made from horns and hoofs, but this is not true. Neither gelatin nor glue can be obtained from that source. He goes on:

Gelatin and glue are obtained by cooking pieces of skin, tendons, cartilagenous material, and bones, with water below the boiling point. The fundamental distinction between edible gelatin and glue lies in the selection of the raw material, and the care exercised in handling. Only the perfectly fresh, clean, healthy stock is permissible for the manufacture of edible gelatin. After a very thorough washing the materials are allowed to soak in lime water sometimes for several weeks. Further washing follows and the lime is neutralized with an acid and again washed. The cooking is conducted in enamel or other non-corrosive tanks. Bacterial contamination is especially guarded against. When gelatin is prepared in this manner, and no subsequent deterioration has occurred, there can be no reasonable objection raised, from an esthetic point of view, to its use in the dietary.

We are not permitted to regard gelatin as the equivalent of the combined proteins, such as are found in milk, meat, eggs, etc.

That it functions as a true food is proven,

THE route to Yellowstone Park



Three great wonder spots—Yellowstone Park, Rocky Mountain (Estes) Park, and Colorado, all on our circle trip

Note where your Burlington-Northern Pacific Vacation takes you—for the price of a round-trip ticket to Yellowstone alone!

Enter Yellowstone through Gardiner Gateway—tour the park—leave over Cody Road—words cannot describe it. Then, Colorado—side trip to tranquil Rocky Mountain (Estes) Park. Thence Denver and near-by vacation regions direct, or across the Continental Divide to Grand Lake and back through Denver's Mountain Parks. In one trip, on through trains!

Vacation costs are down

This year your dollar goes much farther. You can now afford to see the wondrous West.

TEXACO GASOLINE

THE *VOLATILE* GAS

Volatility is the readiness with which gasoline gives up its power

BEFORE 1902 The Texas Company did not exist. In but 20 years the public demand for Texaco Products has built a business of immense size.*

This widespread demand is so insistent as to compel a continuous and rapid increase in production and distribution. The public shows its appreciation of *distinctive, uniform quality* in an unmistakable way.

This great demand for Texaco Products is final proof that the soundest scientific practice in the refining of petroleum, pays Every Texaco Product is made upon this important principle.

Texaco Gasoline is a good example. More power and readier, was the universal wish. Texaco Gasoline gives it, through high and uniform volatility.

Texaco Motor Oil is another instance; the Oil famed for its heavy body and its refinement to a *clear, pale* color.

That Texaco Gasoline is the *same* wherever you fill your tank, is a vital point of its popularity. Touring in New England in summer, or beneath Florida palms in winter, visiting America's wonder-scenes such as the Grand Canyon, or the Rockies, or Niagara, or the unsung beauty of thousands of less known places, you find that the trail leads to the Texaco Red Star.

At these filling stations you always find Texaco Gasoline and Texaco Motor Oil, and the satisfaction of improved operation and upkeep.

THE TEXAS COMPANY, U. S. A.
Texaco Petroleum Products

*In the last ten years the consumption of Texaco Gasoline has increased from 160,000 to over 1,000,000 gallons a day.

Roofs of Striking Beauty at Little Cost—

An artistic colorful roof! Nothing adds so much to the charm of a home, be it cottage or mansion

Yet a roof of striking beauty—of Barrett Everlastic Shingles like the one pictured—is very inexpensive It is moderate in first cost and practically free from maintenance expense

Barrett Everlastic Shingles are reinforced on the weather-side with an everlasting mineral surface in fadeless natural colors either a cool green, or a warm cheerful red. And on the under side a "seal-back" of special waterproofing compound stubbornly resists the deteriorating action of air and moisture.

The four styles of Barrett Everlastic Roofings briefly described at the right -two kinds of roll roofings and two forms of shingles include roofing suitable for any type of steep-roofed building. They are all moderate in price, easy to lay, and soundly economical

Be sure you get a Barrett Everlastic brand

SOUP MAKES THE WHOLE MEAL TASTE BETTER

Aiming straight I'm here to state
Brings you home the winner.
Just aim at health and you'll have wealth—
Eat Campbell's for your dinner!

A hit every time!

Because it makes your appetite "sit up." Because it starts your meal off with a snap. Because it tastes so mighty good and meets your hunger more than half way. That's why you like Campbell's Tomato Soup. And remember it. And want it over and over again.

Cream of Tomato

made with Campbell's is a dish of special luxury. Heat separately equal portions of Campbell's Tomato Soup and milk or cream. Be careful not to boil. Add pinch of baking soda to the hot soup and stir into the hot milk or cream. Serve immediately. Many prefer to use evaporated milk for an extra rich, thick Cream of Tomato.

Delightful variety in Campbell's Soups

This Gold Seal Identifies America's Most Popular Floor-Covering

THESE little corner glimpses, printed here in but two colors, can give you only the slightest hint of the real charm of Gold Seal Congoleum Art-Rugs. To fully appreciate their beauty and variety of coloring and design you must see the rugs themselves.

Look for the famous Gold Seal Guarantee, which stores that sell Gold Seal Congoleum Art-Rugs usually display in their windows. This Gold Seal is your protection against imitation floor-coverings. Also be sure to look for it on the goods when you buy.

Patterns for Every Room

There are patterns suitable for every room in the house—simple tile designs for kitchen and bathroom, restful color combinations for bedroom, dining room and living room. You will be charmed by their beauty and coloring—amazed at their very low prices.

Waterproof—Sanitary—Need No Fastening

And Congoleum Art-Rugs are so easy to clean and so practical. A light mopping makes them bright and spotless in a twinkling. They hug the floor, *without fastening of any kind.*

Note the New Reduced Prices

6 x 9	feet	$ 8.10	1½ x 3	feet	$ .50
7½ x 9	feet	10.10	3 x 3	feet	1.00
9 x 10½	feet	14.15	3 x 4½	feet	1.50
9 x 12	feet	16.20	3 x 6	feet	2.00

The rugs illustrated are made only in the four large sizes. The small rugs are made in other designs to harmonize with them.

Owing to freight rates, prices in the South, west of the Mississippi and in Canada are higher than those quoted.

Attractive designs and colorings, durability, ease-of-cleaning and amazing economy of price—small wonder that Congoleum Gold Seal Art-Rugs are America's most popular floor-covering!

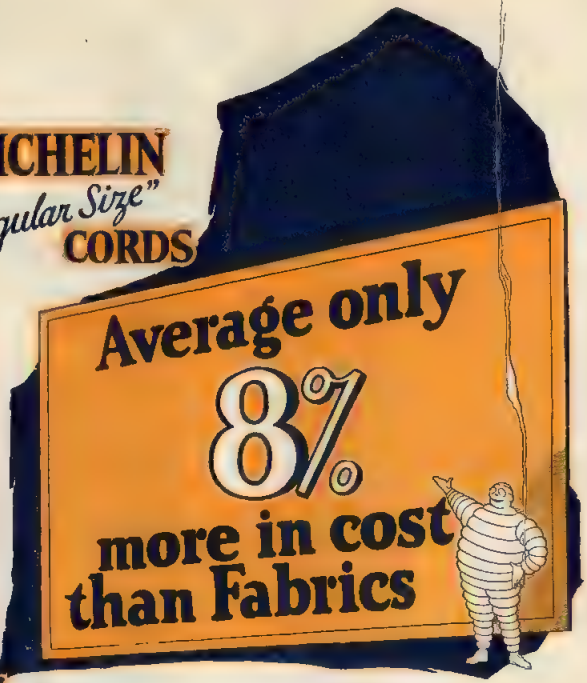
MICHELIN
"Regular Size" CORDS



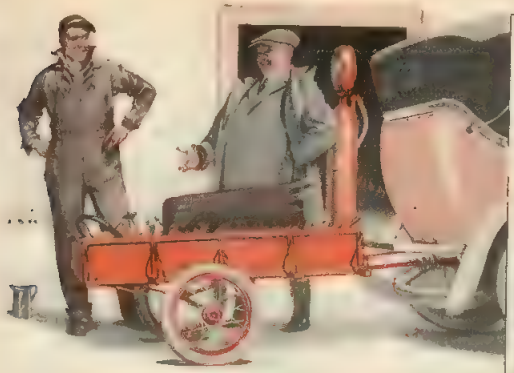
HERE is the tire for which hundreds of thousands of motorists have been waiting. A tire that gives an average of 30% more mileage than a fabric, as proved by tests covering hundreds of thousands of miles—yet costing only 8% more—in other words, 22% mileage free.

These new cords are the same size as your fabric tires and interchangeable with them, and may be fitted one at a time as your fabrics wear out. Thus you may change to cords by easy stages at practically no increased expense. Just ask the nearest Michelin Dealer about "Regular Size" Michelin Cords.

MICHELIN offers a complete line of cord tires, oversize and regular size, in one quality only, the best—all just as good as the famous Michelin Ring-Shaped Tubes

MICHELIN TIRE COMPANY, MILLTOWN, N. J.

Wholesale branches in 30 leading cities. Dealers everywhere



"I'm prepared for the Worst

. . . Give me a Quart of Oil"

AT LEAST 50% of all serious engine troubles are traceable to the careless request—"*Give me a quart of oil.*"

You can't dodge this fact.

There is a wide gulf between the average "pick-up" oil and Gargoyle Mobiloil.

We suggest you ask for Gargoyle Mobiloil, being particular to specify the correct grade for your car.

How the Right oil saves money

Many motorists expect entirely too little from their lubrication.

The grade of Gargoyle Mobiloil specified for your car feeds adequately to every friction point. It protects. It seals the piston rings against blow-by of gasoline and power—it saves gasoline. It cuts down operating troubles. And you will be surprised at your greater freedom from carbon.

Yes: Gargoyle Mobiloil costs a few cents more per gallon. It costs more to manufacture. But you will see the real economy of this few cents difference after you observe the operating results.

Not a gasoline by-product

Nine out of ten lubricating oils on the market are simply by-products in the manufacture of gasoline.

Gargoyle Mobiloil is *not* a by-product.

It is produced by lubrication specialists who are recognized the world over as leaders in lubricating practice. Gargoyle Mobiloil is manufactured from crude oils chosen for their *lubricating* qualities—not for their gasoline content. It is manufactured by processes designed to bring out the highest *lubricating* value—not the greatest gallonage of gasoline.

This is one of the essential reasons for the superiority of Gargoyle Mobiloil.

Warning!

Don't be misled by some similar sounding name. Look on the container for the correct name *Mobiloil* (not Mobile) and for the red Gargoyle.

Chart of Recommendations

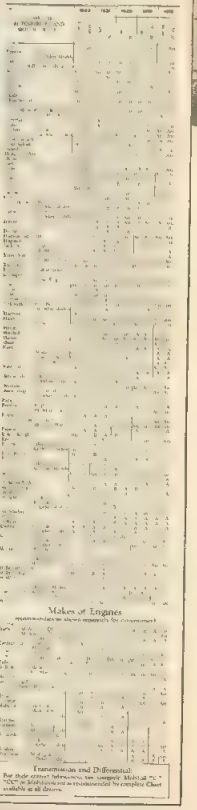
(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

How to Read the Chart — A means Gargoyle Mobiloil "A"; B means Gargoyle Mobiloil "B"; BB means Gargoyle Mobiloil "BB"; Arctic means Gargoyle Mobiloil Arctic.

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperature may be experienced.

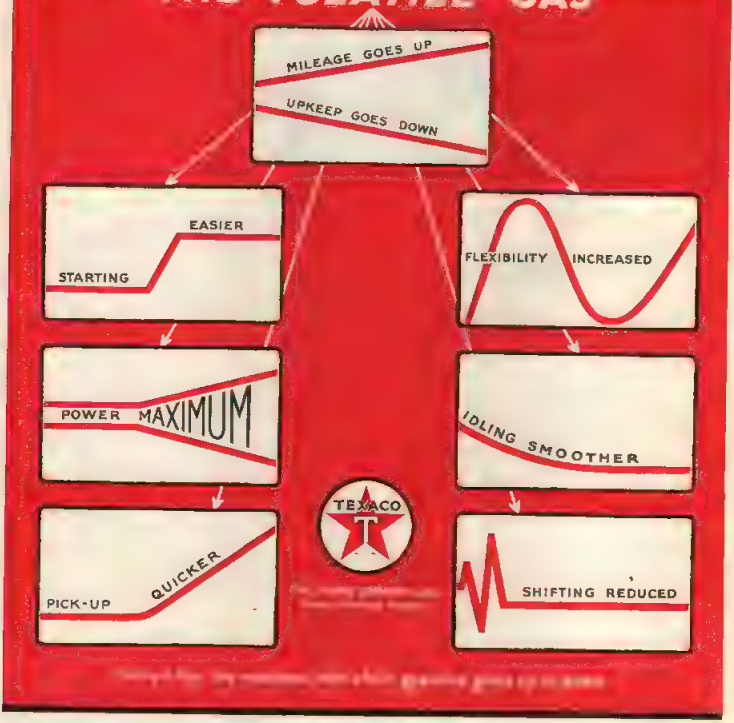
The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.



VACUUM OIL COMPANY

TEXACO GASOLINE

THE VOLATILE GAS



TEXACO

GASOLINE MOTOR OILS

The Volatile Gas — *The Clean Clear Oil*

The vital instant

in a motor comes when compression is complete, piston at top and spark fires. Every ounce of traction delivered to the rear wheels results from the action of the gas at that vital instant. Upon the degree of volatility of the gasoline depends the translation of every molecule into maximum energy at that vital instant.

TEXACO GASOLINE

THE *VOLATILE* GAS

(Volatility is the readiness with which gasoline gives up its power)

The high volatility of Texaco Gasoline comes into evidence in many ways; perhaps most unmistakably in the congestion of city traffic, where its delivery of quick impulse in response to the accelerator is sure to be observed and appreciated.

Texaco Motor Oils are heavy-body lubricants, and are distinguished by their clear, pale color. Light, medium, heavy and extra-heavy—they fit all cars and all conditions. You will find them wherever you see the Texaco red star*.

THE TEXAS COMPANY, U. S. A.
Texaco Petroleum Products

*In ten years the consumption of Texaco Lubricating Oils has increased from 300,000 gallons per month to 7,500,000 gallons per month.

TEXACO

GASOLINE MOTOR OILS

Winter Troubles

come from "GIVE ME A QUART OF OIL"

How to safeguard your engine

COLD WEATHER! What makes starting so difficult? Perhaps incorrect lubrication is adding to your winter engine troubles.

True: the engine is cold. True: gasoline vaporizes more slowly in cold weather. Lubrication won't help these conditions.

But scientifically correct lubrication *is* of special importance in winter. The grade of Gargoyle Mobiloil specified for your car will assist you to start your engine more quickly and with greater protection than inferior oils possibly can.

Why? Because every winter requirement of your car was studied and provided for when the Vacuum Oil Company's Board of Automotive Engineers prepared the recommendations which you see in the Chart.

Winter factors are: the design and construction of the engine—the type of lubricating system—the location of the oil pump—the size and mesh of the oil screen—the size and possible exposure of the oil piping.

Get economy All Winter

The grade of Gargoyle Mobiloil specified for winter use in your engine begins to circulate when the engine starts. Quicker starting and full protection are assured. This quicker starting lessens the drain on your battery. You do not need to use the choker so much—and thus the oil is not so quickly diluted with raw gasoline.

To get this thorough protection against winter engine troubles we suggest that you draw off all old oil while the engine is warm. Do not flush with kerosene. Then re-fill to the proper level with the correct grade of Gargoyle Mobiloil.

IMPORTANT: Many cars require more fluid oils in winter than in summer. Where such change is necessary you will find it plainly indicated in red on the partial Chart shown at the right. If your car is not listed in this partial Chart, the dealer from whom you buy Gargoyle Mobiloil can easily tell you the correct grade from his copy of the complete Chart.

Protect yourself against By-product Oils

Of course, oils which are by-products in the manufacture of gasoline cannot give you the fullest protection against winter troubles.

So, make sure that you see the red Gargoyle and the full name—Gargoyle Mobiloil—on the container when you buy lubricating oil. Then you will get oil which is made only from crude oils specially selected for their lubricating value.

Valspar—the Varnish of countless uses—

DUKE KAHANAMOKU of Hawaii, famous athlete, expert on the surf-board and world champion 100-metre swimmer has discovered still another use for Valspar. Duke Kahanamoku writes:

Honolulu, T. H., May 3, 1921

"Have used Valspar on my surf-boards for several years, and find that it preserves the wood, because it is waterproof and prevents the water from soaking in. No matter how long the board is used in the water, the Valspar is not affected and does not change color." DUKE KAHANAMOKU.

Valspar is durable, easy to apply, weatherproof and *waterproof*—"the Varnish that won't turn white."

Valspar's well-known uses—on floors, furniture, woodwork, linoleum, airplanes, boats and railroad trains—are supplemented by countless others such as

Baby Carriages	Golf Clubs
Window Screens	Tents
Trunks	Fishing Rods
Hand Luggage	Tennis Rackets
Wicker Furniture	Oilskins
Refrigerators	Gun Stocks
Fireless Cookers	Snow Shoes
Draining Boards	and Skis
Boots and Shoes	Etc., etc.

In fact, anything that's worth varnishing is worth Valsparring.

VALENTINE'S VALSPAR VARNISH-STAIN

THE GOLDEN RULE OF HEALTH—EAT SOUP DAILY

Here is a game the kids acclaim
With vigor, vim and zest
Their pep and force derived, of course,
From "Ox Tail" at its best.

—and thereby hangs a tale

Campbell's is Ox Tail Soup at its best. Not merely a deliciously satisfying food but a recognized health-builder as well. It brings you, in a tasty dish, the native vigor of meaty, marrowy ox joints; the beneficial properties of fresh vegetables and herbs; the strength-building qualities of barley.

Campbell's Ox Tail Soup

A rich, nourishing stock made from medium-sized ox tails, combined with diced Chantenay carrots and golden turnips, tomato puree, sliced ox tail joints, celery, parsley, barley, a little leek, and a touch of flavoring to bring out the natural savor of this delicious combination. Order Ox Tail today.

An Appreciation of a World Tribute

It would be ungrateful indeed if the builders of the Cadillac did not pause at this time to express appreciation for the tribute accorded by the public to the Type 61 Cadillac.

This improved Cadillac has received a degree of enthusiastic approval unique even in Cadillac's long-triumphant history.

The results logically accruing from such approval are evident. This has been Cadillac's most successful year. The greatest of past sales records have been exceeded by thousands of cars.

But more gratifying by far to Cadillac builders than an unprecedented sales record is the unbounded admiration evoked by the new high level of mechanical success that the Type 61 Cadillac has attained.

The new Cadillac has demonstrated, so convincingly as to leave literally no room for argument, that it possesses a degree of power and dependability unequalled by even the finest preceding Cadillac.

Is it surprising, then, that the allegiance of the vast body of Cadillac owners and friends has grown deeper and deeper—that all who appreciate the finer points of automobile performance have joined with the leading automotive critics of Europe and America in paying unqualified tribute to the Type 61 Cadillac?

This tribute, manifest in the spoken word, in the written word, and in the greatly augmented sales volume, constitutes, we believe, the highest token of esteem that the world has ever shown a fine motor car.

Cadillac builders have known twenty years of acknowledged leadership. Yet at such tribute they experience a renewed enthusiasm for the accomplishment of their ideal—the production of the finest automobile that human ingenuity can conceive.

CRAFTSMANSHIP IS A CREED HERE, AND ACCURACY A LAW

Even to observers of the finest automotive plants in Europe and America, the new Cadillac manufactories are a source of wonder and of admiration.

The fact that the site embraces more than 49 acres, and that the buildings provide a floor area of more than 2,500,000 square feet, is in itself sufficiently impressive.

But even the great structural magnitude of the Cadillac plant is surpassed by the orderly production and the exquisitely precise machine-equipment within. Craftsmanship is a creed here, and accuracy a law.

Thousands of the instruments of manufacture, expertly contrived and almost unbelievably exact, were designed especially to meet the requirements of Cadillac.

Every process of construction is pursued with microscopic carefulness. More close, fine measurements are observed on the Cadillac, it is believed, than on any other car.

In appearance, the motif of the vast new Cadillac works is immensity; but its spirit and its greater source of wonderment are minute precision in every smallest dimension and operation on the Cadillac car.

©1922, Cadillac Motor Car Company

One quality that women praise is the luxurious comfort of the new Cadillac.

They discover it in the spacious interior and in the restfulness of the deep, soft cushions.

It is wonderfully apparent in the ease and the evenness of Cadillac travel.

She that drives the car refers, with elation, to its comfortable control, its quick obedience to the slightest turn of the wheel.

There is just as real and just as satisfying a sense of comfort in the knowledge of Cadillac dependability.

Indeed one seldom need think of the mechanics of the Cadillac save to congratulate one's self on the surety of their functioning.

It is the unanimous opinion of owners, and our own judgment as well, that motoring comfort is raised to a new and indescribably delightful degree in the Type 61 Eight-Cylinder Cadillac.

Why Nothing Compares With Chevrolet

for Economical Transportation

The selling prices of all automobiles are based on the cost of material, production, distribution and overhead.

Large volume of sales greatly reduces all these costs.

We are the world's largest producers of quality automobiles. We operate on the basis of large volume, moderate margin of profit and rapid turnover of investment. For these reasons we are able to price our cars so low as to give the purchaser the maximum in modern economical transportation per dollar of cost.

By *modern* we mean up-to-date engineering with design, construction, finish and appointments consistent with today's requirements of an informed and experienced public.

Some Distinctive Features

Streamline body design with high hood; vacuum feed and rear gasoline tank on all models; drum type head lamps with legal lenses. Curtains open with doors of open models. All closed models have Fisher bodies with plate glass Ternstedt regulated windows, straight side cord tires, sun visor, windshield wiper and dash light. The Sedanette is equipped with auto trunk on rear.

See the 1923 SUPERIOR Model closed cars.

No argument is necessary: they sell themselves.

His Gift to Her—and the Family

A Mutual Christmas Gift That Provides Usefulness, Health and Happiness For Them All

Millions of dollars are spent annually for family Christmas gifts. The purpose is to express good will and bring happiness to all.

How better can this be accomplished than by pooling the family Christmas fund and applying it on the purchase of a Chevrolet automobile?

Here, for example, is illustrated the Utility Coupe; an ideal all-year car for the small family. Then there is the 5-passenger Sedan or the 4-passenger Sedanette for the larger family.

If open models are preferred there remain the 2-passenger Roadster and 5-passenger Touring.

There is nothing the modern family needs so much as economical transportation. A quality car like Chevrolet delights every member of the family and makes Christmas joys last for years.

Think it over, consult the wife, then arrange with the nearest Chevrolet dealer to deliver your car on Christmas morning.

Man's Conquest of Time

The progress of mankind, from the earliest recorded ages, has been marked, by a ceaseless struggle against the limitations of time and space.

Civilization is mutual interchange of thought and the product of thought. This interchange demands transportation, hence the development of civilization has paralleled the improvements in transportation.

A useful lifetime should not be measured in hours lived, but in deeds done. Doubling man's productive capacity offers the same net result as doubling his period of usefulness or doubling the number of producers.

More than any other single factor of civilization, the automobile has multiplied the producing power of man, by decimating time and distance, and by providing a broad and flexible means for the transportation of men and their products.

The amazing growth of the automobile industry could not have been, had not the automobile more than justified itself as an economizer of manpower, a stimulator of production and a creator of wealth.

for Economical Transportation

CHEVROLET

epitomizes the progress of the industry to date along the line of maximum economy consistent with modern requirements as to engineering efficiency and satisfactory quality. The wonderful increase in our sales proves that Chevrolet is leading in the evolution of individual transportation which measures and records the progress of civilization.

What to Expect of a Closed Car

Chassis Quality and Reliability or Body Fittings—Which Do You Want at the Same Cost?

You are offered two types of closed cars at around $1245. One makes its appeal to the eye. Its makers call attention to the body fittings. Such luxuries are nice to have.

But clocks, dome lights, cigar lighters and vanity cases are not essential to comfort and they have nothing to do with car performance. However you must pay for them. To know how much they cost consider what the open model of such a car sells for.

The Essex Coach sells at $1245. The body is simple and sturdy, built for utility and comfort. Non-essentials are omitted. What they would cost is invested in motor, clutch, transmission, axles and frame. The Essex, one of the world's leading four-cylinder cars, never disappoints.

It is positively reliable. Carefree, untroubled transportation, at the lowest cost for fuel, oil, tires and maintenance, are assured

We believe you will find the highest satisfaction in a steering mechanism that operates as easily as a bicycle, in clutch, and brake pedals that respond to the slightest pressure, in freedom from squeaks, rattles, body noises and in performance that matches the costliest cars.

In no car can you get more than you pay for. It is for you to decide which type of closed car will give the most lasting satisfaction.

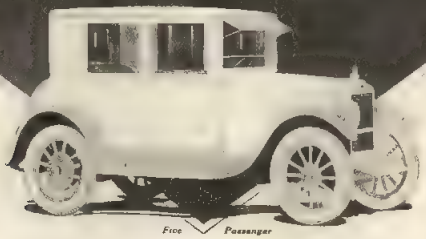
ESSEX COACH $1345



Performance as Notable As its Appearance

Don't Underrate its Importance

The Essex Coach operates with the nimbleness of an open car.

You will like the way it gets about as well as its good looks and comfort.

It won't cause annoyance with squeaking body and rattling doors. You will be pleased at the little service attention required to keep it in tip-top condition.

Motoring pleasures come from ease of operation—simple control—a free, quick, responsive car that goes at any pace, that darts in and out of traffic and flies up-hill without effort of driver or motor. For these qualities all know Essex excellence.

Has These Fine Car Details

Dash controlled ventilator.
Wind and rainproof windshield.
Fine quality plate glass windows.
Sun visor
Luggage and tool locker, opened from rear.
Newest type easy operating crank-handle lifts on door windows.
Four hinges on each door, and 6 hinges that hold door solid—very important.
Fine texture long wearing upholstery and rugs
Radiator shutters and motometer for efficient motor control
Cord tires.

And no sacrifice of these advantages is made to obtain the closed car comforts furnished in the Coach.

Remember when buying a closed car you will continue to require motoring performance. You will want to drive wherever you drove with your open car. You want its fleetness, its reliability and its economy.

These are advantages of the Essex Coach plus its protection, comfort and distinction. They are made all the more attractive by reason of the price.

You can't ignore that.

60 Sun Maid Raisin Salesmen buy ESSEX Cabriolets

Give Your Business Getters A Better Business Car

Why Sun-Maid Salesmen Chose Essex

Sixty Essex Cabriolets have been purchased by the salesmen of the Sun-Maid Raisin Growers of Fresno, Cal., to be used in 20 of their sales divisions in various parts of the U. S. and Canada.

This order is one of the greatest proofs of Essex dependability, for these cars will be called upon to give prompt and satisfactory service in all kinds of weather, under all sorts of road conditions. The records that thousands of other Essex cars have made, their ability to keep to schedules, low cost of operation, all were determining factors in this selection

Business has no patience with cars that can't stand the gaff. Repairs and wasted time quickly eat up the small saving in first cost

Get Real Economy

Give your salesmen a car they can count on like a train. The Essex Cabriolet gives all-weather utility. Its chassis costs more to build than any like-priced car in the world. Motor, axles, frame and transmission are built for steadfast, constant service under all conditions. Essex cars serving upwards of 60,000 and 70,000 miles are still smooth, reliable and economical. You can't get records like that except from a real car. And it's worth the little more you pay.

Salesmen Work Faster

The Cabriolet is solid, quiet, durable. Your men will like it. They will appreciate its greater riding ease, simple handling, greater radius of travel, and above all its positive reliability. It gives all-weather protection. There is ample carrying space in rear for sample cases, luggage, etc.

And it is more economical in every detail even than light cars whose only appeal is low first cost.

COMFORT IN ALL WEATHER AT OPEN CAR COST

Why Buy an Open Car Now?

When Closed Car Comforts Cost But $1245 *Freight and Tax Extra*

Why face winter in a cold and draughty touring car? The comforts of the Coach cost but a trifle more. It means warm, snug travel in all weather.

No need to meet wind, snow and rain in the half shelter of a curtained touring car.

Many denied themselves these comforts when closed cars cost almost double. But there is no such reason now. The Coach gives them all at an inviting price.

It is solidly and enduringly built. Doors and windows stay snug fitting. Low, deep cushioned seats of unusual comfort. Dash controlled ventilator and easily operated windows make the Coach ideal in summer as well. Luggage and tool locker opened from rear. Radiator shutters and motometer give summer driving efficiency.

It is just the car for family or business use—easily handled, of exceptional performance and famous among owners for reliability and economy.

More than 11,000 owners know these qualities. We believe it is exactly the car you want.

E S S E X

ESSEX MOTOR CARS

How Essex Views the Closed Car Question

Until Essex brought out the Coach, a closed car on a first rate chassis could not be had at a moderate price.

Buyers took to it by the thousands. Nothing like it was ever experienced in closed car sales. And in consequence other makers added closed cars to their lines.

But their bid for a share of the trade is not based upon the principle which gives the Essex its distinction.

Mark how different it is

Elaborate fittings intended to lend an air of luxury are not featured in the Essex. It is sold strictly on its merits as a complete and superb motor car mechanically It established itself as one of the leading four cylinder motor cars of the world in performance, endurance, reliability and economy.

One stock car under official observation traveled 3,037 miles in fifty hours. Four stock cars each lowered all previous time records between San Francisco and New York.

Essex cars that have traveled 50,000 miles are still giving satisfactory service. Owners will tell you one after another their next car will be an Essex.

You will hear from them the most astounding reports of reliability, low operating cost and freedom from even the slightest service attention.

It is upon such a chassis that the Coach is mounted The same idea of utility guided its creation. It has staunchness and character. It gives the utility of the costliest cars. It stays tight and secure.

Windows and doors remain tight fitting. There are no inside rumbling noises. Seats are comfortably arranged. Luggage and tools are carried in locker at rear. Observe how proudly owners speak of the Essex Coach.

Yet such a delightful closed body does not place the Essex Coach price beyond the reach of those who can afford a good open car.

This Challenge to Useless Expense the Greatest Closed Car Issue

You buy a motor car for reliable transportation. You prefer a closed car for comfort. Body accessories and ornaments have little to do with either.

Why pay a huge premium for them?

Within the limits of a moderate-priced closed car you can get only so much. Ornate body-fittings, dome lights, cigar-lighters, clock, vanity cases, etc., add nothing to car performance. They add much to cost.

Essex elects to put the value elsewhere—to build a comfortable, durable closed car of smart appearance—to mount it on the superb Essex chassis, with what American and European experts have called the greatest motor of its size in the world. The rigid, overstrength Essex frame, the smooth positive clutch, the simple controls and strong rear axle are some features of that chassis.

The way it is built explains why Essex cars after 60,000 and 70,000 miles of service are still giving fine, smooth, reliable service. The same idea of utility built the Coach body. It has staunchness and character. It gives the utility of costlier cars. It stays tight and secure.

Luggage and tools are carried in the locker at rear. Radiator shutters and motometer give summer motor efficiency in winter driving. Fine plate glass windows, operated by latest devices. Every essential of the complete closed car.

And isn't its assurance of continued satisfaction and real automobile service more important than showy body extras in the car that is to serve you?

ESSEX Coach $1245 *Freight and Tax Extra*

Did Closed Cars Cost Too Much?

Thousands thought so. And prior to the Coach, they stuck to open cars.

That simply meant they wanted to put their investment in chassis quality and dependability, rather than accept lesser mechanical value in a closed car.

Yet closed car advantages are too obvious to need comment. Everyone wants them provided they do not sacrifice chassis value.

So a Great Welcome Awaited the Coach

Essex invented the Coach to meet this plain demand of thousands. It gives every essential comfort of the costliest closed cars. It is solid, quiet, durable and attractive in looks. Yet of course its greatest value is in the famous Essex chassis which world experts have called the finest of its size built. It fully has confirmed that verdict by official proof.

Insist on Lasting Value

Open car cost shows the mechanical value you get in any closed car. And the difference shows what the closed body costs. So consider well the two types of closed cars that sell around $1300.

The Essex Coach at $1145 gives all practical closed car advantages on a chassis that costs $1045 in the open model.

In no car can you get more than you pay for. It is for you to decide whether your money shall go for a costly body or for real automobile performance and lasting quality.

ESSEX $1095

A Roomier Open Car—A Finer Chassis

You can have no appreciation of what this price buys until you examine and drive it.

To all that made Essex such a wonderful value in the past are added refinements and comforts never before offered in a car of its price class. Roomier seating, wider doors and greater riding ease, contribute something new in personal comfort.

The Result of Three Years' Experience

Back of the new Essex is all we learned in building 70,000 earlier Essex cars. Finer precision standards have resulted and Essex smoothness is even more pronounced. You will instantly note its greater beauty. Its care and attention are easier, cleaner, more convenient.

It will reveal a charm you never suspected in any except the large costly cars. Note how free it seems of usual limitations—how subdued all mechanical consciousness—how perfect its union with the driver's will.

It Improves In Service

And how rarely is an Essex offered for resale. Old owners tell you of a car so enduringly designed and built that its performance improves for thousands of miles.

But today's Essex combines advantages no earlier owner knows. Go see, and ride in it. It is the best Essex ever built, and at the lowest price.

Wider Seats.
Wider Doors.
Lubricated with an oil can no messy grease cups.
Thief-proof Lock, reduces insurance cost 15% to 20%.

ESSEX MOTOR CARS

ESSEX COACH $1345

Its owners like it—the best test of all

Driving an Essex is so free of fuss and effort that every owner praises that remarkable difference. The hours they spend in their cars, above all, are comfortable hours. Controls are easy and natural. One is hardly conscious the hand directs them. Gears shift as easily as lifting a fork at table. Light-steering as a bicycle. Light pressure operates brakes and clutch.

And so reliable that thousands go out from the sales-rooms and serve for thousands of miles without returning for even a minor adjustment. That, too, is an experience not common to motor car owners.

Drive the Essex. It is altogether different from any car you have ever driven. It will delight—and tempt you. Any dealer will be glad to arrange such a ride.

A Few of the Many Who Praise It

"This little Coach is a revelation Handles easier, runs smoother than any car I ever owned. I don't think I will ever want to drive a big car again."

F. CODA,
Jenks & Muir Mfg. Co. Detroit

"We are highly pleased with the Essex Coach. We like, especially, its simplicity, ease in operation, gas mileage, and price. I do not know of a car where you get as much for the money invested."

FRED E. BODIE,
Lincoln, Nebraska

"After owning various multi-cylinder cars, I was a bit skeptical whether I could be satisfied as to the four cylinder Essex Coach Have had ample opportunity to test its worth and must admit everything is on the favorable side of the ledger Economical in upkeep, satisfactory gas and oil mileage, and power and speed aplenty In short a 'delight' from every standpoint."

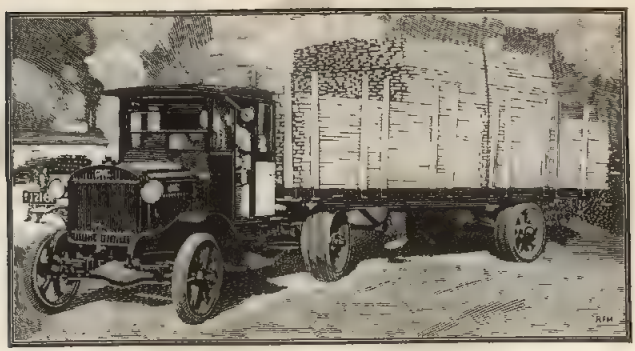
"GMC TRUCKS ARE SEVEN STEPS AHEAD"



Opening the Way for Volume Truck Haulage

GMC Truck Tractors, By Cutting Costs In Two, Now Make It Profitable To Transport Heavy Loads Over Highways

Development of the GMC Truck Tractors, with semi-trailer and four wheel trailer equipment, has for the first time made possible the economical transportation by motor truck of big tonnage loads.

GMC Truck Tractors produce more pulling power, more speed and more economy than ever before has been produced in any one truck unit.

Equipped with the GMC Two-Range Transmission, which multiplies economical engine power into new and almost unheard of power at the wheels, and into higher road speeds—these tractors will haul semi-trailer and trailer loads through heavy roads and up grades where other motor truck equipment cannot travel.

Loads as great as 15 tons can now be transported with a saving, in certain cases, of as much as 50 per cent over old style equipment, and with a distribution of the load that meets every requirement of safety to the structure of the highways.

Trailers and semi-trailers cut loading and unloading time to a minimum. They allow the wonderful power, speed and economy produced by this GMC Truck Tractor to be utilized to its fullest measure—not limited by what the truck alone can carry.

Write for a new illustrated booklet "Modern Freight Transportation."

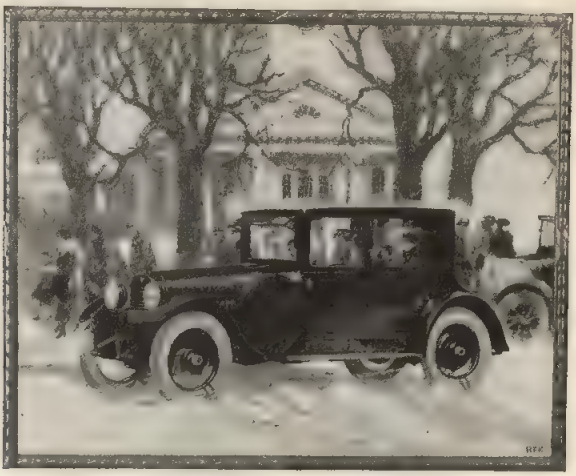
on the Famous Super-Six Chassis



Just What is its Value?

Important Thoughts for Closed Car Buyers

There are two types of closed cars that sell under $2,000.

Consider them well before you buy.

One features its fancy body and fittings with clock, trunk, dome lights, vanity cases and cigar lighter. In open models such a car sells at about $1,000.

The other type is the Hudson Coach, mounted on the famous Super-Six chassis. More than 120,000 Super-Sixes are in service. Official tests mark it one of the truly great automobiles. For seven years its sales have led all fine cars.

And with its new and improved Super-Six motor you get the best Hudson ever built. It has a smoothness unknown to earlier models. Its reliability and endurance excels even those Hudsons that have registered more than 100,000 miles of service.

And you will like the Coach.

It has a sturdy simplicity. Essential comforts are provided. There is nothing sluggish about its performance. It is built to stand the hardest kind of service. A trans-continental tour or a shopping trip can be made with equal comfort and security.

Doors and windows stay snug fitting. Rumbling noises are entirely absent. The seats are low, comfortable and cozily arranged. There is ample space for luggage and tools in the locker at the rear.

Radiator shutters and motometer give summer driving efficiency without need for hood covers in winter.

You will be proud to own a Hudson Coach.

MOST BEAUTIFUL OF THE HUDSONS

THE NEW SEDAN IS HERE

The De Luxe Car of the Year, $2295

It excels even those beautiful Hudsons which were counted matchless values at above $4,000—the Limousines, Town Cars and Landaulets famed for their distinction.

No other Hudson so completely sums the body-builder's art. It blends richness and luxury with a simplicity that is the hall-mark of Hudson enclosed car charm. And the promise of its beauty is borne out in the unusual personal comfort and serviceability this model affords.

It seats seven. The lustrous, lasting finish reveals the unhurried and painstaking care given every detail by master workmen, who have always specialized on the finest, costliest cars.

Of course it has the new Hudson Motor, which won such instantaneous admiration everywhere. It is the top step of seven years' development of the patented Super-Six principle. It is equally a revelation to Hudson owners.

WHAT FINANCIAL LONDON THINKS OF OUR FINANCIAL ALOOFNESS

IN one of his London dispatches to the financial section of the New York *Evening Post*, Mr. Arthur W. Kiddy, the well-known London financial writer, tries to give "the exact and impartial views of the financial district" concerning the apparent aloofness of the United States with regard to Europe's economic situation. In so doing he calls for cooperation between the United States and Great Britain for the benefit of the less fortunate Continent. As Mr. Kiddy speaks for the financiers of London:

Having regard to our readiness and ability to settle our debt to you, we feel that we have a right to rank with you toward the whole problem as a fellow-creditor nation. Starting on that basis, we regard the situation of all debtors, excluding ourselves, but including German reparations, as calling for strong and skilful treatment by lending countries like you and us, the object being to recover as much as may be possible of the original debts and also to restore at the earliest moment international trade. Failing this, further losses must be added to old debts.

It is considered, however, that such skilful treatment is impossible unless the two chief creditors cooperate in dealing with the situation. It is difficult to express the matter in a brief cable, but I trust that I have made it clear that I am entirely thinking of business arrangements and not of sentimental forgiveness and the breaking of contracts. Moreover, I must again insist, in order to prevent the danger of misunderstanding, that the whole argument is based on Britain's fully performing her own obligations to you; otherwise, of course, the whole argument collapses.

The action of your Senate with regard to Austrian assets is highly appreciated, and it is considered that this marks the first hopeful development in the European situation in some years. If Austria is now handled skilfully, the incident should react beneficially on other parts of Europe

NEW CONSTRUCTION WORK AS A SIGN OF RAILROAD IMPROVEMENT

GENERAL talk of improvement is all very well, but there is real significance we read in the New York *Journal of Commerce*, in figures presented by *The Railway Age* showing that there is more construction work actually under way or projected for 1922 by the railways than there has been for several years. Public announcement has already been made, says *The Railway Age*, of the construction of more than 500 miles of new lines this year, and contracts have already been let for at least half of this. A partial list of important projects definitely authorized is given by the railroad organ and is, in its opinion, "sufficient to demonstrate conclusively that the railways are viewing the future with more optimism."

"Attention is called, for instance, to an extension of 55 miles on the Atchison, Topeka & Santa Fe from Satanta, Kansas, west, and a line 40 miles long from Pawhuska, Okla., to Owen, which are understood to be the first of several projects

The New Oakland Six

A Short Talk to Ten Million Car Owners

You are interested in the automobile industry. You follow its progress, its new achievements. Therefore you are bound to be interested in the Oakland Six-44.

This New Oakland Six in a few short months has won wide approval. Owners attribute this to its wonderfully dependable overhead-valve six-cylinder engine; to its remarkable reliability; its endurance, smooth performance, and striking new body lines.

Have you studied this car closely? Have you learned of its flexible, dependable, economical performance—backed by the unparalleled 15,000 mile written guarantee? Give the matter careful thought We believe you will agree that the New Oakland Six is an unequalled six-cylinder value at an astonishingly low price.

A NEW SUPER-SIX HUDSON SEDAN $2295 *Freight and Tax Extra*

For Those Who Want The Finest 7-Passenger Closed Car

Particular attention is called to the price of the Hudson Sedan—$2295—for two reasons.

We offer the Sedan as the very finest closed car that can be built. It is the product of one of America's oldest builders of costly bodies. The workmen have never been hurried. Painstaking care is expressed in every detail. Quantity production, as understood in motor car building, is not possible with such traditions and organization. But the costly though worth-while way of manufacture under such conditions has been greatly minimized by the fact that the entire effort of this builder is exclusively devoted to the Hudson Sedan. Thus we obtain the richness and finest of the most exclusive custom built bodies and at the cost of quantity output.

No car at its price that has a body of approachable attractions in richness and luxury is so well regarded for performance and reliability. For you know the Hudson Super-Six, by official mark, is one of the world's truly great motor cars. And with the new improved Super-Six motor it is a smoother, more enduring car than the 120,000 earlier models which during the past seven years gave it such wide fame.

And where you find a car of comparable appeal in body and in automobile performance you will also find the cost is from $1,000 to $1,500 greater than for the Hudson Super-Six, seven-passenger Sedan.

THE SPICE OF LIFE
Continued

Keeping the Balance.—A representative government is one that elects six men in favor of a thing and six against it and wonders why something isn't done.—*Warren Chronicle.*

Even Scarcer. "Here's a man found nine pearls in an oyster stew. Wonderful, hey?"

"Oh, fairly startling. I thought you were going to try to lead me to believe he found nine oysters."—*Louisville-Courier Journal.*

Tolerance.—"Do you feel resentful toward a man who disagrees with you?"

"Not at all," replied Senator Sorghum: "so long as I can see to it that he remains associated with the minority."—*Washington Evening Star.*

Safety First.—"Admission two eggs" was the price recently charged for a concert in Wurttemberg. This plan of protecting the performers by cornering all the ammunition might be borne in mind by those meditating a political career.—*London Opinion.*

The Higher the Fewer.—THE WIFE—"I see by to-night's paper that Paris says women are going to wear their dresses longer."

THE HUSBAND—"It's a good thing. You never wear a dress over a month."—*Inklings.*

The Irish Mail.—An American visiting Ireland asked a manservant at a tavern, "How many mails do you have here a day?"

The servant replied, "Three: dinner, breakfast and supper."—*The Christian Evangelist (St. Louis).*

In Competent Hands.—"I will admit I haven't always lived as I should but I do love your daughter sincerely, and if ever I should make her unhappy, I hope I will be made to suffer for it."

"Don't let that worry you, she'll attend to that."—*Tit-Bits (London).*

The Hard Part.—MILLIONAIRE (speaking to body of students)—"All my success, all my tremendous financial prestige, I owe to one thing alone—pluck, pluck, pluck."

STUDENT—"But how are we to find the right people to pluck?"—*Dinuba Sentinel.*

No Common Man. While Chief Justice Taft was delivering a lecture in Portland, Ore., his friend, Bishop Keator, entered the auditorium, and the ex-President immediately sandwiched this story into his talk.

The Bishop was absorbed in a book while seated in a Pullman car. The porter scrutinized him very carefully, and said, "Scuse me, Senator, anythin' ah kin do fo' yo', suh?" The Bishop replied in the negative.

The porter returned again soon, and asked, "Shall ah open de window, Guv'ner?" The response once more was, "No, thanks."

A third excursion he ventured, "'scuse me, Kuhnel, kain't ah brush yo' off?"

The Bishop looked up. "Listen, porter," he said, "I'm not a senator, or a governor, or a colonel; nothing but a poor, common Episcopal bishop."

"Yassah, Bish'p," replied the darky, "but ah jes' don' knewed yo' wuz one o' dem face cawds."—*Judge.*

Have You Seen Oakland's New Closed Cars For 1923?

The moment your eye rests upon the rare beauty of these New Oakland closed cars, you will covet possession of one or the other. Somehow you will sense, instantly and keenly, that the motor car market has no more satisfying cars to offer you.

Both of the new 1923 bodies are built by Fisher. Their new and distinctive beauty; their symmetry of line and authentic grace, complemented with a wealth of interior appointments and refinements—some luxurious, many exclusive, but all useful—mark them for instant and uncommon admiration wherever fine cars are gathered.

Mounted on the standard Oakland chassis, these new models are powered with the six-cylinder, overhead-valve, Oakland-built engine—the only engine in the world with a performance guaranteed in writing for 15,000 miles.

This union of beauty with sound and enduring mechanical construction insures to these closed cars that quiet, vibrationless and certain performance so essential to complete closed car satisfaction.

We ask only that you see these new models and compare them critically with any others built. After that, you will share our conviction that they embody a higher order of beauty and utility than you can possibly find elsewhere at prices so remarkably low.

glide into the airdrome in order to make a landing.

A special commutator enables the operator to put any two of the panels in series and the information gained by so doing enables the exact position of the machine in relation to the cable to be determined. Thus, by placing in series the longitudinal and transverse vertical panels, the operator can determine whether the machine is inclined to right or left in relation to the cable. In order to determine whether the machine is approaching the cable from left to right, or from right to left, the longitudinal and horizontal panels are placed in series. Placing the transverse and the horizontal panels in series serves to indicate the vertical distance above the cable; in other words, it shows whether the cable is running up or down the side of a hill or mountain, or whether it is running horizontally over flat ground. By the use of the Loth cable a machine can thus travel along over any sort of country, the navigator knowing his position, and knowing that he can not accidentally run into a hill in the fog, as his receiver will warn him if he approaches too close to the cable. If this happens while the machine is flying horizontally he knows that the cable is running up the side of a hill, and if he is on a familiar route he will probably know which is the hill in question. Put in another way, the guide cable is both a direction wireless and a contour map of the route flown.

It goes without saying that the inventor had many difficulties to surmount, difficulties not directly connected with his system, but which had a considerable effect on its development. Thus it was found that the magnetos caused such a noise in the receiver as to drown, or nearly so, the sound from the wireless panels. To overcome this difficulty it was necessary to explore the magnetic fields of the magnetos thoroughly, and this was consequently undertaken and brought to a successful conclusion.

Mr. Loth has also found means of interrupting the sound from the wireless panels for the very short interval occupied while the spark plugs are giving of sparks. In point of fact, the receiving in the telephone ear piece is intermittent, but the intervals are so short as to be inaudible to the human ear which hears the receiving as if it were continuous.

The practical results obtained with the Loth guide cable are said to be briefly the following:

With the horizontal panel (2) contact with the cable has been established from an altitude of 10,000 ft. With the two vertical panels contact has been attained from a height of about 8,000 ft. At an altitude of somewhat over 6,000 ft. the operator can hear on all three panels, and can begin to guide the machine without being much disturbed by the various noises on board. At lower altitudes the receiving becomes very loud. When flying at about 6,500 ft. the cable can be "picked up" from a horizontal distance of approximately one mile. As the machine flies lower, what might be termed the "useful zone" increases in width, until at ground level the range is about 9 miles.

These results were obtained with an experimental cable of 9,500 ft. in length and having eight sharp angles in it. The longest straight length was less than 2,000 ft. It is confidently expected that with a proper line, running more nearly straight, and of greater length, even better results will be obtained.

THIS Spring, drive an Oldsmobile Four. You will enjoy the feeling that comes with riding in the best looking, the best performing and the most economical 4-cylinder car made—regardless of price.

You will enjoy this car because it is so much more than just beautiful. It is pleasureful—comfortable in its perfect riding qualities—enjoyable because it handles so easily.

Of course, there are particular reasons for this—a spring suspension almost equal to its wheel-base is one—the exclusive design of its frame construction is another. It is a restful, easy-riding, roomy four cylinder car, equally easy to handle in city traffic or tough cross country driving. Its wheel-base is 115 inches—unusually long for a four cylinder car.

And it is economical—principally because of the supreme care with which it is built, but basically because it is Oldsmobile. Oldsmobile's twenty-four years of experience in engine design has evolved the surprising gasoline and oil economy of this 4-cylinder motor.

There is an Oldsmobile dealer near you—with an Oldsmobile Four that he will be proud to show. If you wish, we will send you a specially prepared little booklet entitled "Speaking of Power," and our dealer's name and address, whether you are figuring on buying an automobile now or not.

Ask your nearest Oldsmobile Dealer about the General Motors extended payment plan

Wherever you go, you see Packard trucks; and everywhere you see them, they are on the job, doing their work without apparent strain or effort.

It is this ***known consistency*** of service which has won for Packard Trucks the special confidence, not only of fleet users, but of truckmen, and business firms, using but one or two trucks.

Such users must have a truck that they can depend upon, month after month, and year after year,—and they enjoy this reliable performance, in fullest measure, in the Packard.

They find, too, that Packard's first cost is lower, generally, than that of any other truck which may be said to compare with it in quality; that its after costs are also lower; and that it depreciates more slowly.

Packard Trucks range in capacity from 2 tons to 7½ tons; and in price from $3,100 to $4,500

In 682 cities and towns throughout the United States, Packard Truck Service Stations give owners highly skilled service at a reasonable cost. Packard Truck costs, always low because the sound Packard construction minimizes the need of repair, are held still lower by this expert, broadcast service.

Ask the man who owns one

One in every ten motor trucks of 2-ton capacity and over, in America, is a Packard Truck.

Realize fully, if you please, the degree of Packard preference which this high ratio indicates.

To grasp its significance completely you should know that there are 149 producers in the United States making trucks of from 2 to 2½-ton capacity, 109 making 3 to 4-ton trucks, and 75 making trucks of 5-ton capacity, or over.

This leadership of Packard is directly traceable to its superiority in the qualities which every truck-buyer earnestly seeks.

In other words, Packard has firmly established itself as a better-paying investment in dependability, performance and all-around economy—whether used singly or in fleet.

Packard Trucks range in capacity from 2 tons to 7½ tons; and in price from $3,100 to $4,500

In 682 cities and towns throughout the United States, Packard Truck Service Stations give owners highly skilled service at a reasonable cost. Packard Truck costs, always low because the sound Packard construction minimizes the need of repair, are held still lower by this expert, broadcast service.

Ask the man who owns one

It is perfectly plain that the Packard Truck never could have attained outstanding leadership were it not a sound, saving investment, from every viewpoint of truck operation.

The comparatively low purchase price of Packard Trucks—generally lower than prices of other trucks of comparable quality—adds great emphasis to Packard value.

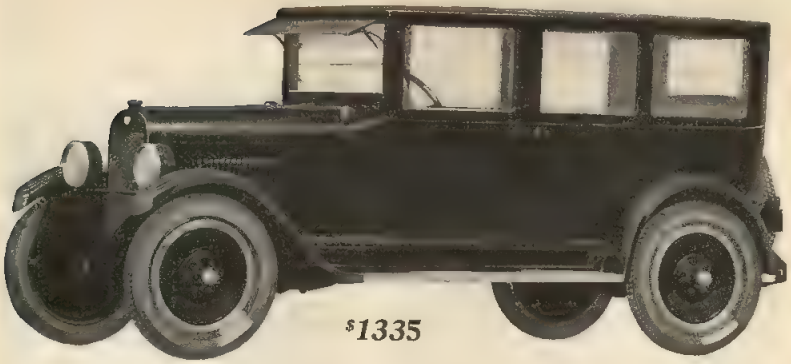
The seasoned and stable organization building the Packard Truck will continue to advance and fortify still further its leadership and its reputation for lower-cost haulage.

Packard Trucks range in capacity from 2 tons, to 7½ tons and in price from $3,100 to $4,500

Packard Service—In 585 cities and towns throughout the United States, Packard Truck Service Stations give owners highly skilled service at a reasonable cost. Packard Truck costs, always low because sound, Packard construction minimizes need of repair, are held still lower by this expert, broadcast service

PACKARD MOTOR CAR COMPANY, DETROIT

Ask the man who owns one



$1335

Outselling because it deserves to outsell—because tens of thousands of people pronounce it far-and-away the best closed car purchase in the world's market today.

The good Maxwell sedan is a car of roominess and comfort. Long tours are completed without tiresome effect. Large side windows, all of which can be lowered, and the broad rear light, offer clear vision in all directions. Double ventilating windshield gives complete control of ventilation. Upholstery is broadcloth. Hardware is the new satin-finish. The quality equipment anticipates the desires of the owner. A windshield visor carries off rain without splashing the windshield. Rear-view mirror, heater, parking lights, dome light, windshield wiper, Yale locks on doors, steel disc wheels, and non-skid cord tires all around, are included. Prices F. O. B. Detroit, revenue tax to be added. Sedan, $1335; Four Passenger Coupe, $1235; Club Coupe, $985; Touring, $885; Roadster, $885.

of the soul and with a maximum and abnormal development of bodily interests. It would seem that mothers are neglectful to an extreme degree of the modesty and virtuous grace of their daughters, which, after all, are the virtues which true men love and admire. Men are forced to look up to avoid unseemly display by the modern woman, and how she can avoid realizing this fact is a marvel in femininity.

Ignorance of their own natures, believes President A. Mackenzie Meldrum of Spokane University, is at the bottom of much of the trouble. He writes

Our young people do not know themselves, nor have they learned the sacred purpose of their being. One of the most alarming facts in the world to-day is man's ignorance of self. The home, the school, the press, the platform and the pulpit must unite in combating this noisome pestilence that is spreading a sable cloud of shame disease and death over every community in the land; sowing seeds of moral, mental, physical and spiritual degeneracy, to be reaped by our children in a harvest of national decay.

A CRITIC OF DRESS

"Too many of our young women are improperly clad," declares C. B. Riddle, the editor of *The Christian Sun*, official organ of the Southern Christian Convention

We are so anxious to teach the young of the nation the various branches of academic knowledge, rules of etiquette, and forms of good society, that plain talks to the boys and girls seem to be divorced from the family curriculum. This is a deplorable mistake, against which I inveigh and offer my most solemn protest; for I verily believe it is more important for our sons to know themselves, than to know Plato and Virgil: and it is more imperatively necessary for our daughters to know themselves than to know the histories of ancient Greece and Rome.

"Manners are superficially better and fundamentally worse," remarks President Harry Morehouse Gage of Coe College, Cedar Rapids, Ia. "There has been a pronounced moral sag. Things that are done now are in marked contrast to the vaulting moral enthusiasm of three or four years ago. Generally speaking, there is not enough restraint. Freedom is not balanced

The Touring Car

A New Ideal in Motor Car Value

A new ideal has come true—plainly and unmistakably. Oakland deliberately planned to make the New Oakland the finest light-weight six that advanced engineering, highest grade materials, and expert workmanship could build.

This is borne out in the rugged Oakland chassis; in the remarkable efficiency of Oakland's own overhead-valve six-cylinder engine; and in the many features which the New Oakland shares with much higher priced cars.

Crowning this splendid mechanism are the five new and distinctive Oakland bodies—of a beauty, comfort and fine equipment unequalled anywhere in their price range.

These things prove Oakland's leadership in light-weight six manufacture. Oakland is proving that leadership to an evergrowing number of Oakland owners by its reliable performance, backed by the 15,000 mile guarantee.

See this fine car! Test it thoroughly! Compare it with other cars! The New Oakland Six—the light-weight six of the General Motors group—is by far the finest and most desirable automobile in its price class.

The FRANKLIN SEDAN

AT THE NEW PRICE

$2850

THE finest Franklin in 20 years of quality manufacture—at the lowest price in its history, except for four months in 1916.

The first car of this type, suitable for all-round use, in America. Light, flexible and direct air-cooled—no radiator—it is more widely usable than any other car, enclosed or open. Cool in summer.

From its very beginning, the most popular enclosed car built, in proportion to total output. Last year Sedans formed 42½% of Franklin's entire production.

If you have never owned a Franklin Sedan, you do not yet know how much a car can do, how well it can do it, nor how little that service need cost.

* * *

Motorists' desire for better service made April, 1922, Franklin's biggest April. And as we go to press, still another record is broken. On May 1, over three times as many Franklins were delivered as in any previous day on record.

Touring Car $1950 Demi-Coupé $2100 Runabout $1900
Demi-Sedan $2250 Coupé $2750 Brougham $2750

The Perfect Heat for Small Homes

A good deal of money can be saved by installing Clow Gasteam radiation—the cost of excavating a cellar, building a chimney and coal bin.

Buy It on Easy Terms

The installation can be purchased on easy terms, [illegible] supervision, etc.

Your home will have real steam heat—admittedly the best—and the value of your property will be enhanced. But you will never have the nuisance of coal, with its ashes and dirt, and the necessity of tending a furnace.

The Healthful Heat

The heat will be healthful, with just the right amount of humidity. And you will find it economical, because you pay for fuel only as you use it.

Clow Gasteam radiation is successfully used for the heating of small homes as far north as northeastern New York. It is also used for other kinds of buildings—stores, offices, churches, schools, and so on.

Clow Gasteam, the modern heating system, furnishes steam heat without coal, using gas for fuel. Where other heating systems take moisture from the air, resulting in many forms of illness, Clow Gasteam adds moisture to the air.

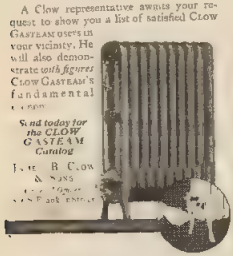
Self-Contained Units

Each radiator is a steam heating plant in itself—automatically regulated. And each radiator is complete in itself—you can use one or more as you desire.

A Clow representative awaits your request to show you a list of satisfied Clow Gasteam users in your vicinity. He will also demonstrate *with figures* Clow Gasteam's fundamental economy.

Send today for the CLOW GASTEAM Catalog

James B. Clow & Sons [illegible]



CLOW

Sales Offices Everywhere

withstood, and he gobbled it up, pausing a second in his chase. Another dog followed him out of the underbrush, finding the first piece of meat Brother had thrown.

It did not take long for the two hounds to finish off the raw meat and, as Brother tossed to them by the small boy almost hidden in a clump of tall ferns. And when it was gone, Leonard was safe, for the dogs, with the smell of fresh meat in their nostrils, had lost the lighter scent of the little deer's flying hoofs, and they sniffed shamefacedly and with befuddled yappings, until the hunters came racing down the hill and crashing out the open [illegible] berate the dogs soundly for having lost the game—as they supposed—in the woods.

They could not know that the little boy in the clump of ferns, looking on so innocently, was responsible for the hounds' failure, nor that their game was at the instant held tightly in the arms of a little girl who was sensing a full experiment as well as with fear and a [illegible] hurrying to pay the penalty of his rage.

But nothing else. The men stamped back into the woods, taking the hounds with them, and that day at least we heard no more baying on the hill.

The children were afraid to let Leonard go back to the woods until the deer season was over or until he was of a size better able to care for himself. A pen was contrived of wire netting with the brooder house as shelter for nights. There they kept Leonard a willing prisoner, while the hounds bayed on the hills and shots echoed across the water. In time they released the deer, first with a collar and a rope, and then with nothing to hold him. He followed the children like a dog, trotting beside them with dainty, mincing steps, and he soon learned his name, and would come bounding out to them when they called. They fed him things his ancestors probably never tasted—cookies, apples, lettuce leaves and candy gum. But best of all delicacies was chewing-gum. When it was first offered him, Leonard accepted it daintily, and chewed it, with an actual expression of surprise coming into his brown eyes. He chewed and chewed. Perhaps he thought it was a new variety of cud. At any rate, he gave it his hearty indorsement, and after that he would nose in Brother's pockets to find the stick of gum that was always there. Leonard seemed perfectly content to forget the ways of the woods for those of civilization until [illegible] s ons goes on

One night I woke to find Brother shaking me by the [illegible] He was whispering [illegible] the most thing was inside Leonard's pen. [illegible] perhaps it was a bear or a wildcat trying to get at him.

Foolish children we may have been, but we were not cowardly. It never occurred to us to rouse the grown-ups. Leonard was our friend and our responsibility. From my window the two of us crept out on the roof, white night-gowned figures, shaking with cold and excitement. From the roof we dropped [illegible] to the railing of the picket fence at the back of the cabin and from there to the ground.

CURRENT EVENTS
Continued

nambuco, Brazil, in completion of their transatlantic flight from Lisbon. Three planes were used in the flight, which was begun early in April.

June 6.—Dr. Sun Yat Sen, President of the Republic of South China, will refuse to resign to clear the way for General Wu Pei-Fu's plan to reunite China under one government, according to advices received from Canton.

DOMESTIC

May 31.—The Senate Finance Committee, by a vote of 9 to 4, orders the McCumber bonus bill reported to the Senate.

Investigation of the so-called war fraud cases begin before a special Federal grand jury in Washington, when allegations involving the disposal of surplus lumber are presented against the Quartermaster Corps of the United States Army.

June 1.—The House rules committee votes down by 7 to 4 the Woodruff-Johnson resolution to investigate alleged laxity in war fraud prosecution.

An organization to be known as "the permanent conference for the abolition of child labor" is formed in Washington by representatives of a number of national associations, with Samuel Gompers as permanent chairman.

June 2.—A race riot near Kirvin, Texas, results in the death of one white man and six negroes.

The annual Army appropriation bill fixing the size of the Army at an average of 12,000 officers and 125,000 men, and carrying an appropriation of $311,750,000 is passed by the Senate. The measure now goes to conference with the House.

June 3.—Secretary Hughes accepts for the Government of Great Britain's invitation to join with the British, French and Italian Governments in an investigation into alleged Turkish cruelties against Christians in Asia Minor.

June 4.—Boris Bakhmeteff, ambassador to this country for the Kerensky Government in Russia, extinct for five years, will end his relations with this Government on June 30. The work of the embassy will be carried on by an attaché of the staff.

June 5.—The Federal Trade Commission begins proceedings to test the legality of the proposed Bethlehem-Lackawanna steel merger.

The United States Supreme Court hands down a decision that labor organizations, generally, are liable to be sued and to judgment for damages in case of injury to property in the course of strikes, and that strike funds may be levied on to collect judgment.

Lillian Russell Moore dies at her home in Pittsburgh in her 62nd year.

June 6.—Officials of eleven railway unions, including the Railway Employees' Department of the American Federation of Labor, authorize a nation-wide strike vote, returnable on June 30. The strike will affect 1,200,000 men.

Wages of 400,000 railroad employees, including shopmen, freight-car men, helpers and car-cleaners, are cut, approximately $60,600,000, by the majority members of the United States Railroad Labor Board, the decisions bringing the total wage savings for the railroads to approximately $110,000,000.

DOMESTIC

April 26.—Continued reports of dead and missing in the flood that inundated Fort Worth, Texas, for two days brings the list to 63

April 27. President Harding delivers a memorial address at General U. S. Grant's birthplace at Point Pleasant, Ohio, and says that all nations are backing the disarmament movement.

Twenty-four nationally known lawyers file a report with Secretary of State Hughes denouncing the motives and methods of the State and Navy Departments in their treatment of Haiti

April 28. The House passes the Dennison blue-sky bill making it illegal to use United States mails and other agencies of interstate commerce for transporting and promoting the sale of securities contrary to the laws of the State

April 29. The Senate unanimously adopts the La Follette resolution calling for an investigation into the action of the Interior Department and the Navy Department in the leasing of the naval oil reserves in California and Wyoming

The Socialist party of the United States, in convention at Cleveland, votes for an immediate affiliation with the Vienna Internationale

Gifts by John D. Rockefeller for the advancement of education in the United States within the last twenty years are estimated by the President of the General Education Board to be $130,000,000

Secretary of State Hughes replies to the protest lodged against the United States Government in Haiti by announcing that the Government's policy will stand

Twenty-five moonshiners of the Mill Creek district in Kentucky agree to turn over a new leaf and to surrender their stills to Judge Hiram Johnson of the Circuit Court, and afterwards engage in prayer in the court-room.

April 30.—President Samuel Gompers, of the American Federation of Labor, issues a statement declaring that recognition by the United States of the Bolshevik government would be "a needless and base betrayal of civilization"

May 1.—A bill extending for one year from next July 1 the power of the War Finance Corporation is passed by the Senate by unanimous vote.

The House passes the Dun bill authorizing an appropriation of $65,000,000 for road-building for the year beginning July 1, and $75,000,000 for the year thereafter

Major-General James William McAndrew, Chief of Staff of the A. E. F. in France in the latter part of the World War, dies in his 60th year

May 2.—President Harding sends to the House a request for a special appropriation of $500,000 to be used by the Department of Justice to investigate and prosecute all civil and criminal cases growing out of the war

Two joint resolutions to legalize light wines and beer, and a bill providing, in effect, for submission of the same question to a referendum vote are introduced in the House by Representative Ansorge, of New York.

Collections of internal revenue for the first three-quarters of the current fiscal year fell off by more than $875,000,000 as compared with the corresponding period of last year, according to a report of the Internal Revenue Bureau.

THIRD OF NATIONAL SERIES

Friday Evening, May 19

CONN radio concerts have taken the nation by storm! Our programs of March 17 and April 14 by America's leading dance orchestras and nationally famed soloists have occasioned universal admiration for Conn enterprise.

Isham Jones, Joseph Smith, Frank Westphal, Hal Nichols, D. C. Rosebrook and their orchestras have already played; Benne Henton, Charles Randall, John Leick, Mable Keith Leick and Fred Tait have given solos. More of their calibre are to appear.

Travelers on shipboard 1500 miles from the Atlantic and Pacific coasts, people in Northern Canada and in Central America will enjoy the same music which will be heard throughout the United States May 19.

Think of it—Conn Ltd. is entertaining people by wireless a quarter of the way around the globe

May 19 programs will be broadcasted from:

New York, Station WJZ, San Francisco, Station KDN; Detroit, Station WWJ, Chicago, Station KYW; Pittsburgh, Station KDKA, New Orleans, Station WAAB, Denver, Station ZAF, Kansas City, Sweeney Station Seattle, Wash., Station KGB

Conn dealers are entertaining at radiophone concerts. Watch for local announcements.

Write to Conn Ltd. now for new saxophone book, FREE. Tells why the Conn is the world's finest, choice of the famous artists on the radio programs.

HE TOOK A PRIZE.

The portrait of this benign and aristocratic chimpanzee was awarded first prize for photographs of mammals in captivity, in the exhibition held by the American Museum of Natural History

the smallest stop, the surroundings are brought into focus. If the bird is wild, use a long rubber tube to operate the shutter lever, or attach a string to the same.

Hunting with a jack-light is illegal, because the animal has a poor chance for a safe getaway, as the light—first noticed out of curiosity—blinds him. Advantage is taken of this in flashlight photography.

THE LIVELY JOB OF SHIPPING WILD ANIMALS

THE king cobra had to be moved into a new box. He was a very wild snake and whenever his captor approached him, the cobra beat its head against the wires of the cage. As this cage was only a shallow box made of flimsy, decaying boards and covered with a wire netting, and as the snake was the largest cobra on record measuring twelve and a half feet, it seemed expedient, to put it mildly, to give him a better home before shipping him from Singapore to New York. So the animal dealer, Mr. Frank H. Buck, as he explains in *Asia* (New York), had a handsome box made of teakwood with a plate-glass top, and when this was delivered at Yew Kee's compound, where he was keeping the snake, the task of changing the cobra to his new quarters was undertaken Yew Kee and two of his Chinese assistants, and Beni Chee, Mr. Buck's Malay "boy," who were helping, were standing in the center of a narrow cement passageway that ended blind against a wall. On one side of the passageway were a number of wooden crates containing tigers; on the other side were some fish-tanks. One of the Chinese assistants picked up the old box, and just as he came to the center of the passageway, the rotten bottom fell out of the box and the snake was dumped on the floor. And then, says Mr. Buck:

Everybody lost his head. My "boy," who faces tigers intrepidly, jumped over

Of course it's a Corona!

No other typewriter can meet the hard requirements of the student

THOUSANDS of Coronas "graduated" from college last spring. Thousands more will enter college this fall.

The student who hasn't a typewriter is working under a handicap, and Corona is the one typewriter that combines all the needed qualities.

1 *Greater portability.* Corona weighs only 6½ pounds, and is not screwed to a board. Folded, in its neat case, it can travel around the world.

2 *Greater simplicity.* Corona has only half as many parts as other typewriters. Very easy to use, very hard to get out of order—two very important points for the free and easy life of the student.

3 *Greater durability.* Corona was the first practical portable typewriter, and it is the *only* one that has been tried and perfected over a period of years. Its war record speaks for itself.

4 *Special keyboards.* Engineering, chemical, medical, mathematical or foreign language keyboards, as well as a variety of sizes and styles of type. No extra charge.

Your local Corona dealer will be glad to show you Corona and to explain our easy payment plan. Write for our interesting booklet No. 5, and the address of the nearest Corona store.

CORONA

Fold it up-take it with you-typewrite anywhere

Above is an actual photograph of Corona number 27,035 purchased nine years ago by Mr Conklyn, whose statement appears below

Nine years service - 35¢ repairs

"CORONA has been my helper for nine years. This wonderful little typewriter has aided me in my business, increased my income, made school work easier for my children, been private secretary to my wife — and in nine years of the hardest kind of use has cost me exactly thirty-five cents for repairs!" — W. E. Conklyn, Yonkers, N. Y.

Mr. Conklyn's experience is not a bit unusual. Nearly half a million people have learned that Corona is the most willing, tireless private secretary in the world. And sixteen years of service has proved that it is the sturdiest and most trouble-proof of all typewriters, regardless of size or price.

Write for this free booklet

Read how Corona has helped other men and women to increase their output and incomes. With the booklet we will give you the address of the nearest dealer from whom you may purchase Corona on easy payments.

Corona weighs only 6½ pounds, folds and fits in a neat, compact carrying case no bigger than your hat, will do all the work you require of an old-fashioned "heavy" typewriter, and is far more durable.

THE CRAFT PIPE WRENCH

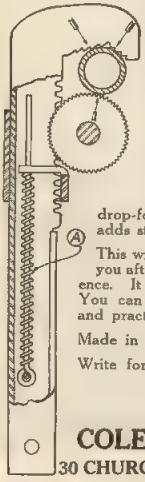
ALL GRIP NO SLIP

SELF ADJUSTING

PATENTED

THE Craft Self Adjusting Pipe Wrench is extremely practical, quick acting and is operated by one hand.

No pressure is necessary on the head to prevent slipping; both hands are always free for increased leverage. The Jaws (see diagram) make a three-point contact; pressure increases the grip. They give a twisting motion that will not crush the pipe. The movable jaw is pushed back by hand, a light spring in the handle (see diagram) slides this jaw forward.



The Craft has eight times the wearing surface of any other wrench. Each size of pipe is gripped by different teeth on the ratchet wheel. It is all-steel, with wearing parts drop-forged and has a tubular handle that adds strength and reduces weight.

This wrench is no experiment. It is offered to you after seven years' development and experience. It is the ideal Pipe Wrench for any job. You can stake your reputation on its quality and practicability. Guaranteed, of course.

Made in 6 sizes, 6" to 24".

Write for circular and Price List.

30 CHURCH ST. NEW YORK

sleeping-car services to the Carisso Gorge and to the Apache Trail provide connections with the Southern Pacific New York-New Orleans steamship line, the steamers of which leave New York on Saturdays and arrive at New Orleans early in the morning of the following Friday, leaving New Orleans for New York every Wednesday, arriving New York on the morning of the following Monday.

UNDER THE SUNNY SKIES OF CALIFORNIA

Resembling in many ways its European prototype, the southern coast of California may be termed appropriately the great American Riviera. Yet this thin strip of shore line is only one part of the Golden State's winter attractions. Back of the ocean resorts are fertile valleys, sunny hillsides and the nature wonders of the Sierras. Pioneers came to California to dig its precious ores. Subsequent generations in ever-increasing numbers come hither to extract California's permanent riches of health, rest and recreation. Countless thousands of these pilgrims never return, for California holds them happy and contented in her enduring embrace. All degrees of climate are available. One authority has likened the winter of Southern California to the Indian Summer of the East. While golden citrus fruit ripen in the southern valleys, in the northern and eastern mountain regions the snow belt is attainable.

Arriving in California at San Diego or Los Angeles, favorite winter gateways, having come through the Carisso Gorge or the Cajon Pass, we are at the southern boundary of a recreation region stretching far northward to San Francisco.

San Diego embraces two cities in one, the "Old Town," founded by the Spanish in 1769, and the crumbling remains of the first of the Missions founded by Father Serra in 1769 may be visited. San Diego has many other points of interest, including that landscape gem, Balboa Park, Mission Cliff Gardens and sight-seeing excursions to Point Loma, the outlook from which Charles Dudley Warner described "as one of the most remarkable views in the accessible civilized world, one of the three or four really great prospects which the traveler can recall, astonishing in its immensity, interesting in its peculiar details." At Point Loma is the Cabrillo National Monument commemorating the discoverer, Juan Rodriguez Cabrillo.

Across the Bay is gay Coronado with its garden-surrounded homes, imposing hotel and ample bathing-beach.

Traveling over the northward boulevard from San Diego we come to that most famous tourist center of Southern California. "It is Los Angeles," says Charles Francis Saunders in "Finding the Worth While in California" (Robert McBride), "to which all roads lead south at Tehachapi (mountain range separating Central California)—and the base from which the tourist in Southern California can most readily set forth to see what he came for. The city possesses the usual assortment of palatial residences, beautiful parks, flowery private grounds, and public institutions of all kinds, common to American municipalities of metropolitan pretensions, and in addition the especial tinge that rose-embowered bungalows, rustling palms and an ostrich farm or two communicate. Personally, I have found the neighborhood of the Old Plaza a fascinating loitering-ground for spare half-hours, with its shifting and picturesque Mexican street life; the shops with their stocks of queer Mexican edibles, Guadalajara pottery and cholo hats; the restaurants often with a Spanish name. . . . Among the pleasant anticipations of most Easterners visiting the Coast for the first time is a sight of the Pacific Ocean. The heart of Los Angeles is a bare twenty miles from it and electric cars and jitneys a-plenty will carry you in three-quarters of an hour to any one of six or eight beach resorts, where even in mid-winter you may take a surf bath. . . . All

Help Your Boy Grow

Different Daisy models range in price from $1.00 to $5.00, and in size to suit the younger as well as the older boy. Ask any hardware or sporting goods dealer

When your boy asks for an air rifle remember that it is the strong, upstanding American man in him asking for a chance to grow.

Millions of clean-cut, alert American boys, now grown, had their first training in manly sport with a Daisy Air Rifle. Mothers, as well as fathers, now generally recognize that this training makes for character and cleanliness. Give your boy a chance to develop character while he's having the time of his life in harmless fun.

CHAMPION
of the Northwest

Arthur Lundberg

Lundberg's wonderful victory over a big field, at Portland, Oregon, where he captured both the Northwest and Oregon State championship scalps, was won with a Dayton — the fastest, sturdiest and most dependable bicycle on the market.

The story of Arthur's success is interesting—it's a story of rider and bicycle leadership.

That the bicycle of his selection should have been a Dayton is only natural.

And there are some important reasons why *you* should own and ride a Dayton.

MOTORING AND AVIATION
Continued

of directional wireless, used for some time to guide airships through fog or darkness. In the case of the guide cable invention:

The effects of the magnetic field can be detected by means of suitable instruments at considerable distances from the cable. Thus if an aircraft is equipped with these instruments, its navigator can determine his position relative to the cable, and thus ascertain his bearings.

Altho the principles are very simple, M. Loth was faced with numerous problems before bringing his system to perfection. Thus he had to do a tremendous amount of research and experimental work in connection with the formation and extent of the magnetic field surrounding the cable. This work took a long time, as measurements were often taken at intervals of a meter or so. The lines of force, shown in the accompanying diagram, were found to vary with the frequency of the alternating current sent through the cable. The lines

By courtesy of "Aviation," New York

FIG. 3. Installation required on an airplane using the Loth guide cable

shown in Fig. 1 represent the field resulting from using a frequency of 600 per second.

As regards the equipment of the airplane, this is simple in principle, consisting in mounting in a suitable place—for instance, on the tail of the machine three panels of insulated copper wire, so placed as to be at right angles to each other, as shown in Fig. 2, where 1 is the longitudinal vertical panel, 2 the lateral horizontal panel, and 3 the lateral vertical panel. These panels are connected to a telephone receiver, as in ordinary direction-finding wireless, via a commutator, so that the navigator can listen in on either of the three panels.

According to the position of the machine in relation to the cable, the intensity in each of the three panels varies or may even disappear. For instance, when the machine is flying parallel to the cable, the sound is a maximum in the longitudinal panel 1, and nil in the transverse vertical panel 3. As the machine diverges from the course parallel to the cable, the sound diminishes in the longitudinal panel, and increases in the lateral vertical panel, in which the sound becomes maximum when the machine is at right angles to the cable. The sound in the longitudinal panels then vanishes. The horizontal panel has the property that the sound in it vanishes when the machine is vertically above the cable.

It will thus be seen that if an airdrome has a cable running around it, the navigator of a machine can determine, even in a thick fog, the exact moment of crossing the cable, and by finding the height from the altimeter he can determine at what angle to

Why worry about baggage?

The theft or destruction of your baggage may mar the pleasure of your trip, especially if you must bear the burden of the loss financially.

The Insurance Company of North America issues a Tourist Baggage Policy that protects your baggage against practically all the perils of transportation and is worth many times the cost in the worry it saves.

If you travel at all, it will pay you to fill out the attached memorandum and mail it to us at once.

A Success for 15 Years

against dishonest advertising, and has accomplished a great deal of good against this type of propaganda.

But, unfortunately, many undesirable propaganda will not fall under the class of propaganda publicly making dishonest statements. One very undesirable sort is spread by word of mouth. No one knows from whence it comes, and exactly what is back of it. Such word of mouth propaganda is fostered in times of emotional stress and particularly wherever people believe they are not being told all the facts. The best possible cure for it is publicity of the sort that makes people *believe* they are getting all sides to the question.

But in addition to this sneaking underhand propaganda there are all sorts of campaigns which are very undesirable, but which adhere technically to the truth. They can not accordingly be prosecuted for dishonesty. Some of them, however, give false impressions just the same. For a distributor of a food product to advertise that his goods contain no arsenic is to give the impression that the goods of at least one of his competitors do contain that poison.

Then there are other kinds of propaganda which deal with this subject in such a general way that no one can challenge their statement.

To require that propaganda contain truths and not falsehoods is a desirable regulation, but it will not stop undesirable campaigns.

Let us consider, second, to what extent propaganda can be controlled in terms of the action which is proposed.

If the proposed action is that of buying, it is not difficult to evaluate the propaganda. But if the proposed action is that of giving money for some cause or charity, justification upon such grounds is far more difficult. Business men through their Chambers of Commerce in sheer defense are increasingly investigating such propositions, and in many places list the charities that they will countenance.

The establishment of bureaus whose business it is to investigate all organizations asking for funds renders it easier to determine whether any organization is desirable or not. Can society go farther here? Can society not only positively help worthy cause, but put the unworthy, inefficient or unnecessarily duplicating agency out of business? There is no question but that many individuals are being fooled every year and much money squandered through such non-worth-while causes. But at the same time, we must remember that most new uplift movements have encountered great opposition at the start, and to increase this opposition still more through the establishment of legal regulations may do society in the long run more harm than good.

But there is an entirely different type of response which some propaganda aims to accomplish. It is that where no definite act is suggested, but where public opinion is to be changed. To evaluate the propaganda in such cases, the entire program must be considered. And as individual members of a big movement emphasize different aspects it is very difficult to determine just what the movement stands for.

There is another very vexatious phase of this point. Can a propagandist be held responsible for the actions of his followers because he stirred them up originally? Shall propaganda be evaluated only on the basis of the actions that result or on the basis of the motives back of the propaganda?

Our law basically concerns itself with

The Welcome Wedding Gift

Brings Joy to Brides—and Others, Too

ANY WOMAN will prize the Duplex-Alcazar—the wonderful three-fuel range. Because—it gives such marvelous results in cookery, saves work and cuts down expense.

The Duplex-Alcazar burns gas and coal or wood, singly or together. The change from fuel to fuel or to combination is done in an instant and the heat can be instantly adjusted exactly to the degree desired.

It's just like having two ranges—but you purchase only one.

Then think of the comfort of having gas to cook with in hot weather and coal or wood in cold weather. A cool or a warm kitchen just as you wish.

The Duplex-Alcazar is made in various types and styles. Take your choice. Sold by best dealers everywhere. Ask your dealer or write to us for Booklet.

For districts where there is no gas, we furnish an Oil Duplex-Alcazar which burns kerosene oil and coal or wood.

"You're Next!"

Increasing thousands of Ford owners drive up for Veedol Fordol

Four months ago Veedol Fordol was unknown. Today it is an established success—the outstanding lubrication achievement of the year.

This new Ford oil was created by Tide Water engineers after four years of exhaustive experiment to solve the unique and complex lubricating problem presented by the Ford engine and planetary transmission system.

Science perfected Veedol Fordol. Actual use by large corporations, municipal and government departments and by hundreds of thousands of Ford owners has *proven* Veedol Fordol

—the true economy oil for the Ford automobile

—the oil that absolutely eliminates chatter

—the oil that permits the Ford to start, stop and coast with the smooth ease of higher priced cars.

You're next! Go to any dealer who displays the orange and black Veedol sign. Drive up, fill up and take home your first 5 gallon can of this new economy oil for your Ford car.

The 8 Economies of Veedol Fordol

1—10 to 25% saving in gasoline. Hundreds of tests have demonstrated that Veedol Fordol conservatively saves 10% on gasoline consumption, 25% to 33⅓ savings have been developed repeatedly.

2—Eliminates costly "chatter". Veedol Fordol lengthens the life of Ford brake and transmission bands by properly lubricating them. "Chatter" a result of faulty lubricants, is *entirely eliminated*

3—10 to 25% saving in oil. The savings in oil consumption run from 10% to 25%. The exact savings depend upon the mechanical condition of the engine and the lubricant formerly used.

4—10 to 25% less carbon. Veedol Fordol forms on an average from 10% to 25% less carbon in the Ford engine cylinders. The exact savings depend on the mechanical condition of the engine and the lubricant formerly used. Less carbon means more power with fewer repairs.

5—Resists heat and friction. Veedol Fordol possesses to a super-degree the famous characteristic of all Veedol oils to resist heat and friction.

6—Increased ability to coast. With average lubrication a Ford will only coast down steep hills. With Veedol Fordol coasting is possible down the slightest grade.

7—Resists fuel dilution. Even with poor fuel Veedol Fordol maintains its power-test and lubricating value longer than other oils. Result—more miles per gallon of gas and per quart of Fordol

8 Fewer Repairs. Because Veedol Fordol masters the lubricating problems of the Ford power plant the result is a hitherto unknown freedom from engine vibration and repair bills.

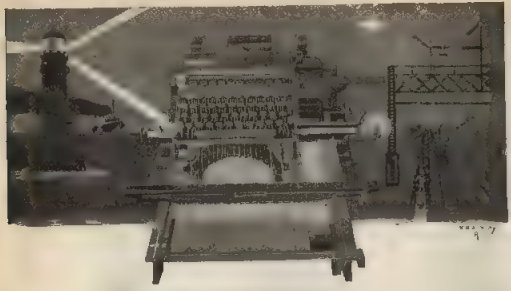
The new economy oil for Fords



Mechanical Accuracy

Assurance of safety demands mechanical precision.

Although the human element is liable to err, the devices of safety that man has perfected are not.

The Security against costly errors in bookkeeping, that Elliott-Fisher renders, may be compared with that of the Block System to the engineer, and the Beacon to the mariner.

Daily, visual proof of every entry the operator makes is furnished by Elliott-Fisher.

You can scarcely estimate the saving in time, labor and expense resulting from the knowledge that your records are in perpetual balance—completely written and mechanically proven.

Call in our representative in your city and ask him to show you how Elliott-Fisher produces more accounting information, better records, faster, at less cost, and with absolute mechanical accuracy.

The Elliott-Fisher representative will gladly help analyze your accounting problems and, without placing you under any obligation, make a written report of what Elliott-Fisher can do for you.

PERSONAL GLIMPSES
Continued

the coming winter." A Paris cable to the New York *Times* says that "in Moscow the fact is no longer concealed that the populations of the cities will have an even harder life this winter than last"; and Walter Duranty, *The Times* correspondent, wired from Moscow on October 14: "Five million persons will face death by starvation from December until the next harvest, and two or three million more from March. That is the aftermath of last year's crop failure, and in certain areas this year's failure also." Paxton Hibben, secretary of the American Committee for Relief of Russian Children, who has just returned from an extensive investigation of crop conditions in the famine area, declares that land which should have produced 40 to 45 bushels to the acre has averaged only 3 bushels, while the acreage sown is only 10 per cent. of the 1914 acreage and but 66 per cent. of the 1921 acreage. He quotes field-workers of the Quakers, the Nansen Committee and the Dutch and Swedish Red Cross societies as predicting that the approaching winter will be worse than last winter, especially for the children, of whom there are some 600,000 famine orphans in Russia and 400,000 in the Ukraine.

Meanwhile, Leo Kamenev, head of the All-Russian Central Famine Relief Committee, reports that floods in the northwest of Russia (Petrograd, Tver, Pskov, Novgorod, Smolensk, Olonets and the Karelian Republic) have left 965,000 souls without food, while crop shortages in the Volga and Ural famine areas leave 4,137,000 who will have to be fed elsewhere, a total of 5,102,000 requiring relief, exclusive of the famine orphans. He says:

It should be borne in mind that the population of the above districts were in the clutches of famine in 1921 and were in starving condition in 1920, as well. As a result, they have now exhausted all their food and economic resources. The poultry and smaller live stock have been eaten by the population during the recent hunger years. A large proportion of the cattle, including both horses and milch cows, have also been slaughtered.

The Correct Procedure.—William Doublex is noted for his nerve, his shortness of temper, and his scarcity of cash. While he was seated at a lonely breakfast in his club one morning, a debt collector broke in, through the drowsiness of the porter at the door, and presented his bill.

"Sir," said William, glaring at him, "is this all you know of the usages of decent society? To present a bill to a man breakfasting, sir? Do you know that you are an intruder in this club, sir? Do you know I could call the servants and have you thrown out? If you wish to talk business, go outside and send in your card."

The collector went out and sent in his card. William picked it up between thumb and forefinger, adjusted his monocle, and read it.

"Tell the gentleman," he said, sweetly, "that I'm not in."—*Tit-Bits.*

The Powerful Ad.—POLICE OFFICER (to actress)—"So you got your pearls back, miss?"

FLOSSIE FOOTLIGHTS—"Yes; isn't advertising wonderful—here they are, *real* ones: my pearls were merely imitation."—*London Opinion.*

THE LEXICOGRAPHER'S EASY CHAIR

To decide questions concerning the correct use of words for this column, he Funk & Wagnalls New Standard Dictionary is consulted as arbiter

Readers will please bear in mind that no notice will be taken of anonymous communications.

"O. C. B," Columbus, Ind.—"The argument was put forth that the title *D. D* was primarily an honorary title. I made the claim that it is a title earned following the completion of courses in theology at our universities, as is the title *M. D* in medicine and *D. D. S* in dentistry, but that it may be and many times is an honorary title. Can you help us?"

The information you ask for is contained in the following —"*Degrees in the United States*'—At the present time there is a regrettable lack of uniformity throughout the whole system of degrees granted by institutions of learning in the United States. . . . *Not only those degrees which are properly honorary such as the D. D. and LL. D.*, are often bestowed by smaller colleges upon insufficient grounds, but other degrees which should regularly be won only by a definite course of study are conferred as honorary degrees, such as the Ph. D., the M. A., and even the bachelor's degree."—*The New International Encyclopedia* vol. 6, p 614

"L. B., Baltimore, Md.—"How do you pronounce the final letter of the English alphabet"

The final letter of the English alphabet is pronounced *zee* in the United States, altho *zed* may be heard occasionally. In Great Britain however *zed* is the prevailing form, and *zee* is seldom if ever, heard

"W. R. R.," New York, N. Y.—"Please give me the meaning and pronunciation of the word *rotisserie*."

This word means: "1. A restaurant where patrons select uncooked food and have it roasted and served. 2. A cook-shop where one may have food roasted for home consumption." The word is pronounced *ro"tis"se-ri'—o* as in *go*, *i's* as in *police*, *e* as in *mystery*

"G. E. F.," Louisville, Ky.—"What do the letters *S. D. V.* and *C. S. Sp* stand for?"

S. D. V. (or *S. V. D.*) stands for "Societas Divina Verbi" (Fathers of the Divine Word) *C. S. Sp* stands for "Congregatio Sancti Spiritus Fathers of the Holy Ghost)

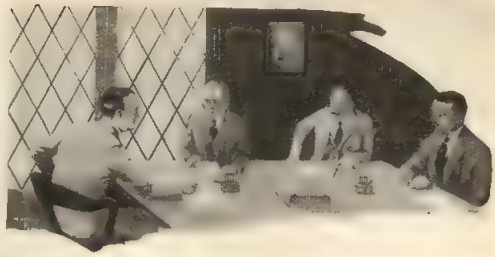
"G. L.," Los Gatos, Calif.—"In a recent article the words 'American' and 'Canadian' were used to distinguish the country lying north of the boundary line from its neighbor on the south. But is this correct? America is the name of a continent, not of a country. A Canadian a Mexican, a Brazilian, a Chilean are as American as the citizen of these United States. No one ever tries to establish a distinction between a European and a German, an Asiatic and a Burmese, or between an African and a Zulu. Why is the attempt made here? If, as has been said, the only true American is the North American Indian, the Mexicans deserve as much more than we to be so called as 75 per cent or more of Cuban attraction is traceable to the Carib and Spanish cultures of this country are generally divided and called Yankee, a term eminently instructive establishing a race the fact that does not measure to the Stars and Stripes. Any reasonable explanation you can give me among the above would be appreciated."

The answer is to be found in the seed sown on the Western hemisphere by the English people.

Frobisher's *Voyages* by Best, issued in 1578, referred to "the *Americans* which dwell under the equinoctial line." Massinger in 1632 in his play, "The City Madam," act iii, scene 3, referred to "ignorant *Americans*." Addison in "The Spectator No. 56, 1711, announced that "the *Americans* believe that all creatures have souls"—a truly wonderful discovery. Herbert, in 1633, in his "Church Militant," wrote "Religion stands on tiptoe in our land, ready to pass to the *American* strand.

The term *American* designates: "1. An aboriginal of the American continent, now commonly called an American Indian. 2. A native of America of European descent, specifically, a citizen of the United States."

The term *Canada*, originally spelled *Cenaaday*, did not come into the language before 1624. See Captain John Smith's 'Virginia,' chapter 6, page 205. "I had called it New England, yet so long he (Thomas Hunt) and his consorts drowned that name with the echo of *Cannaday*." You will not find the word *Canadian* before 1805



When the Committee Meets!

When the Committee meets—when issues of great moment have to be discussed and decided—the facts must be real and indisputable.

The facts developed from the figures secured by Elliott-Fisher *are* indisputable because they are produced with mechanical precision and proven at the time each entry is made. This proof is secured without the expenditure of any extra time or effort.

Elliott-Fisher will absorb more of your accounting routine and give you better results in shorter time and at less cost than you can secure in any other way. There is a Flat Writing Elliott-Fisher Machine that will meet your particular requirements whether they be large or small; simple or complex; whether you desire to write on Cut or Continuous Forms, Loose Records or Bound Books.

There is an Elliott-Fisher representative near you who will be glad to discuss your problems and offer you the benefit of his experience. This is but a part of the Elliott-Fisher Idea of service, and it does not obligate you in any way.

Get in touch with him today; tomorrow never comes!

The ELLIOTT-FISHER IDEA

To build a machine that best meets all the requirements of Modern Accounting by furnishing:

PROOF OF ACCURACY
At time of writing—no other operation necessary.

MAXIMUM PRODUCTION
Writing the greatest number of records at one operation, on a FLAT WRITING SURFACE.

PERMANENT LEGIBILITY
Clearly written original and carbon copies.

COMPLETE DETAILS
Descriptions, as well as figures.

CURRENT INFORMATION
Promptly available.

A Quarter Century of study and research has been spent in developing THE UNIVERSAL AC COUNTING MACHINE -ELLIOTT-FISHER

Compare

TRUST your own judgment in tire buying, if your judgment is based on facts.

The one sure way to know tire values is thru investigation.

Look first for bigness, for strength, for resiliency—then for price.

Fisk Tires face any comparison and show their extra value.

There's a Fisk Tire of extra value in every size for car, truck or speed wagon

30 x 3	Fisk Premier Tread	$ 6.85
30 x 3	Non-Skid Fabric	14.85
29 x 3	Extra-Ply Red-Tire	17.85
30 x 3½	Six-Ply Non-Skid Cleincher Cord	17.85
30 x 3	Six-Ply Non-Skid Cord Straight Side	19.65
31 x 4	Six-Ply Non-Skid Cord	27.90
32 x 4	Non-Skid Cord	30.30
32 x 4	Non-Skid Cord	29.60
34 x 4½	Non-Skid Cord	41.60
35 x 5	Non-Skid Cord	51.80

FISK TIRES

AT present prices, Fisk Tires are indisputably the finest value a fine tire ever presented.
Bigger, stronger, more resilient, they make the miles cost less, with an assurance of uninterrupted service which is really beyond price.

There's a Fisk Tire of extra value in every size for car, truck or speed wagon

Learn a New Language Know a New World

Read, write, and converse in French, Spanish, German, or Italian, and you enter a new world of business personal and social delights, benefits and opportunity.

Sparkling French novels, vivid, thrilling Spanish and Italian masterpieces—all are literally [illegible] to you only when you read them in the [illegible] author, for their full charm and subtlety of expression cannot be translated

Ever [illegible] press America are turned to foreign markets. Our export and import firms MUST have representatives, correspondents, office-workers of all types, who know the language of the people with whom they are dealing or are to deal. Whatever your interest in these rapidly expanding factors of trade may be, whether owner or employee, opportunities galore for personal profit are open to you.

The prestige which the knowledge of French, Spanish, German, or Italian carries with it in social circles is too well-known to require comment

When you visit the great battlefields of Belgium, France or Italy—when you journey to Cuba or South America—complete enjoyment of the trip and the full benefits of it are immeasurably impaired unless you understand and speak the language of the land.

Look and Listen At Your Leisure

Thousands have quickly and easily learned French, Spanish, German and Italian by the remarkable Language Phone Method with Rosenthal's Practical Linguistry

YOU CAN TOO. A few moments a day for a few weeks and a new language is yours!

The Language Phone Method is simplicity itself. You learn at your leisure, in the comfort of your own home. Merely put a Rosenthal Language Phone Record on your phonograph (any make) and listen. You hear the cultured voice of a native professor. His pronunciation and enunciation are perfect. He speaks of every-day matters—asks and answers every-day questions.

As you listen, you read aloud from the book the [illegible] phrases you hear spoken. Thus from the very [illegible]ginning, you speak and understand the language [illegible] take up. Soon you associate the words and sentences with the actual things they describe and you *think* in your new language.

No rules to learn, no distant classroom to go to, no waiting teacher to consider, yet the Language Phone Method assures you of perfect accent and grammar in a few weeks!

Language Phone Method

With Rosenthal's Practical Linguistry

The Rosenthal Method has been praised, endorsed and used by teachers of languages in such famous Universities as Columbia, Harvard, Yale, Princeton, Cornell, Johns Hopkins, New York, Boston, [illegible] of Pennsylvania, Michigan, Brown, Stevens Institute of Technology, College of St. Francis Xavier, St. Joseph's Seminary.

Whatever your experience with other methods of learning a language, do not fail to investigate this which so simply, quickly, and forcefully gives you mastery of French, Spanish, German and Italian

FREE A 64-PAGE BOOK That Tells You

How to Increase Your Income, through a knowledge of a foreign language, whether you are an employee, young or old, a professional man or woman, a practitioner of any of the arts or sciences—whoever, whatever, and wherever you are. How to Acquire Conversational Fluency in a Foreign Tongue Quickly and devote only ten minutes, three times a day, to study. How familiarity with even one foreign language Increases Your Prestige—in the drawing-room, the club, the office; Widens Your Circle of Acquaintances—social and commercial. Multiplies the Pleasures of Travel and Reading; Broadens Your Intellectual Horizon.

City State

"J. O. C." Lake Beulah, Wis.—"(1) Can you give me a brief statement of the Pilgrim Fathers who sailed in the *Mayflower* in 1620 supplying the names of the families? (2) In one of Emerson's essays I find the word *villeggiatura* which I am unable to find in my dictionaries. Please give the meaning."

(1) In 1620 the *Mayflower*, a ship of 180 tons sailed from Plymouth, England, with 101 Puritans on board. The object of these pioneers was to found a colony in northern Virginia but adverse winds drove them out of their course to Cape Cod (Provincetown) Harbor, where they dropped anchor

Before landing forty-one members of this expedition subscribed their names, each noting the number of his family, on behalf of themselves and of their families, to the following Compact The names are given in the order of signing

Compact of the Pilgrims

(Signed on board the *Mayflower* in Cape Cod [Provincetown] Harbor before landing.)

"In ye name of God. Amen. We whose names are underwritten, the loyall subjects of our dread soveraigne Lord, King James, by ye Grace of God, of Great Britaine, France & Ireland King, Defender of ye Faith, etc. Having undertaken for ye Glorie of God, and advancemente of ye Christian Faith and Honour of our King and countrie, a Voyage to plant ye first Colonie in ye Northerne part of Virginia, doe by these presents solemnly and mutually in ye Presence of God, and of one another, Covenant & Combine ourselves together into a Civill body Politick, for our better Ordering and Preservation & Furtherance of ye ends aforesaid; and by Vertue hearof to enact, constitute, and frame such just and equall lawes, ordinances, Acts, Constitutions & Offices, from Time to Time, as shall be thought most meete & convenient for ye generall good of ye Colonie, unto which we promise all due submission and obedience.

"In witnes whereof we have hereunder subscribed our Names at Cap. Codd ye 11 of November, in ye year of ye Raigne of our Soveraigne Lord King James, of England, France & Ireland ye Eighteenth, and of Scotland ye fiftie fourth Anno Dom. 1620."

(2) You will find the word *villeggiatura* defined in the New Standard Dictionary (p. 2553) It is an Italian word and means "a sojourn in the country or at a country villa."

"T. S.," Toronto, Ont., Can.—"Can you give me the meaning of the word *carnapticus*, as, 'a *carnapticus* teacher'? I can't find the word in the dictionary."

Carnapticus is a Scotticism and Hibernianism sometimes written *curnapticus*, and means "irritable, ill-tempered, quarrelsome." The word may be derived from *car*, a bitter or sad expression of the face, or *carb*, cavilling, carping, dissatisfaction, and *knapticus*, captious, quarrelsome, or *knappish*, snappish, snarling, spiteful.

"P. H. R.," Chehalis, Wash.—"Can you tell me how the phrase 'sowing one's wild oats' originated?"

The Lexicographer can not state definitely with whom this term originated, but he has been able to trace the phrase as far back as 1576 in English literature, since which time it may be met with frequently. The meaning of the phrase is to commit youthful follies or excesses, or to spend one's early life in dissipation, usually with the implication of subsequent reform. The allusion is, of course, to the folly of sowing wild oats, which are of no value, instead of good grain that will bring in a harvest of worth.

You give all outdoors when you give a *Flexible Flyer*

You provide an opportunity for children to develop strong, vigorous, sturdy bodies by giving them a Flexible Flyer for Christmas.

Whizzing down snow-packed hills on a Flexible Flyer, "the sled that steers," puts a sparkle in their eyes and the bloom of health on their cheeks.

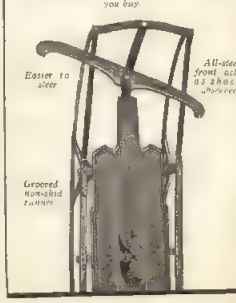
It's the sled every boy and girl wants and insists on having. It is the original steering sled—the speediest, strongest sled made. Built like an airplane, sturdy yet light in weight—with all-steel runners and a new steel front which takes up shock.

Thrill your boy or girl with a Flexible Flyer this Christmas.

S. L. Allen & Co., Inc.
Box 19 Philadelphia

Ask your dealer or department store for a free cardboard model showing how the Flexible Flyer steers—or write us for it.

Insist on seeing this trademark on the sled you buy



sioner met us and proffered the hospitality of a native bungalow a couple of miles from the machine. Here we aroused intense interest, eyes taking little furtive glimpses at us peered through every crack and gap.

During the night we were awakened to hear some fellow prowling about outside. I waited until he was opposite the doorway, then a shot from my Very light pistol put him to a screaming and, I have no doubt, a terror-stricken flight.

The natives had recovered from their shyness by next morning, and on our arrival were swarming around the machine with presents of cocoanuts sufficient to start a plantation; evidently they thought the *Vimy* a very thirsty sort of bird.

We took a cargo of nuts on board, as the water was unsuited for drinking, and, setting off in dazzling sunshine, once more pursued our course above scenes of tropical enchantment and alluring charm.

After following the north coast of Flores to Reo, we crossed over to the south side of the island and ran into isolated rainstorms. Once we saw a small active volcano in the distance and were tempted to go off and gaze down into its smoking crater, but as the weather indicated a change for the worse, we could not afford to make a deviation. We flew on as far as Pandar, and then swung off direct for Timor.

We had by this time acquired such confidence in our engines that it mattered little what lay below us—sea or land.

A thick haze soon obscured the land and all distant vision, but we eventually picked up the Timor coast a few hundred yards from our calculated position. Ten miles inland we came down in the aerodrome at Atamboea, our last landing-ground before Port Darwin.

The Dutch officials had thoughtfully arranged our petrol and oil supply close at hand, saving us a good deal of valuable time, which we were able to devote to a thorough overhaul.

To-morrow would be the great day whereupon reposed the destiny of our hopes, labors and ideals.

This was one of the aerodromes specially made by the Governor-General of the Netherlands Indies for the Australian flight, and had been completed only the day before our arrival. A guard of Dutch soldiers kept watch over the machine while we proceeded with their officers to camp, some six miles away.

It is hardly necessary to say that none of us overslept. We were too excited at the prospect of the morrow. We felt sure that if it dawned fine and hot, our homing was assured; but as we crept out, before sunrise, into the still, sluggish air, we realized that our hopes of an early start were small. A heavy haze lay over the sea and the coast, obscuring everything; so we decided to await its clearing.

We were at the aerodrome before sun-up to discover that a great swarm of natives were even earlier risers than ourselves. Most had come afoot, but many had ridden their ponies, and they clustered on and around the fence, behind and beside the *Vimy*, like swarming bees. We had hauled the machine well back with the tail against the fence in order to take advantage of every foot of the short run.

Our start-off was brightened by one of those incidents that usually make material for comic papers. The propellers were just "kicking" over, like two great fans, and those natives sitting on the fence in the line of the slip-stream were enjoying the cool breeze and looking pleased with themselves. When I opened up the engines and

THE LEXICOGRAPHER'S EASY CHAIR

In this column to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as referee

Readers will please bear in mind that no notice will be taken of anonymous communications.

"A. W. T., Brooke Va.— Please decide the following: A claims that the name of the daughter of Herodias, who asked of Herod that the head of John the Baptist be given her in a charger, was Salome. 'B' denies that her name was Salome, declaring there is nothing in the Scriptures to support A's claim."

Salome was the daughter of Herod Antipas and Herodias, but the name of Salome does not occur in connection with the incident referred to above in *Matthew* or *Mark* where it is told.

"H. R. C., Fargo, N. D.— "Kindly inform me the meaning of 'Victor mortalis est.' This presumably is a slogan from an old English coat of arms."

The phrase means "the victor is subject to death" or "the Conqueror is mortal."

"J. A. K., Charlotte, N. C.— "What is the meaning of the term 'pussy-foot'?"

The word means "to tread softly and stealthily so as to conceal one's plans or movements."

"B. B. B., Pensacola, Fla.— "Kindly give me the correct pronunciation of the word *boreas* as appears in the 2nd epode of Pindar's Pythionic *Tor'its*—o as in or, i as in *habit*.

"S. D. L., San Francisco, Cal.—"Can you trace the origin of the expression, 'A Philadelphia Lawyer,' and when and how it came to be used?"

The phrase *Philadelphia Lawyer* means an unusually sharp lawyer. The title was originally bestowed by grateful British sailors upon some members of the bar of Philadelphia who had rescued them from certain difficulties.

"J. S., Brooklyn, N. Y.— "Is it proper to say 'I will have to *light* a fire' or 'I will have to *light* up' on a cold morning? Should it be, 'They *lighted* the fire' or 'They *lit* the fire'? Which is considered better form?"

Both forms are recognized as in use, but the form *lighted* is given preference. Therefore, 'They *lighted* the oil-stove' is better than 'They *lit* the oil-stove."

"B. L. B., Wabash, Ind.—"Is it ever correct to use the word *avocation* for *vocation*?"

An *avocation* is that which takes one from his regular calling. It is a minor or irregular occupation; a diversion. The term is used loosely sometimes by good writers for *vocation*, which signifies one's main calling or business in life.

"A. M., Grinnell, Ia.—"The Greek letter *ph*, as pronounced in *philosophy*, is"

"L. K., Santa Ana, Cal.—"Kindly give me the pronunciation of the word *opuscule*."

The word *opuscule* means "a small or unimportant work." It is pronounced *o-pus'kul* (*o* as in *no*, *u* as in *but*, *a* as in *final*. The form you give is a variant spelling.

"R. P. C., Nineveh, N. Y.—"An article in a popular magazine states that in shipping ice from the Islands of Formosa, care must be taken not to ship any ice when there is a cargo of copra on board. What is the meaning of *copra*?"

Copra is the dried kernel of the coconut broken up for export from the Islands of the Pacific.

"W. G. A., Cincinnati, O.— "I [illegible] are [illegible] word *farther* and *further*. Can you give me the rules for using the two words? Please give two sentences illustrating the words."

Farther should be used to designate [illegible] distance; *further* to signify quantity or degree. "How much *farther* have we to go?" "Proceed no *farther* along that course."

"B. F. M., Nashua, N. H.— "Is it true that the State of New Hampshire designates its residence, as Ohio is called the *Buckeye State*, [illegible] *Hoosier State* etc. (2) Is Washington's General Leonard Wood [illegible]?"

(1) New Hampshire is known as the *Granite State*. (2) Major-General Leonard Wood was born at Winchester, New Hampshire.

"F. R., San Francisco, Cal.— "Please give a definition of the word *moron*."

A *moron* is a feeble-minded person of higher intelligence than an imbecile.

The Gilbert Thinlarm

The Alarm Clock That Is Built Like a Watch

You can tell at a glance why this compact, slender thoroughbred is winning its way into the hearts and homes of the nation.

It is an ornament to any living room, a necessity in the bedroom, a friend and companion in the kitchen.

The Gilbert Thinlarm is the only thin model alarm clock made—the result of more than a century's experience in clock-making.

Sturdy Gilbert quality and accurate timekeeping are built into this graceful and smart-looking Thinlarm.

And, best of all, the modern Gilbert method of Thinlarm construction enables you to buy it at a popular price!

If not sold by your dealer, write us

confidence that their right to the road was absolute, is strongly emphasized by a committee which was convened by Road Foreman of Engines E. W. Elleman, of the Hocking Valley, to consider this case. It enforces the grave truth that a mistake of dispatcher or operator in giving right to road, which was the primary cause of this collision, must always be considered as irreparable.

Considering the single question, what to do about the headlight, the first thought of most officers is that the rules ought to cover the point very explicitly. A rule which has been approved by the A. R. A. committee on operation requires electric lights to be dimmed "when standing." An officer of the Baltimore & Ohio states that substantially this requirement is included in the rule of his road; and a rule of this general character is in effect practically everywhere; but to what degree uniformity of wording and of practise have been agreed upon, in any territory, is a point on which further light is needed.

An officer of the Southern Railway sends the substance of a letter, concerning this collision, which was received by him from an engineman of thirty years' experience (on a line with tangents many miles long). The following paragraphs from this letter are intended, evidently, by the writer as a summary of his views as to both cause and remedy:

1. Brain fag. Loss of memory. A man sees with his brain, his eyes are only a medium for transmitting.

2. Did not err as to distance; they had no knowledge of their surroundings; caused by temporary mental aberration.

3. The difference between a strong electric headlight a half mile away and one three to six miles away is so marked, in clear weather, that no man in possession of his mental faculties could fail to note the difference.

4. To decide distances in a case like this is not difficult, assuming the engineman knows the road.

5 See that enginemen are thoroughly familiar with the physical characteristics of the road.

6. Try to see that the morals of enginemen are of the highest type and that they have ample rest before reporting for duty.

7. A lack of concentration, failure to keep one's mind on the job, is responsible for most accidents.

8. Preach precaution, prudence and morality; this results in safety of operation

Those correspondents who emphasize the difficulty of estimating the distance of an approaching electric headlight—some of them declaring that no one can trust himself to do it with certainty—make prominent the importance of correct focusing. The light should be focused downward, so as to illuminate the rails several hundred yards ahead, but not farther. A lamp improperly focused may light up the rails for many miles ahead. To quote further.

An officer of the Great Northern advises that some of the enginemen on his road propose the dimming of headlights about two-thirds, when opposing trains are nearing each other. This would aid both trains in locating themselves, and each other, while yet affording a light strong enough to drive with safety.

"The Happy Daisy Boy"

A Sport
That Makes for Manliness

With the possible exception of baseball, no sport has captured the imagination of the American boy like shooting with an air rifle.

More than a mere plaything, it has brought health, fun and manly training to millions of boys everywhere. Thousands of men will tell you, "I had a Daisy when I was a boy." Why not let your boy have this truly American training?

Different Daisy models range in price from $1.00 to $5.00, and in size to suit the youngest as well as the oldest boy. At any hardware or sporting goods dealer

Daisy Manufacturing Company, Plymouth, Mich., U.S.A.

DAISY
AIR RIFLES

was a small, square window through which the mess-boy passes the food to the officers' table. I opened the window and for over an hour tried to get a rope noose over the leopard's head without going into the room. The officers tried to help me, but the chairs and table hampered our operations. Finally I knotted the rope, lariat fashion, crawled in from the hall window and stood on the sideboard just inside the room. After several attempts I managed to get the lasso over his head.

Then the fun began. He shifted and pranced around, but I continued to hold the rope tight, at the same time throwing the end of it through the open doorway into the cage and shouting to the officers who had gathered round the cage and seized the rope, to tighten it at their end before he could pull it off. Then I ran around through the passage to lend a hand in dragging the leopard into the cage. As soon as we had him there, we put the bars down, and they stayed down until he was safely delivered to the Lincoln Park zoo in Chicago.

THE CAVORTING OF KARTOUM, THE ELEPHANT

ELEPHANTS should not frisk too gaily in the spring, at least not to the extent of butting gates, reinforced with railroad iron, into bent and twisted wrecks. The joy of his first promenade brought quick punishment to Kartoum the big African elephant at the New York Zoological Gardens, and closed his outdoor holiday for the time being. During the warm April days Keeper Richards turned the Indian elephant, Alice, outside into her big yard for the first time since autumn. Alice ran in great shuffling circles, waving her trunk and trumpeting in high glee. And then, says the *Zoological Society Bulletin* (New York):

Kartoum, at the other end of the building, responded in a thunderous voice and pounded on the door to attract Keeper Thuman's attention. Thuman swung open the massive doors and the great beast was immediately on the run, flapping his huge ears, tearing up great clods of turf and tossing them high over his neck, and otherwise greeting the outside air of a wonderful day. All would have gone well if Kartoum had been satisfied with these manifestations, which brought a crowd of visitors to enjoy the sport, but he decided to speed up the fun by butting the fences. There had been a bad bend in one of the massive top rails, which we had in mind as a job for the blacksmith. This was produced by the elephant's antics directed from the adjoining yard during the spring of 1921. Kartoum headed for this bulge in the fence, and with one well-directed blow of his ponderous head he straightened it as thoroughly as if the iron-workers had been at work for a day.

But this failed to close the performance. Noting his success at short range, he backed well up and charged the partition gate, which is reinforced with heavy railroad iron, and the gate was bent over more than three feet at the top, heavy bolts were stript of threads, and the structure reduced to a state of ruin. As Kartoum gleefully swung around to aim a drive at the other gates, he was hurriedly escorted indoors by Keeper Thuman, and there he remained until his exuberance materially calmed down.

Dr. Lyon's

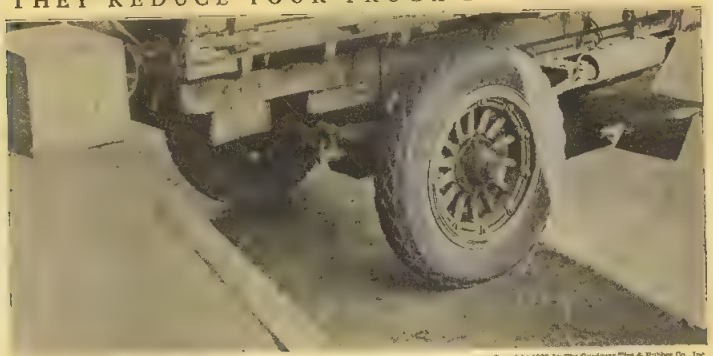
THEY REDUCE YOUR TRUCK DEPRECIATION



Actual photograph of Goodyear Cord Truck Tires on the mixer of the National Lead Company of Massachusetts, Boston, Mass.

Copyright 1922, by The Goodyear Tire & Rubber Co., Inc.

"We have used Goodyear Cord Truck Tires on two of our trucks and are thoroughly satisfied with their service and qualities of durability and dependability. There has been less truck depreciation and we believe the equipment will lengthen the life of the trucks considerably. Our trucks haul daily between Salem and Boston, in all conditions of weather, over country roads and through narrow, congested city streets and yards. Goodyear Cord Tires have aided materially in solving our hauling problem"

—A. P. CURTIS, Comptroller, National Lead Company of Massachusetts, Boston, Massachusetts

MANY users of Goodyear Cord Truck Tires have noted what the National Lead Company here reports, that the cushioning action of these buoyant tires prolongs the life of the truck and cuts down bills for replacements and repairs.

They furnish a great measure of protection to the valuable mechanism of the truck, especially in city and interurban hauling, over unequal pavements. They protect the truck and the driver, the load and the road, and their resilience lasts.

They are strong, rugged tires, too. Between them and ordinary pneumatics for motor trucks, there is a world of difference. They are designed to keep their full strength always under the load, and to be strongest where the utmost stress occurs.

The patented Goodyear method by which they are built up, with the cord plies laid in groups alternating in direction and insulated by layers of pure rubber reduces internal friction and keeps them cool, so that in hard, fast service, they wear and wear and wear.

Goodyear Cord Truck Tire (Pneumatic)

Goodyear All-Weather Tread Solid

Goodyear Hollow-Center Cushion Tire

Their activity is known to hundreds of businesses that credit increased range, prompter deliveries, and more satisfied customers, to the gripping, tractive action of these tires with their Goodyear All-Weather Tread.

Goodyear Cord Tires are recommended for all 'round equipment on trucks up to three-ton capacity, and on the front wheels of heavy-duty trucks where body clearance and load conditions permit.

There are special Goodyear Truck Tires for every hauling need—Goodyear Cords, Goodyear All-Weather Tread Solids, Goodyear Cushion Tires. Call upon your Goodyear Dealer for the benefit of his unbiased judgment in specifying the particular Goodyear Truck Tire that will serve you longest and best.

GOODYEAR

"Studies and fun can't crowd out music if you have a Gulbransen!"

"Studies, dances, parties, athletics—how in the world does a busy girl have time for music?

"I wondered—before we got the Gulbransen. Now I know.

"Ten or fifteen minutes a day—if that is all the spare time I happen to have—keeps me in touch with the best in music. Enables me to play with all the personal satisfaction that any musician feels, but without the hours of practicing, practicing, practicing.

"If only all my problems were as easily solved as that of music!"

* * * * *

You mothers who wish your daughters to have an accomplishment—to have an intimate knowledge of music in general, and to be able to converse intelligently on the subject—the Gulbransen also solves a problem for you.

In every feature it is *designed* for artistic playing:

first—the construction of the instrument itself

second—its tone.

third—the *exclusive* Instruction Rolls.

fourth—the *exclusive* Melody Indicator.

Four rolls and the right player-piano —the Gulbransen!

"You'll be delighted with your Gulbransen, Mrs. Brown – that I know

"Another thing I know: You will want to play it correctly, artistically.

"Study these four Instruction Rolls a few evenings, Mrs. Brown; they will do for you what practice exercises and a good teacher do for the pianist.

"Except that they are *simple;* not at all difficult, monotonous, tedious—like finger exercises.

"Far from it! They're just as much fun as learning the latest dance step or driving a new car.

"Your friends, hearing you play, will pronounce the Gulbransen a fine instrument—will say it is different from other player-pianos—*and it is!*"

* * * * *

Our interest, and the dealer's interest, go beyond the mere making of a sale.

Having produced a player-piano that *can* be played well, we go a step farther and make it easy for anyone to *do* it—quickly and surely.

Instruction Rolls are exclusive with the Gulbransen, supplied without extra cost with the White House, Country Seat and Suburban Models.

Try the Gulbransen at our dealer's; we will gladly send you his name and address.

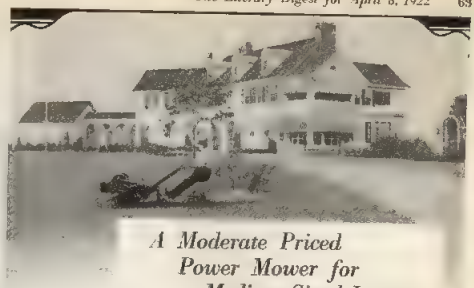
many different kinds of salamanders, chiefly busied in cleaning out the various different cracks and corners in Mother Nature's house. In some places in this country there are salamanders that live their entire lives in the trees, tho they look as tho they ought to be living in the water. One of the most common species is that whose life history is shown in the accompanying graph, the newt. This little amphibian may be found along the edge of ponds or in streams. He is mostly brown above and yellowish beneath. The writer says:

If you keep some of them in your aquarium you will very quickly find that many of the smaller animals living there will disappear, and if you are lucky enough you will possibly see some of them go where the others have, —down the throats of your newts.

It is possible that in the early spring the newts are more interested in their own family affairs than they are in caring for Mother Nature's house. Certain it is that their eggs are laid at that time of the year. You may see these eggs, which look not unlike little beads of jelly, but the chances are that you will not see them for they are attached to water plants and are often wrapped in or hidden among, the leaves so that they are not easily seen. These eggs hatch into little newts wearing ruffles at their necks not unlike those which the mud puppies have. These little newts grow rapidly and in late summer lose their ruffles and come out on the land. At this time they are small and red, and are very interesting little creatures to watch.

For the next two years these little red newts go about cleaning up cracks and corners on the floor of Mother Nature's house. Sometimes you will find them under stones, sometimes under leaves, sometimes in rotting logs, and sometimes walking around over open ground. All the time, as they work, they are growing larger and stronger. They still keep their red color and will make nice pets. At the end of two years from the time they left the water, they go back to it. Then they begin to look like their parents, and begin to do the same sort of work that their parents did before them. Instead of being red, they turn brown, for the most part. Their tails now look more like the tails of polliwogs than they did when the newts were living on land. The newts spend all the rest of their lives eating insects, and polliwogs, and fish eggs, and other things which they find in the bottoms of the sinks and drains of Mother Nature's house. Each spring they lay eggs which develop into more little newts. From this you may know that newts work both on the land and in the water. Probably they do more good than harm, particularly while they are on land, and certainly they are worth watching because of their interesting ways.

Between the mud puppies in the deep water and the red-backed salamanders in the logs in the woodland, the crevices in the floor of Mother Nature's house are kept pretty clean. The two-lined salamanders help at the edges of the colder brooks; the newts work in the shallower waters of warmer ponds and lakes. On the land, the dusky salamanders care for the places under stones in wet places and are helped in their work by the slimy salamanders. In the more open land the spotted salamanders do their work, and with the assistance of all of these, Mother Nature finds it possible to keep her floor fairly well cleaned out.



A Moderate Priced Power Mower for Medium Sized Lawns

Above photo 30" Ideal with rising trailer used on estate of H. C. Hisk, Longmeadow, Mass.

Here is a Power Lawn Mower that will be welcomed by thousands of home owners who have large lawns to care for.
We call it the Ideal "Junior." It is a machine that fulfills a greater need than any power mower ever built. It is surprisingly moderate in price, absolutely dependable, easy to handle, and costs but a few cents per day to operate.
In general principle the Ideal Junior is exactly the same as the larger Ideal Power Lawn Mower which is giving universal satisfaction upon thousands of the best kept lawns in the country. It is smaller and lighter in weight, having a 22-inch cut. It will mow from 3 to 4 acres of grass per day. Just the machine to use when there is too much grass to economically cut with hand mowers, yet where the lawn is hardly large enough to warrant the purchase of a larger power mower.
Also used by golf clubs for work on putting greens, and by parks and cemeteries for close cutting, trimming around shrubbery and as an auxiliary unit to the larger power mowers.

The Ideal Power Mower for Large Lawns

For larger lawns the standard Ideal Power Lawn Mower has no equal. It cuts from 5 to 6 acres of grass per day, doing the work of 6 or 7 men. There are thousands of these machines in use on private estates, public parks, golf courses, college grounds, industrial grounds, cemeteries, etc.
They are wonderful labor savers and stand up year after year with just the ordinary attention that any good machine requires.

For Large Parks and Golf Courses

For large parks and golf courses we build the Ideal Power Triplex Mower which cuts from 25 to 30 acres of grass per day.
Write today and get details of the complete line of Ideal Power Mowers. If you want our recommendation, tell us the size of your lawn, condition of grounds, etc.

Order Your Ideal Power Mower *this* Week!

Grass cutting time is here! Now is when you should order your Ideal Power Lawn Mower—give your lawn proper care right from the season's start and get full benefit of the big saving in labor.

The Ideal Junior, shown below at left, is exactly the right machine for medium sized lawns. It is a dependable, moderate priced mower that will prove a paying investment on lawns when there is too much grass to conveniently care for with hand mowers.

The 30" Ideal, shown above, is used by more large estates, parks, schools, colleges, hospitals, golf clubs, ball parks, tennis clubs, etc., than any power lawn mower ever built. This sturdy, powerful and simple mower will easily cut 5 or 6 acres of grass per day, doing the work of 5 or 6 men with hand mowers.

Ideal Power Lawn Mowers are carried in stock in all sections of the country. You can get immediate delivery from any of the dealers at the addresses listed below.

Call at any of these addresses—see for yourself the many advantages of these labor-saving machines.

PERSONAL GLIMPSES
Continued

unmarried, in order to be successful (as a woman) in business.

My hair is growing thin. What of it? My waistband augments with the years. That unesthetic circumstance merely adds to my respectability. Am I getting wrinkles about the eyes? How do I know? I never thought to look. Moreover—and this is the point—neither did anybody else—not even my wife. My looks are my own affair. My clothes (within very wide limits), the same. My gait, my laughter, my conversation, my moods, all ditto. I have to do a bit of work, but in all other respects I am *free*. Free to look and act and be myself, without any artifice, any play-acting.

My most fervent thanks to "whatever gods may be" that I am a man!

And I hereby swear that every "movement," every tendency, in the direction of giving the women of the future the same priceless freedom of personality shall have my support.

JOHN FRANTZEN WAS THE MAN WHO SENT RADIO JESTS OF DEATH

"UNKNOWN, unhonored and unsung," will not be the fate of the jesting wireless operator, lost when the Norwegian steamer *Grontoft* went down with all aboard in one of the March gales that swept the mid-Atlantic. The man's bravery was mentioned in cables at the time, but nobody knew his name. Investigation by a New Orleans newspaper reporter at the Norwegian consul's office in that city has disclosed not only the name of the radio jester, but also a curious and apparently significant curse against the schooner, scribbled on the walls of the narrow corridor near the consul's office. John Frantzen, a Norwegian, 26 years old, second mate of the ship, was the radio operator who stuck to his key, sporting with death, until *Grontoft*, her life-boat smashed, went down stern foremost, with all on board. On the same ship, it develops, there may have gone down another man whose death was almost as dramatic, if far less heroic than Frantzen's. This man, it is believed, drew a picture of the *Grontoft* on the walls of the corridor that lead to the Norwegian consul's office, and wrote underneath his sketch: "We wish you a happy voyage to Hell—if not this summer, then next year." Superstitious sailormen of the Southern city say that the fate of the *Grontoft* was foretold in this message on the walls of the corridor.

The New Orleans *Times-Picayune* tells both of Frantzen and of the curse against the ship which later foundered in mid-Atlantic. Beginning with the hero in the case, we read:

A carefree sailor, the life of the *Grontoft* crew, Frantzen was betrothed to a Norwegian girl of Esjburg, whither the ship was bound with a cargo of grain from New Orleans, it was learned Thursday. Her grief will be shared by wives and sweethearts of the other members of the crew, nearly every one of whom were Scandinavians.

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

JUST as the KIMBALL was the instrument of preference by great musicians and in the home during its long years of past service, and today is serving a nation of music lovers with ever increasing favor, so the future holds assurance of this self-same merit and reliability—truly an instrument of enduring worth. KIMBALL Grands, Uprights, Player Pianos, and Phonographs are representative of the highest degree of manufacturing excellence. A KIMBALL in the home assures music at its best.

has to be one thing or another, but just why any one started this particular health stunt agitation is not known. So far as known there had been no great popular demand for arbitration of breakfast, the principal interest being along high cost of living rather than health lines.

Now, however, a lot of people who have been eating light breakfasts will think that they will have to go to the other extreme. Eventually the dictum in the matter will be forgotten, along with the rest of the cults that flourish in health as well as other affairs, and people influenced to change their eating habits will revert to the practises that please and best agree with them. The medical decree in the present instance will not have nearly the influence on boarding-house keepers, on whom so many people of sedentary occupation depend for sustenance, as would if the 73 per cent. had voiced the opinion of the thirteen.

MEASURING STARLIGHT

THE heat of starlight has been determined for the first time by measuring a hundred millionth degree of temperature and a trillionth of an ampere of electric current. Dr. C. G. Abbot, of the Smithsonian Institution, announced this achievement in an address at the Carnegie Institution of Washington, as reported in Science Service's *Daily Science News Bulletin* (Washington). Working with the 100-inch telescope at Mt. Wilson Observatory this fall, Dr. Abbot measured the heat at different parts of the spectrum of ten stars and the sun. The rays were dispersed by a spectroscope in a band similar to the rainbow. We read:

The bright star Capella, which is very similar to our own sun in its spectrum, was found to furnish the equivalent of one horse-power to an area on the earth approximately equal to the State of Minnesota. But this prominent star is feeble compared with our sun, which is equal to a hundred billion Capellas and sends down on twenty square feet heat equal to a horse-power. On the whole earth Capella's heat equals 500 horse-power, and as all the stars together equal 500 Capellas this would amount to 250,000 horse-power over the whole earth from the stars alone.

Dr. Abbot explained that his work on the heat of stars, accomplished with the cooperation of L. B. Aldrich of his staff, is an outgrowth of the principal work of the Astrophysical Observatory, which is the investigation of the sun.

"This work was begun about 1890 by Dr. S. P. Langley whose great pioneer work in measuring the sun's heat, its distribution in the spectrum, and the losses and modifications which it encounters in passing through the earth's atmosphere, were classic," said Dr. Abbot.

It might be supposed that the investigation of a heat source whose in-put on the earth's surface amounts to the equivalent of a horse-power per couple of square yards would require only simple and insensitive apparatus, but such is not the case. The complexity of the solar beam, made up of rays of greatly differing wave-length which are all differently transmitted by the earth's

wise. Forthwith I experienced all manner of trouble, for try as I would it seemed impossible to obtain any sort of accurate adjustment. The tappets were first much too tight, then much too loose. There was no rhyme nor reason to the thing—a fact which caused me days of work and worry minus use of the car

I decided that I would condescend to glance through the instruction book, or rather I decided upon the printed advice of the manufacturer as a last resort. But where was it? Oh, yes, I had tucked it away in my desk to keep it clean. Some day—that day we all expect when time will be plentiful—I would recline in an easy chair and read it from cover to cover. It goes without saying that this elusive day of rest might have been forthcoming had I read first before leaping. It developed that the tappets of my car were of the mushroom type, which means that the push rod is free to turn about so that the flat end that rides the camshaft will wear evenly. When I turned the adjusting nuts the tappets turned with them, and that accounted for my inability to effect any sort of reasonable adjustment. I should have used a third wrench to hold the push rod while I made the adjustment. In other words, I should have read my instruction book.

Yet the instruction book is treated unmercifully. They need a Laura Jean Libby to write it, insists this critic. Then perhaps Old Boy Hard Experience wouldn't have such a monopoly on the situation. To him is left the task of eventually turning every motorist back to his instruction book, which he does to perfection, the always after the damage has been done and the bills paid. However—

The motorist in question is now so partial to his instruction book that he has ordered a new one in case something happens to the original. And when I explain how it happened that he paid a nifty repair bill, the reader will appreciate the reason for his change of heart. Whenever this chap had any spare time he always tried to find trouble, even if there wasn't any to be found. He carried the idea of car care to extremes. To this, furthermore, was added the additional fault of assuming that he knew as much as the manufacturer could divulge via instruction book.

At length this led him to inspect the distributor. He couldn't find any dirt in the cover, nor could he find anything wrong But he had high hopes. He was not entirely unsuccessful, for, lo and behold! it developed that the tip of the rotor was not touching the contact points of the distributor head. How then was the spark ever going to reach the ignition wires? How was the motor to run with all this out of commission?

Much to his chagrin, however, he had to admit that the motor had been running, and most decently at that. Yet there was no contact. It worried him. Worried him so that at length he lifted out the rotor and by bending the tip with the pliers fixt it so that in revolving it would touch each of the contact points. Then he replaced the cover and started the engine.

Whereupon the distributor made itself known by emitting an uncanny noise. It clicked and trembled and carried on in a most unusual manner. Presently there was a culminating click followed by utter silence. The engine paused, deliberated and decided to pitch tent for the night. There was nothing left in the way of action except the motorist's flow of cussing. When he

KIMBALL

"Masterful in quality and charm of tone"

The KIMBALL includes:

Grand Pianos
Upright Pianos
Player Pianos
Phrasonome Pianos
Reproducing Pianos
Phonographs
Pipe Organs
Music Rolls

THERE is a distinctive quality in the KIMBALL charming tone that can only be described as "masterful." World-famed artists of the past and present have recognized this distinguishing quality—and have accorded to the KIMBALL an enthusiastic endorsement.

MACGREGOR

Radite *Won't-Rust* Irons
Retain Perfect Balance

IT ISN'T only that you can play these clubs in the worst kind of rain, wet, sleet or slush without danger of rusting—but there is a very practical golfing reason in their favor.

Constant buffing on the emery wheel to keep your irons shined up is bound gradually to wear away the metal enough so as to change in time the weight of the clubs as well as the balance, feel and actual resilience

Yet with these Radite Irons your Pro need only to wipe them off after each round to keep them in the finest possible shape—shiny and sound. Not only is this a lot easier and more satisfactory for the Pro—but it is better for the clubs, for their original balance and weight are not changed even in the slightest.

Locker dampness—wet course—sea air—nothing affects Radite Irons. They always retain the same perfect balance. Ask your Pro or Dealer about them and let us send you descriptive catalog and further information

LINCOLN ELECTRIC MOTORS

Lincoln Guarantees This "Cure" for "Bad Power Factor"

"BAD POWER FACTOR"—that fearsome electrical bogey which boosts your power bill and eats up the power company's profits. It is as mysterious as witchcraft and demands the same "cure"—plain, common sense.

"Bad power factor" can only result from putting the *wrong* motor on the machine. Lincoln Engineers are giving the "bad power factor" the common sense treatment by putting the *right* motor on the machine. They go direct to the machinery maker—test his different machines—find out the exact type and size of motor needed for each of his models—and give him a chart showing the result.

That sounds like a simple remedy, but it strikes at the very root of the trouble by removing the cause. Every outfit which the machinery maker ships out under this plan has a Lincoln Motor which is *guaranteed* to do the work with the least possible amount of power and hence to give a "good power factor."

If this Lincoln method had been generally used in applying motors to machinery there would be practically no such thing as "bad power factor." Millions of dollars would be saved to power users and power plants as well, where it is now wasted because of motors which are the wrong size, or the wrong type, or both

You can start today to improve the power factor in your plant by asking that any new machinery you buy be equipped with Lincoln Motors applied and *guaranteed* by Lincoln Engineers

SCIENCE AND INVENTION
Continued

speaking, are divided into two classes. Those emitted by the respiration, both from the lungs and the skin of the people in the room; second, those emitted by the illuminants. The first class includes bacteria taken from the air into the system through the mouth or skin. As a matter of fact, the supposedly fresh air from the exterior is often heavily laden with bacteria of this character

More commonly than any other are felt the effects of the vitiation produced by the organic matter, in a greater or less advanced stage of decay, exhaled by the lungs. This produces the stuffiness in a poorly ventilated room which is sometimes ignorantly attributed to carbonic acid gas.

Carbonic acid gas is present in the purest of outdoor air in the proportion of about four parts in 10,000 and produces no discomfort or ill effects if less than 225 parts in 10,000 of air are present. On account of the ability of gases to diffuse through even the tightest walls used in building construction, the proportion of carbonic acid gas in interiors rarely rises above 20 parts in 10,000, tho for experimental purposes this proportion has been made as high as 50 parts in 10,000. This was accomplished only by resorting to exceptional means to secure a high percentage of this gas. Thus, practically speaking, it may be said that it is impossible in practise to obtain enough carbonic acid gas in an ordinary room to produce the slightest effect upon the bodily functions, even when the most sensitive tests are employed to detect such effects.

Sulfurous acid gas when present is in such almost infinitesmal quantities that it is disregarded as far as the effects on health are concerned. While it is, in the quantities found, harmless to the human organism it has a decided sterilizing effect as regards disease germs.

While it is true that carbonic acid gas artificially produced—that is, by gas combustion—is entirely innocuous in any quantity met with in human habitations, it must not be assumed that such quantities of this gas exhaled from the lungs, may be regarded as an indication of sanitary conditions. On the contrary, even 15 parts of carbonic acid gas in 10,000, if arising from respiration of human beings, indicates the presence of organic matter in such quantities as to be highly obnoxious or even harmful

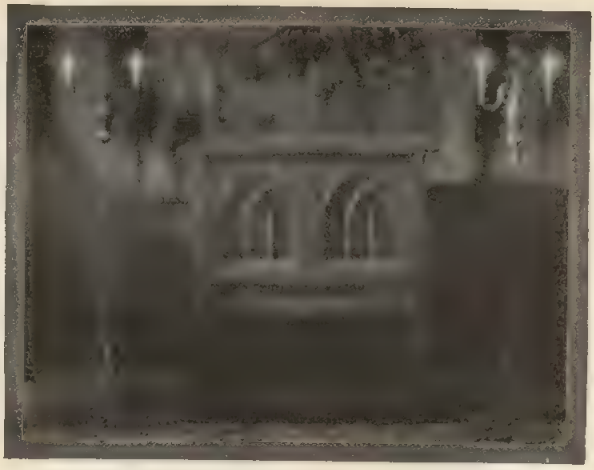
In this connection it should be noted that the vitiation of air by human beings is generally expresst as percentage of carbonic acid gas, because it indicates the amount of organic matter which has been given off in the same period, and while the latter (which is a real source of pollution) is difficult to measure, the carbonic acid gas is easily determined.

From a sanitary standpoint, therefore, figures regarding the quantities in which carbonic acid gas indicates harmful conditions apply only to this gas when thrown off by the lungs and not to the same gas produced by artificial means

It is evident that the practise of rating each gas-burner as equal to a certain number of human beings in vitiating the air in interiors is opposite to the dictates of common sense.

Investigators on the effects of carbon-dioxid report as follows, as quoted by Dr Shears:

Dr. Angus Smith shut himself in an air-



RADIO CAN BE BEAUTIFUL AS WELL AS MUSICAL

THE Lyradion is the most versatile musical instrument ever built; it is either a high-powered radio receiving instrument or a *reproducing* phonograph with a wonderful perfection of *natural tone.*

The secret of the Lyradion's power and sweetness lies in the patented Seabrook Amplifying Horn made of a cast clay composition, which, having no vibrating properties of its own can neither add to nor detract from the selection broadcasted or recorded.

Radio cannot depend for it's future upon ear phones, tin horns, or loose batteries and wires strewn over the floor any more than the phonograph could have survived as a musical instrument under similar condition.

The Lyradion is a piece of furniture that will match any home—radio or phonograph are heard perfectly through the same horn by a roomful of friends.

And, best of all, you hear the voice, the violin, the orchestra—*even the piano*—in the original tone because the Lyradion *receives without distortion and amplifies without fault.*

When winter comes, and evenings are long, tune your Lyradion to Chicago, Detroit, Newark, Schenectady, Atlanta, Kansas City, Davenport, Pittsburgh, or Fort Worth, Texas—extend your family circle to include the Nation.

Hear music before unknown to you—hear Grand Opera—dance to distant "jazz" orchestras—hear the news of the world—become acquainted with new personalities—all by Radio—all with no cost to you after you own the instrument—and all within your own home.

Let us tell you more about the Lyradion—the newest and most marvelous instrument ever known for home entertainment.

Let us put a Lyradion in your home for demonstration—*for tone—for distance*—as a *radio*—or as a *phonograph.*

If it satisfies—if it entertains—if it pleases—make it your Christmas present to the family—anyway, write for the Lyradion Catalog showing 12 beautiful period models of radio only or radio and phonograph combinations from $250 to $1,100.

Special Models Concert Grande Size for Theatres, Clubs, Drawing Rooms, Churches, Lodges, etc., $750 to $2,150.

CURRENT EVENTS

FOREIGN

May 17.—The French Government accepts the proposal of the British Government for an international inquiry into Turkish atrocities.

In a pitched battle between police and soldiers and Sinn Fein gunmen in Belfast one man is killed and five are wounded.

May 18.—Michael Collins, Chairman of the Irish Free State Government, and Eamon De Valera, leader of the Republicans, confer in an effort to bring peace between the two parties. Meanwhile disorders in Belfast result in the death of six men and the wounding of several.

May 19.—The Genoa Conference ends with the following accomplishments: an eight months' European and Near Eastern truce embodied in a provisional pact of non-aggression; agreement to meet and discuss Russian affairs at The Hague not later than June 20; approval of proposals for further conference, and the Russo-German treaty, not on the agenda.

Lady Rhondda's claim to a seat in the House of Lords is rejected by the Committee on Privileges, which reserves its formal decision.

Michael Collins and Eamon De Valera report to the Dail Eireann that they have failed to reach an agreement. Seven persons are killed and nearly a dozen wounded in outrages in Belfast.

Italy and Jugo-Slavia have reached an agreement by which Fiume is acknowledged as an independent state and a commercial treaty is completed between the two countries.

May 20.—The Irish Free State and De Valera factions reach an agreement under which a coalition ticket will be submitted to the voters, the chance of war remaining with the Irish Free State.

Leonid Krassin, Russian Bolshevik representative in London, is appointed Soviet Ambassador to Germany, according to a dispatch from Berlin.

May 21.—Ninety people, including two American missionaries on their way to India are lost when the Peninsular and Oriental liner *Egypt* sinks off the Island of Ushant after a collision with the French freighter *Seine*.

Incendiarism, looting and shooting mark the week-end in Belfast. Thirteen people are reported to have been killed, bringing the total for the week up to thirty-five.

Russian batteries in the Black Sea are reported to have sunk the Italian steamship *Marte*. Half the crew is said to have been killed.

May 22.—W. T. Twaddell, member of the Ulster Parliament from West Belfast is shot to death by gunmen.

A rebellion of eight hours' duration in Nicaragua is put down by a handful of American marines without firing a shot.

DOMESTIC

May 16.—Gifford Pinchot, who was nominated in the place of Theodore Roosevelt, wins the Republican nomination for governor of Pennsylvania over Attorney-General George E. Alter.

Fifty-five thousand square miles of land in Louisiana and Mississippi are over-

KIMBALL

VACATION TRIPS AND PLAY-GROUNDS—*Continued*

TRIPS ON THE GREAT LAKES

Speaking of our inland fresh water seas, Frederick A. Talbot in his "Steamship Conquest of the World" (J. B. Lippincott Co.) says:

"A cruise around these Great Lakes has developed into as popular a holiday among Americans and Canadians as a trip to the fjords of Norway or the Mediterranean is among Europeans, while many transcontinental travelers welcome two days on these waters as a pleasant interlude to the 4,000 miles of railway ride from the Atlantic to the Pacific seaboard."

Along their shores are many delightful vacation centers and points of unusual interest. There is Cleveland, one of the handsomest of American cities; Detroit with its waterside parks and huge motor factories; the island labyrinth of Georgian Bay; Mackinac with its scenic and historical charm; the great locks at Sault Ste. Marie; shores of resorts along both shores of Lake Michigan and Lake Superior. A table of Great Lakes Routes is given elsewhere.

SELECTED BOOKS ON GREAT LAKES REGION

Sketches in Dunsland, Earl H. Reed, Dodd, Mead & Co. $3.00.
Tales of a Vanishing River, Earl H. Reed, Dodd Mead & Co. $4.00.
The Sand Dunes of Indiana, B. Stillman Bailey, A. C. McClurg & Co., $5.00.
A Naturalist in the Great Lakes Region, E. R. Downing, Univ. of Chicago Press, $3.00.
Chicago and Old Northwest, Milo Quaif, Univ. of Chicago Press, $2.00.

MINNESOTA'S SPORTSMEN'S ELYSIUM

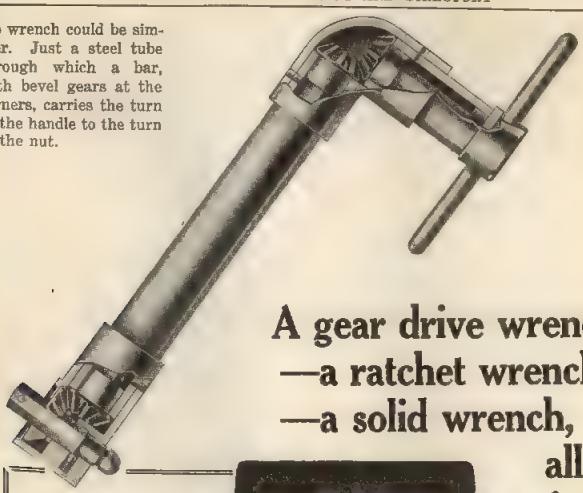
Easily accessible for week-end trips from Chicago are a series of lake resorts in Wisconsin much in favor with residents of the Middle West. Boating, bathing and fishing are enjoyed at such popular resorts as Geneva Lake, Lake Winnebago, Fox Lake, Green Lake, Zurich, Mendota, Beaver and a multitude of smaller ones.

If we continue, however, farther northwest to St. Paul or Duluth, we find east and north of the Mississippi Valley the labyrinth of lakes, lakelets and intersecting waters which are designated as the Ten Thousand Lakes of Minnesota, an elysium for the canoeist, camper and fisherman who delights in leaving the beaten paths.

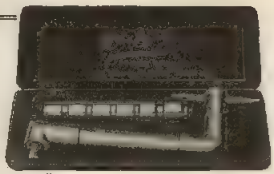
"It is a real wilderness," writes the editor of *Outing Magazine;* "make no mistake about that. If solitude is your key to happiness you can travel for days without seeing another human face or coming within sound of a locomotive whistle. You can be as strenuous or as lazy as you like—work twelve hours a day or loaf and invite your soul. And all around will spread the serene difference and peace of the North Woods."

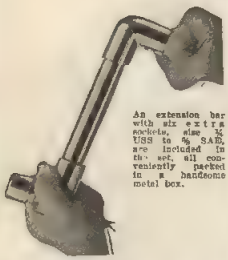
The main points of entry are by way of Duluth or St. Paul. Details of the above routes with fish and game regulations and special advice to campers should be obtained from the Minnesota Land and Lake Attractions Board of St. Paul.

No wrench could be simpler. Just a steel tube through which a bar, with bevel gears at the corners, carries the turn of the handle to the turn of the nut.



A gear drive wrench —a ratchet wrench, —a solid wrench, all in one!





An extension bar with six extra sockets, size ¾ USS to ⅝ SAE, are included in the set, all conveniently packed in a handsome metal box.

The most useful all-purpose wrench ever offered to the trade. Can be used by workmen and householders alike

Reaches the inaccessible places.

No job too hard for it to handle.

When nut is frozen it can be used as a solid wrench by shifting socket pin.

It serves also a "gear drive" wrench and ratchet wrench

Made of finest steels—heat treated—and is guaranteed as to quality and workmanship. Liberal trade discounts—ask for them.

Eastern college for women, writes, in a hardly less condemnatory vein:

I am a woman who was born immediately after the Civil War, and at thirteen and fourteen was still going through what we then called a reconstruction period. The older people were somewhat alarmed at the freedom of the younger ones. As I look back over that time, I see that the only freedom we were really allowed was the privilege of walking a few blocks from our own homes with a young man to some well-chaperoned dance. We were also allowed to go horseback riding. Moonlight excursions with several chaperones were the most

"MORAL CHAOS"

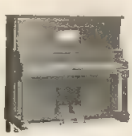
J. I. Riddle, a high school principal at Attalla, Alabama, calls upon American civilization to awaken from its "imperfect sleep over the pit of moral chaos before it is too late.

advanced liberty that was allowed us. We had had no such thing as sex hygiene taught us and we never would have dreamed of mentioning this subject to young men of our acquaintance. We were extremely careful never to cross our legs or to stand with our feet spread wide apart. We were imprest with the idea by our elders that these things were vulgar and a sign of ill-breeding. We were also told that we should not allow the young men with whom we associated to handle or kiss us, as nice girls did not do these things, and nice men did not wish that kind of girl for a wife. A man wanted a girl for his wife who had not been kissed by other men. I do not believe that many girls were given the reasons why they should not do these things.

To-day we have the sex question openly discust in mixed classes. We have men professors teaching biology to girls in the plainest and most advanced fashion. There is no secret of the human body or of sex that is not pretty well known to the average girl of sixteen. I have had girls of eighteen tell me that sex was a subject of conversation between the modern girl and young men. I would almost believe from conservation that sex was a dead issue were it not that we still have marriage, which is the ultimate end of sex. I am not prepared to say that the modern girl is any less moral than we were, but I do say that there are two words which can be applied to her and which she deserves from her conduct—

KIMBALL

"Quality made the name—the name insures the quality"



Now Serving a Nation of Music Lovers

THE KIMBALL is the instrument of preference in discriminating homes everywhere—indeed, a splendid testimonial of musical excellence. Charming in physical appearance and of superior workmanship—the superb tonal qualities of the KIMBALL will delight you.

What Other Wood Can Equal This Record?

SIXTY-NINE years ago this Redwood timber became a gate post. It served 60 years, through rain and drought, was dug up to let a railway through, and now perpetuates the name of one of the country's pioneer ranchmen. Sound above and below ground, this post offers convincing testimony of Redwood's remarkable rot-resistance.

A *natural*, odorless preservative, which permeates Redwood during the tree's growth, protects Redwood against all sorts of fungus, rot and decay. Wood-boring worms and insects leave Redwood alone. Redwood burns slowly because it contains no pitch or resin—reduces the fire hazard wherever used.

The cost of Redwood compares favorably with that of other lumber, which cannot compare with Redwood for utility and long service.

If you are planning to build, write for our "Redwood Homes Booklet." To architects, builders and engineers we will send our Complete Redwood Engineering Data.

PENNSYLVANIA LAWN MOWER WORKS
JOHN [illegible] & SONS
FOUNDED 1877 PHILADELPHIA

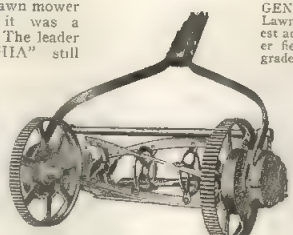
The Genuine

"PHILADELPHIA"

Lawn Mowers

In 1869 the side wheel lawn mower was invented. And it was a "PHILADELPHIA." The leader then, "PHILADELPHIA" still LEADS TODAY

Long experience combined with the highest manufacturing principles, and strict adherence to a fifty-three year old tradition guarantees that every "PHILADELPHIA" Lawn Mower will be MADE FOR LONG SERVICE AND SATISFACTION



Style "GRAHAM" and "A" all steel Pivot on 3 all steel runners made

GENUINE "PHILADELPHIA" Lawn Mowers are the very highest achievement in the lawn mower field. Only the very highest grade raw materials are employed.

The straight long parallel bearings are without a doubt the longest lived and most satisfactory. We do, however, put roller bearings in a few styles which are far superior to the old style ball bearings and in comparison wear much longer. No other lawn mowers are made like "PHILADELPHIA" —NONE CAN BE—for we control the important basic patents.

We Make the Following Styles

STYLE "GRAHAM," all steel. 10" wheels, 4 blades.
STYLE A,' all steel, 10" wheels, 4 blades
STYLE E,' 10" wheels, 4 blades
STYLE K' 10" wheels, 5 blades.
STYLE KRB," 10" wheels, 5 blades
STYLE C, 8½" wheels, 4 blades
STYLE 'M,' 7" wheels, 3 solid blades
GOLF, 6 and 8 blades, 10" wheels.

INDEPENDENCE, roller bearing, 9" wheels, 4 blades.
ALL DAY, 10" wheels, 4 blades
DEWEY, 8" wheels, 4 blades.
UNIVERSITY, 9" wheels, 4 blades.
DREXEL, 8" wheels, 3 blades.
NEW, 8" wheels, 3 blades.
STYLE "S," 7" wheels, 4 blades.
Lawn Trimmer, 8" wheel, 4 blades

IMPROVED FLEXIBLE FRAME "EAGLE," "PHILADELPHIA," 30", 35" and 40"
"PHILADELPHIA," 36".

31st & Chestnut Sts., Philadelphia, Pa., U. S. A.

SENATE CHAMBER CLOSE-UPS

"SHOOT!" cries the movie-director, and the camera-man turns his crank, while living figures picture themselves on celluloid for all the world to see. But there are other cameras. The eye is one. Particularly a writer's eye. And when we take up Mr. Robert Littell's vivid description of figures in the United States Senate, we can almost hear a director's voice cry, "Shoot!" Mr. Littell has "shot" Senator Reed of Missouri. He has "shot" Wadsworth of New York and Lodge of Massachusetts and a dozen or so besides. If it was not Mr. Littell who wrote "The Mirrors of Washington"—a movie, in its way—it might plausibly enough have been Mr. Littell, and the burden of proof rests with him, or so readers of his article in the *New Republic* are saying. They base their guess on such evidence, for example, of this "close-up" of Senator Reed:

A one-sided man, with a dark, bitter talent for improvised speech, which he uses only in destruction. He never throws or squirts his vitriol, but pours it out drop by drop into perfectly formed little pools of sarcasm and hatred. After each sentence he waits for the acid to corrode its path into evil, and moves slowly a few steps to the right or left of his desk. A plain figure, neither fat nor thin, in plain blue clothes, with short businesslike gray hair, features scornful, a little ascetic. His words have rhythm, design, but his voice none, breaking after periodic lulls into loud, dangerous tones; a clear-cut voice, of a few notes except for times when, as he leans forward, it shrivels in an ecstasy of sarcasm.

Naturally, Mr. Littell speaks for himself alone. Whether this is portraiture or caricature or a mingling of the two, the reader is left to judge, and so again in the case of Mr. Littell's "shot" at Senator Wadsworth:

A shapely, bald figure, very straight, young and vigorous, in a black cutaway; cold, incisive, with a voice of Eastern cultivation, in which a deep, intolerant anger moves just below the surface. Even when he is not angry this tone can be heard. I can see him respecting his anger, feeding it, taking it out on a leash for exercise, bringing it back into the Senate tugging to be heard, but still on leash.

Whatever the other kinds of criticism such a writer as Mr. Littell may bring to bear upon the Senate, the accusation of mediocrity is not one of them. Many Senators "once seen and heard, stand out from the mass." For instance:

Willis of Ohio, voted by the stenographers the handsomest man in the Senate, modern, still athletic looking tho overweight, with a pitiless voice like the forcible mutilation of sheet-iron.

McCumber of North Dakota, drawn and hook-faced like an Albino Indian, from whose confident chest come long noises of hearty dulness, marred by "s" sounds whispering through the big words.

Brandegee, too high a whistle for so heavy a locomotive. Norris: a pleasant, ungainly figure, a little white and tired,

Can't you recall the famous old nursery jingle that goes —

Ride a cock-horse to Banbury-cross
To see what Tommy can buy;
A penny white loaf, a penny white cake,
And a two-penny apple-pie.

ARE there any folks left who don't know that the most delicious food you can get is right around at your own grocer's?

It's the old story of the Bluebird of Happiness. After searching all over the world for "something good" you may find it right in your own home.

Now, for instance, what is more delicious than Post Toasties—the superior corn flakes—with cream or good milk?

Get the joy of that crispness and flavor from a bowl of these wonderful golden-brown flakes of toasted corn for breakfast—and you find yourself wishing that it could happen once more, and fearing that it won't.

And there you are at lunch again—another bowl of that same delightful goodness. Or at bedtime; exactly the same delicious quality which first made you wonder whether Post Toasties *could* keep on being so *good*.

Keep Post Toasties in the house, for all the family. Let the children have all they want, whenever they're hungry. There are many helpings from a package of Post Toasties, and there's no trouble or waste or delay in serving.

Post Toasties are *different* corn flakes by their own name. To realize all that corn flakes *should* be, order Post Toasties from the grocer—and be sure you get the Yellow and Red package.

Post Toasties

—improved corn flakes

ALWAYS IN GOOD TASTE

THE PREMAX LINE

HARDWARE SPECIALTIES

"25 SUCCESSFUL YEARS OLD"

The "King of Coasters"

PREMAX ROAD-TESTED COASTER

A handsome, strong, durable coaster. Built and tested on the road to give longer and better service.

Selected white ash box, removable. All-Steel, interchangeable undergear. ⅝" cold-rolled steel oversize axles. 10" pressed steel double disc wheels. Special hub and bearing construction. Hard steel roller bearings in pressed steel container. Metal name plate.

Rubber tires ¾" diam. or solid steel, as preferred. Handsomely enameled and varnished.

Size No. 2 26" wheel base—19" axle—Box size 14 x 34"
Size No. 3 30" wheel base—19" axle—Box size 16 x 38"
Size No. 4 32" wheel base—19" axle—Box size 18 x 40"

Packed in individual cartons, knocked down.

PREMAX METAL LETTERS, FIGURES AND HOUSE NUMBERS

The Most Complete Line Made

Embossed Brass and Aluminum

Sizes ¼" to 6" in both letters and figures. 8 different finishes.

Packed in cartons of 20 or in assortment display boxes, complete with pins.

2" aluminum house numbers a specialty.

Also copper and brass milk can letters.

Deluxe House Number Solid Aluminum

A high grade artistic product for better homes.

Number 2½" high stamped into heavy aluminum plaque. Beautiful silvery finish on rich black background.

Packed in cartons of 5 or assortment display boxes, with frames and pins.

PREMAX HARNESS SPECIALTIES

DODSON ALL-STEEL HAME STRAP

Established for 20 years.

The only flat link metal hame fastener. Adjusted instantly like leather strap.

Packed one dozen in an attractive counter display box, with large posters and folders.

A fast-selling article wherever horses are used.

Parkerized Black Rust-Proof Finish.

PREMAX JOCKEY CHAIN

Parkerized Rust-Proof

A very serviceable item with a large field. 10", 12", 15" lengths. With or without swivel. Cut-link chain. Strong spring snaps.

PREMAX PRESSED STEEL SNAPS

Simple, strong, attractive. Sizes from ⅝" to 2". Harness, rope, and swivel patterns. 4 doz. to 12 Doz per box.

Black Rust-Proof Finish

PREMAX BUILDERS SPECIALTIES

Standard Wall Tie

⅛" x 7⅛"

Made of substantial galvanized steel. Won't rust. Scientifically designed to stand breaking strain of about 1000 lbs. 1000 per box.

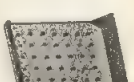
Standard Veneer Tie

7/16 x 3½"

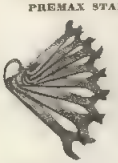
Correctly made. Bent at one end to nail to sheathing. Galvanized steel of rugged strength and security. 1000 per box.

Standard Wall Plug

Galvanized steel. Quickly placed. Two sizes 2½" and 3". Are built into brick walls as base for nailing; also used to attach floor strips to cement floor. Hold nails securely. 1000 per box.



PREMAX STAMPED STEEL WRENCHES



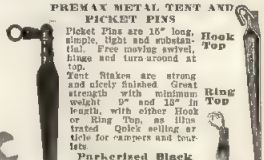
HANDY 8 WRENCH SET

Eight single end steel wrenches on a special ring. Sizes 5/16" to ⅝". Weave nickel-plated finish. Packed one dozen sets in attractive counter display box.

DOUBLE 6 WRENCH SET

Six double end wrenches, sizes 5/16" to 1⅛". Packed in individual cartons. A big value at low cost.

PREMAX METAL TENT AND PICKET PINS



Picket Pins are 15" long, simple, light and substantial. Free moving swivel, hinge and turn around at top.

Tent Stakes are strong and nicely finished. Great strength with minimum weight. 9" and 12" in length, with either Hook or Ring Top, as illustrated. Quick selling article for campers and hunters.

Hook Top

Ring Top

NIAGARA METAL STAMPING CORPORATION

200 TENTH STREET — **NIAGARA FALLS, N. Y.**

illuminate the camp, and then comes to that much-debated subject, the trailer:

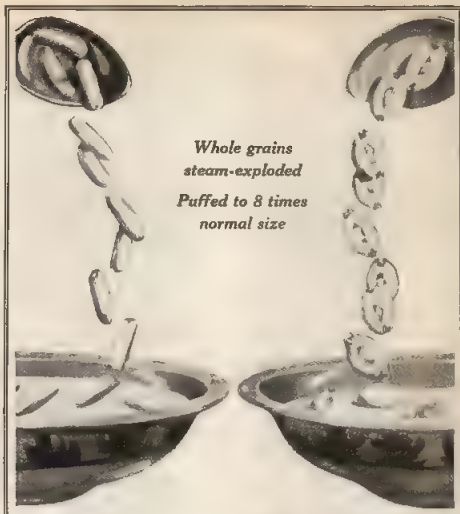
The camping trailer is fitted with two double beds with springs, mattresses and pillows. Over the opened trailer camp is a folding frame supporting a canvas tent. The food compartment and ice-chest is under the floor. Gasoline stove, folding chairs, and the necessary camp conveniences are packed about the trailer. The loaded trailer weighs about eight hundred pounds.

After all, the style of outfit one selects for automobile gypsying is a secondary matter. The first requisite is the philosophy of the campers. Children are natural gypsies and they will be ready as quickly as little Indians. Youth likes the smell of adventure, the charm of new surroundings and the exotic, and as a last resort mature age—perhaps under the disguise of seeking health—feels the same lure to autocamping.

Throughout the West and in the larger cities and many of the towns and villages of the East and South you will find municipal Motor Camping Parks ready for your tent. Denver, Colorado, has set the example for others to follow. Two years ago this city purchased one hundred and sixty acres along the Platte River, and Overland Park is the result. This park has eight hundred camping lots, each twenty-five by thirty-five feet, located so that no camper is more than one hundred and fifty feet from a city water hydrant. Your camp in Overland Park may be lighted by the city electric current. A large, three-story clubhouse in the park is a headquarters for municipal grocery store, meat market, kitchen, grill and lunch counter, steam-heated table from which food is dispensed, billiard-room, barber-shop, reading-room, separate men's and women's lockers and showers. A park garage, filling station, and motion-picture theater offer themselves for the use and recreation of the automobile gypsy. And still there is plenty of shade and real out-doorsy atmosphere in this municipal park, for half of the one hundred and sixty acres are wooded with maples and cotton-woods. Denver is merely cited as a sample of the thousands of Motor Camping Parks in every section, including Canada and our National Forests and Parks.

On long autocamping trips one need never fail to spend the night at a public camping park if he wishes. There are also plenty of other camp sites. Everywhere there are schoolyards offering their welcome. We have camped many nights by permission in farmers' fields or door-yards. Everywhere there will be found along the highway either State or Federal holdings where you are permitted to pitch camp. Your automobile clubs are recognizing the difference between the automobile *tourist*—who pilgrimages from hotel to hotel—and the automobile camper. Hence you will find plenty of data covering camping facilities in any locality. Map-makers and tourist booklet-publishers supply this same information specially prepared for the automobile gypsy. The United States Forest Service, Information Department, Washington, D. C., has compiled the data for service to campers in the National Parks and Forests, mainly in the West, but a few in the East. The chambers of commerce in many cities are giving special instructions or assistance to autocamping. Many of them, like Denver, have established Tourist Publicity Bureaus.

Writing in *Outdoor Life*, Mr. Brimmer goes into detail regarding the camping



One at Night

One in the Morning

Make these all-day-long delights

Puffed Grains are the supreme breakfast dainties. Never was cereal food made half so enticing.

But that isn't all. Puffed Wheat in milk is a matchless dish for luncheon or for supper.

Puffed Rice, crisped and lightly buttered, is an afternoon delight. And on desserts, like ice cream, it tastes like bubbled nuts.

Think what puffing does

Puffed Grains are made by Prof. Anderson's process. They are steam-exploded—shot from guns.

Every food cell is blasted. Over 100 million steam explosions are caused in every kernel.

Digestion is made easy and complete. Every element in the whole grain is fitted to feed.

Thus one gets whole-grain nutrition—16 needed elements. All can be assimilated.

Puffed Grains are tidbits, flimsy and flavory. The texture is like snowflakes, the taste like toasted nuts.

But, above all that, they are scientific foods—the best-cooked cereals in existence.

Let children eat all they will.

The Quaker Oats Company Sole Makers

RADIO!

The first complete home study course in the world's most fascinating subject—Radio.

Through the Radio School of America you can now get a complete and intensely practical Radio course at an extremely low price.

All the information that it has taken experimenters years to discover is presented to you in simple, readable form so that you can easily master it.

The course has been carefully written by the foremost radio experts. It tells just what Radio is and how it works. It explains how to build your own receiving set—and how to *use it properly*. It tells you all about the different parts and accessories and how much they cost. How to operate every style of radio outfit. How to locate trouble and remedy it—in fact everything you should know about Radio.

The entire course, in ten installments, giving you a complete Radio education, is offered at the minimum price of only $10.00

In order to introduce it we are offering the first section of the course at only $1.00.

This section is very complete in itself and gives you a world of practical information about every phase of Radio.

Send for it today—only

$1.00

THIS FIRST SECTION, at a cost of $1.00 covers the following subjects

Essential Parts
The Antenna
Detail of Parts
Tuner, Detector and Phone
Details of Construction
Instructions for Wiring
Directions for Operating
Cost of Building
Symbols
Estimated Cost of Antenna
Questions and Answers
Radio Terms Defined
The Crystal
Testing Trouble in Sets
Locating Signals
Grounding Switch
Care of Head Sets
Useful Information
Slide Tuning Coil Set
Materials Needed

W. L. DOUGLAS

FOR MEN AND WOMEN

$7.00 & $8.00 SHOES

ALSO MANY STYLES AT **$5.00 & $6.00**

YOU CAN ALWAYS SAVE MONEY BY WEARING W. L. DOUGLAS SHOES SOLD DIRECT FROM FACTORY TO YOU AT ONE PROFIT

W. L. DOUGLAS PRODUCT IS GUARANTEED BY MORE THAN FORTY YEARS EXPERIENCE IN MAKING FINE SHOES

They are made of the best and finest leathers, by skilled shoemakers, all working to make the best shoes for the price that money can buy. The quality is unsurpassed. Only by examining them can you appreciate their wonderful value. Shoes of equal quality cannot be bought elsewhere at anywhere near our prices.

Our $7.00 and $8.00 shoes are exceptionally good values. W. L. Douglas shoes are put into all of our 108 stores at factory cost. We do not make one cent of profit until the shoes are sold to you. It is worth dollars for you to remember that when you buy shoes at our stores YOU PAY ONLY ONE PROFIT.

No matter where you live, shoe dealers can supply you with W. L. Douglas shoes. They cost no more in San Francisco than they do in New York. Insist upon having W. L. Douglas shoes with the name and retail price stamped on the sole. Do not take a substitute and pay extra profits. Order direct from the factory and save money.

W. L. Douglas name and portrait is the best known shoe Trade Mark in the world. It stands for the highest standard of quality at the lowest possible cost. The intrinsic value of a Trade Mark lies in giving to the consumer the equivalent of the price paid for the goods.

INVESTMENTS AND FINANCE
Continued

tariff, others as a result of mergers. Sometimes a Canadian business in a tight corner has turned to American capital or management for help; sometimes the American industry has taken the initiative. The Canadian writer goes on to show the extent to which American capital has taken over certain industries in Canada.

One is not surprized to learn that the motor-car industry is largely in American hands. Of its capital 91 per cent. is American, 19 per cent. Canadian, not a dollar British. Motor-car accessories is 93 per cent. American.

It is more surprizing to learn that the large and indigenous meat-packing industry was 41 per cent. owned in the United States. The proportion to-day is larger.

In the rubber industry 50 per cent. of the stocks and bonds representing ownership is American, 10 per cent. Canadian, 3 per cent. British, 8 per cent. other countries.

In railway-car construction 54 per cent. is American, 46 per cent. Canadian.

In petroleum refining 53.1 per cent. is American, 46.7 per cent. Canadian, one-fifth of 1 per cent. British.

In lumbering, oldest and most profitable of Canadian industries, Canadians retain only 61 per cent., Americans hold 27 per cent., and British 11 per cent.

In pulp and paper concerns Canadians own 68 per cent., Americans 24 per cent., British 4, and other countries 4.

In electrical apparatus 49 per cent. is American, 36 per cent. Canadian, 12 per cent. British, 3 per cent. other countries.

And so on through the whole list. One estimate is that there is from $700,000,000 to $800,000,000 of American capital invested in Canadian industry. Some might put the figure at an even billion.

SWITZERLAND'S EMBARRASSING RICHES

MR. H. G. WELLS once set out to prove the fallacy of the proverb. "In the country of the blind the one-eyed man is king,' by telling of the wretched plight of an adventurer into an Andean valley inhabited by a blind tribe. Switzerland offers a similar proof that it does not make for happiness to be the only solvent country in a continent of near-bankrupts. Alone among the European nations, we read in a Paris letter to *The Wall Street Journal*, "Switzerland has the distinction of a currency a gold parity, the Sweden is running close." But, it seems, "she is as unhappy as any country in Europe, with the exception of Russia." The foreign tourist and the foreign buyer alike stay away because Switzerland "is too expensive to live in and too expensive to buy in." Things are said to be so bad "that Swiss manufacturers actually find it worth their while to migrate, lock, stock and barrel, to southern Germany and eastern France." Prospects for this year are far from bright, according to *The Wall Street Journal's* correspondent. "Save for a few orders from countries with undepreciated cur-

sport of tree-cutting, covering as it does, the seven ages of man, from the youth of Washington to the old age of Gladstone. One may picture the whilom Kaiser going forth with eager strides, battle-ax in hand, to slay the oncoming cohorts of the Allies as represented to his distorted mind by the serried ranks of the Dutch beeches, he being arrayed erewhile in the majesty of Dutch breeches, and as he "strafs" and "strafs" one may almost hear him mutter between clenched teeth, "take that and that and THAT," very much as one might chastise a most obstreperous boy in the woodshed!

But it a poor tree that does not grow both ways, and in Jobathan's parable (Judges IX, 8), we read: "The trees went forth on a time to anoint a King over them." One after another, however, all declined as being otherwise more usefully employed in growing roots and branches and so they finally were reduced to electing a bramble!

A fondness for the sport of tree-felling leads one naturally to an interest in forestry and to observation of the habits, forms and varieties of individual trees, their rate of growth, their relations to each other in their struggle upward to the light and air in densely covered areas, and further to their economic value and the specialization in the uses of the different kinds of wood.

Each species of tree in addition to general uses such as those of firewood, boarding, etc., has one or several special uses for which it is peculiarly fitted. These oftentimes are suggested on cutting down the tree through noting its relative hardness, its graining, mode and degree of splitting, etc. Thus the chestnut is selected for the framework of pianos and coffins to be veneered afterward with other woods which take a better polish. The willow is used in manufacturing black powder and artificial legs, the poplar for fruit-boxes, spools etc. Moreover, each tree is its own biographer, and the cross-section of even a long-time cut and decaying stump presents an open page to one who has learned to read it. From the bark and grain of the wood is to be told the species and from the number of concentric rings the age, for the growing tree must form a new ring each year. More than this, the thickness of the rings varies with the seasonal conditions of light, air-currents and moisture, so that under exceptionally favorable conditions the rings may be two or three times the average width. In illustration of this is the following incident: One day while crossing a recent clearing in a New England forest I noticed an exceptionally large stump cut quite close to the ground. Its bark and graining, porosity, etc., showed it to be the remains of a giant tulip-tree with 119 rings, indicating an unusual age for a forest tree of that species in that locality. But counting back thirty rings from the margin was one which was more than double the width of the others. This meant that in some manner in that year the tree had had access to more than its usual share of light, air-currents and moisture, and it was easy to guess that thirty years before the lot had previously been cut over. Coming down the mountainside I met the son of the old man that originally owned the forest. "Jim," said I, "when was that lot cleared?" "Oh, a couple of years ago." "Any one could see that," I said, "but when before then?" for, like almost all New England forests, it had been cut over several times. At first he could not recall, but suddenly he said: "It was the year my father bought the farm and the first thing he did was to clear that lot." "But when was that?" "Thirty years ago." And thus came the proof that the old giant had written its biography correctly.

And thus came the proof that the old giant had written its biography correctly.

rencies like Japan, and certain South American states, there is no sign of better trade abroad." The cost of living remains high. In fact, it is about where it was a year ago. As Swiss money gets dearer, and German and Austrian currencies get cheaper, the competition of cheaply made foreign goods becomes more and more overpowering. "Thus the country stands isolated and cold-shouldered. There is a two-thirds gold reserve behind its notes, and actually gold is reappearing in common currency. But it is the gold which is its curse." The tale of 1921 now being published "makes sad reading":

In weight the export trade is little more than half that of 1913. Sales of silk goods have declined by 50% and of embroideries by 77%. The value of watch parts exported for the first nine months of the last year was 126,000,000 francs only, against 244,000,000 the year before. There is a noteworthy slump also in sales of machinery, cotton goods, straw goods, condensed milk, and even aniline dyes. Germany, Poland, Italy, Austria and the Balkan States, which were Switzerland's best customers, are wholly unable to purchase in large quantities, save the cheapest of Swiss products, and where Swiss articles come into competition with similar articles produced by these countries where wages are much lower, they have no chance.

The farmer is suffering equally with the manufacturer. During the war he made good money, since the country was thrown on its own resources, but when prices began to decline the farmer found he could no longer sell his live stock abroad, owing to the exchanges. An epidemic of foot-and-mouth disease combined with increase in agricultural wages to accentuate his distress, and soon he suffered from decline in the demand for milk from chocolate and condensed milk manufacturers, owing to their difficulty in maintaining sales abroad. Finally cattle and meat began to come into the country under favor of the exchanges. For a similar reason the wine-growers began to feel the competition of foreign wines.

German and French competition with Swiss articles in Switzerland itself grew so formidable that in the end Parliament had to abandon the traditional policy of a low tariff and the rates were raised and various imports were forbidden or restricted. It was hoped thus to preserve the home market for home producers, to check unemployment and to obtain more revenue for the Treasury. But the new rates had the effect of stopping the decline in prices also and thus prolonging the difficulties obstructing the export trade. Nor did they reduce unemployment.

Last January the "out-of-works" registered 97,000 out of a population of less than 4,000,000, having increased during the month by 7,500. In the metal industries alone there were nearly 30,000 men out of work, and in the cheap watch and jewelry trade 26,000. A further 50,000 people were working half-time, making 147,000 victims of the depression.

Government finances show a mounting deficit from year to year. It has been expensive to demobilize the Army, to keep down food prices and to relieve unemployment, and ever since 1914 the history of the state-owned railways has been one of "successive deficits despite repeated increase of rates."

How Large is Your Lawn?

Many people are surprised at the big saving they can make by caring for their lawns with power mowers. Even those with medium sized lawns can now afford to use a power mower.

The Ideal Junior for Medium Sized Lawns

The Ideal Junior is a small, moderate priced power mower designed and built especially for lawns where there is too much grass to cut conveniently with hand mower yet where the lawn is hardly large enough to warrant the purchase of a large machine.

It is a pleasure to operate. There are no levers and only two parts to adjust. You can cut close to the edges and around trees and shrubbery without trouble. The grass cut may be caught in a grass catcher or left on the lawn as desired.

[illegible] work. It cuts [illegible] and clips [illegible] under [illegible] cuts [illegible] and [illegible] hand mowing [illegible] with hand mowers.

The 30" Ideal for Extra Large Lawns

The 30" Ideal Power Mower is the best known and most widely used power lawn mower on the market. From coast to coast and in many foreign countries these machines are used by large estates, public parks, schools, railroads, golf clubs, cemeteries, golf parks, hospitals, etc.

They are wonderful labor-savers and keep the lawn in finest possible condition.

[illegible] to obtain speed and [illegible] lawn to [illegible] write us about them at once. You will be surprised at the [illegible] save you [illegible] money.

If you want our suggestion, tell us something about your lawn, its size, amount of shrubbery, etc. At least write us for our book which tells you how to give your lawn better care at less cost.

Ideal Power Lawn Mower Co.

IDEAL Power Lawn Mowers
The Ideal rolls as it cuts—keeps the lawn smooth and firm

Rodd Floors of California Redwood Blocks

Clean—Odorless—Stay Smooth

THE usual objections to wood block floors include the pungent odor of coal tar and creosote, stickiness when warm and a tendency to shrink under heat and to swell and buckle when they're wet.

These objections are absolutely eliminated in Rodd Floors of California Redwood Blocks which are permeated during the growth of the wood with a *natural*, odorless preservative. Redwood blocks are absolutely free from pungent, artificial preservatives.

Redwood contains no pitch or resin—is not sticky.

Rodd Floors stay flat. Every Redwood Block is air seasoned, then kiln dried by the patented Leaver process. The floors are light in color, easy to keep clean and absolutely water tight.

While generally used in mills, foundries and factories, the cleanliness of Rodd Floors and their lack of odor makes them available for stores, offices, hospitals, schools, libraries, creameries, food warehouses, textile mills, etc., where the odor, the stickiness or the danger of swelling and buckling rules out other types of wood block floors.

Rodd Floor Engineering Service

The Rodd Company is prepared to undertake the complete installation of floors and materials. Our eight principal Rodd Specifications providing floors designed to meet every type of service will be sent to architects, contractors or those planning to build.

family on the rocky ledge. The day was oppressively hot, and there was the smell of smoke in the air, for there had been forest fires not far away. The drowsiness of the heat crept upon him, and he slept there by the spring, in the cool grotto where the water trickled over the rock and down into the hollowed-out cup. He was awakened by the sinister crackle of flames licking along dried limbs and clambering up hemlock trunks. He leaped to his feet and stood dismayed. For all about him the woods were aflame. Fire was creeping like a glowing serpent over the dried leaves on the ground, sucking them in, reaching up to grasp at huckleberry bushes and thorn trees. Sweeping up the trunks of pines and spruce trees, leaping from branch to branch, roaring in an abandon of destruction.

The hot flames scorched his face, and the smoke, driven in stifling hot eddies, drove him back into the meager shelter of the grotto. He threw himself flat on the ground and buried his face in the coolness of the spring. He dashed the water over his body, trying to shield it from the falling sparks and flaming cinders blown by the wind. In the brief moments when he raised his face from the hollowed-out cup, trying to catch a breath of air for his aching lungs, he saw wild things of the woods rushing past him, utterly terror-stricken, blind with panic, crazed by pain. A rabbit leaped past him with brown fur that was singed by the flames. It stopt irresolutely, turned, and with the fierce roaring of the flames close before it, hopped back into the smoking underbrush.

All thought of escape left him, Mac said. The heat became more intolerable. Burning brands fell on him, smoking, sizzling on his wet clothing, boring through to the skin. The smoke filled the air with a thick, gray haze, and his breath came in panting sobs. The only instinct left was to keep his face in the cool water, to draw his body as far into the grotto as he could.

And then, as he lay face downward, he felt a heavy body cross his, and raising his head, he saw the lady wildcat. In her mouth she was carrying one of her cubs, and it was half dead from the smoke fumes. She herself was burned, and there was a long, raw scar across her shoulder where a blazing branch had fallen. Her eyes were glazed and almost unseeing, and she staggered panting against the shelter of the rocky wall.

"Then," said Mac, "she looked at me—*she knew me.* And when I rose to my knees, having some sort of a thought that she was going to attack me, she dropt the cub right in front of me and stood there for just an instant, looking me straight in the eye. It was as if she was asking me to mind the baby a minute while she went for the other one. And she *did* go for the other little fellow, away over on that stone ledge of hers—she walked out into the flames just as if they weren't there—and she never came back."

They're All Wrong Somewhere. A former M. P. confessed that, altho he was always forgetting their faces and never remembering their names, he had no difficulty in being pleasant to his followers in the House.

"When I meet somebody in the lobby whom I don't know from Adam, and I see he expects me to know who he is, I take him warmly by the hand, look straight into his eyes, and say, 'And how is the old complaint?' I have never known it to fail."—*The Epworth Herald (Chicago).*

TYPEWRITERS

This inhuman exhibition, which outrages all the finer feelings of civilization, can go on no longer!" It was at first supposed that the would-be interrupter was some reformer, but inquiry revealed that the outcry had burst from the heaving breast of no less a person than Painless Parker the Dentist.

The bell saved both men from defeat, and panting and weary they dropt the teeth and were wheeled to their corners for a rest of two hours. The referee was bitten six times when he tried to pry the teeth apart, and they fought for twenty minutes in the ring before they could be separated.

Round 3—When called by their room clerks for the third round both old men were considerably refreshed by their slumber, but both were in an ugly mood. It was evident that they had had bad dreams.

Dempsey at once created a sensation by rising from his wrecked chair and tottering toward the feeble Wills, with his right hand raised high in the air. The crowd cried: "The rabbit punch! The rabbit punch!" Wills, adjusting his glasses, saw the champion's rush just in time, and raised his right arm to parry the blow. But each had overestimated his strength. Dempsey lost his right leg in the Moving Picture riots of 1969, and his seconds, thinking he would never attempt to get out of his chair, had strapped his wooden leg on very carelessly. As he towered over Wills the artificial leg came off and he fell. His right hand descended. But the blow hit the artificial right arm of Wills, who lost his real arm in 1971, and knocked it loose from his shoulder. Both pugilists and the two artificial limbs rolled helpless on the floor, and the referee, after counting them all out, declared the battle a draw.

THE *MAYFLOWER* AGAIN BARRED FROM THE FISHERMEN'S RACE

OCTOBER brings another bout between fishing craft of the United States and Canada for the International Fisherman's cup; and once more, the Boston schooner *Mayflower*, specially designed and built by a syndicate to bring back the cup now held by Canada, has been barred from the races. Once more, also, the fishermen of Gloucester are rejoicing that the Boston boat will not be permitted to race, since this will probably give Gloucester the honor of trying conclusions with the Halifax fishermen for the championship of the North Atlantic. There is a good deal of hard feeling in Boston, where the syndicate which built the *Mayflower*, represented by W. Starling Burgess, the designer of the schooner, has been strongly stating its opinion that the Boston boat comes within the requirements. The Boston *Herald* remarks that an interesting point, in connection with the personnel of the board of trustees who barred the *Mayflower*, is that some of them are shareholders in the *Bluenose*, the Halifax boat which beat the best of the Yankee crafts last year and will endeavor to repeat within the next few weeks. The American Race Committee, after protesting against the barring of the *Mayflower*, has suggested that, as an alternative to the regular cup race, a "free-for-all" race be put on this year, on the chance that the terms under which the cup is raced

There is a true Aristocracy in all the works of man, some being flimsy and poor and others good and satisfying.

The Royal Typewriter is so called because it is Royal; Royal by the best right and title—that of Quality.

The true meaning of Aristocracy is "the rule of the best."

And in the only true Aristocracy—the Aristocracy of Achievement—the best is the Royal.

TYPEWRITERS

The town itself has many interesting old houses, including the Hop Pole Inn, at which Mr. Pickwick dined on his memorable journey from Bristol to Birmingham, in company with Mr. Ben Allen and Mr Bob Sawyer

The old Norman Abbey Church is one of the stateliest buildings in the West County, and contains the tombs of many great men, including that of George, Duke of Clarence, who, condemned to death for high treason, was allowed to choose the form his end should take, and, in accordance with his choice, was drowned in a butt of malmsey wine—or so tradition says.

The trip down the Thames began in the upper reaches of the famous river, where weeds so filled the tiny stream as to make paddling almost impossible. The paddlers dropt down to Henley, famous wherever boat-racing has been heard of. Mr Evans writes:

Henley is a quiet little place for fifty-one weeks in the year; but for one crowded week in July it is the scene of the first river regatta in the world

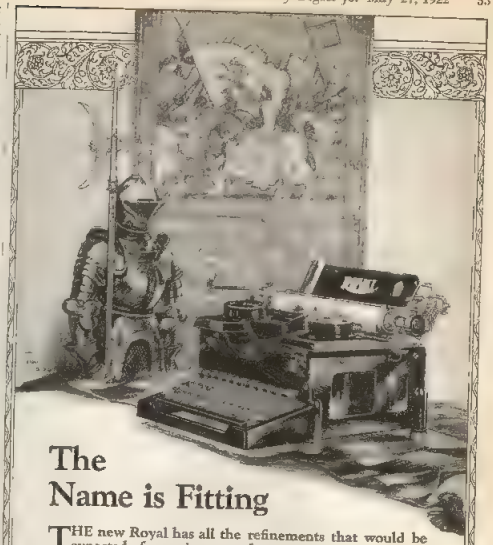
The whole scene is a glorious riot of color, health, and sunshine, while in the middle is the cool green water, broken only by the racing-boats coming swiftly up the straight, accompanied by an ever-growing roar from the partizans on either side. To be a member of the crew which wins the Grand Challenge Cup at Henley is every oarman's ambition and is a feat which entitles him to a place among the immortals

THE AMERICAN INDIAN'S WARPATH ON DIAMOND AND GRIDIRON

LOUIS SOCKALEXIS—a name, it will be observed, with a punch in it—lugged his Penobscot Indian war club into our national game, back in 1897, and started in "to whale the scalps off the paleface pitchers of the baseball world." About that time, also, the Carlisle Indian School began to pick twigs and leaves from the laurel wreath that adorned the "classic brow of the then exclusive Big Four of the college football world." Ever since that time, remarks Jim Nasium—who also has an interesting name if you say it as one word—in *Sporting Life* (Philadelphia), the American Indian has been making more noise in the sporting world than the small number of him still left in the American body politic would seem to justify. The *Sporting Life* writer recalls and ruminates:

Years after the plowshare of the paleface had wrecked the hunting grounds of his ancestor and shoved his hare back up against the wall, a reincarnation of the racial proclivities for craft and deeds of valor in open-air sports has arisen Phoenix-like from the lethargy of the passing years and the remnants of the dying race are blazing a trail through the favorite sports of the paleface.

Baseball annals contain no names that have achieved more prominence than those of Bender, the Chippewa; Myers, the Mission Indian, and Sockalexis, the Penobscot; the football world has never known such sensationally consistent teams as those representing the Carlisle Indian School, while the names of Hudson, Mt. Pleasant, Cayou, Pierce and the great



The Name is Fitting

THE new Royal has all the refinements that would be expected of an aristocrat of typewriters. Its title has been earned, not inherited. It is self-made. Though mute, its actions are unmistakably those of a thoroughbred. It can't help being somewhat exclusive, for masterly craftsmanship has given it true distinction.

There's a poise and dignity in the outward appearance of the new Royal that bespeak a fine character within. The cleanness and uniformity of its typing unconsciously suggest good taste, discrimination. Its marked quietness makes it a good companion for concentration. It has a respect for the feelings of others.

The Light-Running, Quiet-Running Royal combines the strength and durability of a fine machine with the responsiveness and accuracy of an instrument—the achievement that makes its name so fitting.

Our fifty-six page book, "The Evolution of the Typewriter", beautifully illustrated in color, will be mailed free on request. Address Department D.

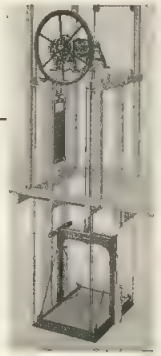
There Is Profit for the Dealer in Sedgwick Dumb Waiters

You don't have to go out and sell them. Your regular customers—the contractors and builders who buy Builders' Hardware—are all live prospects. They are the very ones who install them. The simplicity and ease of erection of Sedgwick Elevators and Dumb Waiters cannot fail to appeal to them. Their value as an improvement and convenience in the home and other buildings cannot be questioned.

And you can sell them *without investment of a single dollar*—you carry no stock—simply sell from our Catalog and Service Sheets, which give complete information. From this data you can select a size and type to suit every need. We ship from stock direct to your customer and furnish him full instructions for erection.

It is no trouble for you—all you do is send the order and collect the profits. Do not overlook this sales opportunity. Write now for the details of our plan.



HAND POWER ELEVATOR

INVALID LIFT

DUMB WAITER

—And as to the Products Themselves

The dealer is protected by a 5-year guarantee on every Sedgwick Dumb Waiter Machine. They are the product of 25 years' specialized experience, they have stood the test of service, they are well known to architects and builders. There is an outfit exactly suited to every requirement. There are:

Dumb Waiters of all kinds, Fuel Lifts, Gravity Lifts, Hospital Elevators, Automobile Elevators, Invalid Elevators, etc., etc.

STEINWAY

The Instrument of the Immortals

Richard Wagner

"A Beethoven Sonata, a Bach Chromatic Fantasie, can only be fully appreciated when rendered upon a Steinway Grand," said Richard Wagner in 1879.

"Only upon a Steinway can the works of the masters be played with full artistic justice," said Sergei Rachmaninoff in 1921.

The price of happiness

—*a thought for Christmas*

It is the way with art that those who know and love the best can find no happiness in that which is other than the best. And therefore, to own a piano is one thing—to own the Instrument of the Immortals is another. For when you buy a piano you do not buy a thing of wood and steel, of wires and keys—it is music that you buy—the greatest of the arts.

Once your fingers touch the keyboard of a Steinway—once you know the eloquence of its response—once you drink the beauty of its tone—for you henceforth there can be no other piano.

Think! The Steinway is the piano over whose keyboard Richard Wagner dreamed his visions and enriched the world. It is the Voice with which Liszt, Gounod, Rubinstein and their immortal fellows spoke to mankind.

It is the piano of Paderewski and the piano on which Rachmaninoff and Hofmann are playing their way to immortality to-day. From the day of its coming it has been the chosen instrument of the masters and the lovers of great music.

You who find happiness in the music of the Immortals—surely you can find happiness only in the Instrument of the Immortals. And the price of this happiness is less than you may think. Steinway & Sons and their dealers strive constantly to make it so easy that there is no thought of burden. For it is the Steinway ideal to make the finest piano that can be made, and to sell it at the lowest cost and upon the most convenient terms that can be made.

Would you not be happier for possession of a Steinway? And could there be a time more fitting for its coming than this Yuletide of the year?

There is a Steinway dealer in your community or near you through whom you may purchase a new Steinway piano with a cash deposit of 10 per cent, and the balance will be extended over a period of two years. Used pianos accepted in partial exchange.

Prices: $875 and up—plus freight

There are several Steinway styles and sizes, but only one Steinway quality

STEINWAY & SONS, *Steinway Hall, 109 E. Fourteenth Street,* New York City

CURRENT EVENTS

FOREIGN

April 12.—Announcement is made that an earldom has been conferred on Sir Arthur James Balfour, former British Premier and at present Lord President of the Council.

The Prince of Wales arrives in Tokyo on a visit to Japan

April 13.—The Reparations Commission informs the German Government that if it does not take the necessary measures to put German finances in order the Commission will be obliged on May 31 to exact penalties.

A parley between Republicans and Free Staters results in a formal statement expressing the hope that there will be no further interference with public meetings in Ireland.

Sir Ross Smith, the Australian aviator who, with his brother, Sir Keith Smith, made the first flight from England to Australia in 1919, is killed in a test flight in England.

April 14.—Mutineers of the Irish Republican Army seize the building of the High Court of Justice in Dublin and the adjoining hotel.

April 15. The Russian delegates to the Genoa Conference ask for the immediate payment of 2,000,000,000 gold francs, as part of the debt they allege the Allies owe Russia because of the backing given by them to Denikin, Kolchak and Wrangel. Premier Lloyd George replies that Russia must first recognize her own liabilities.

"America has broken the back of the biggest famine in the world's history," is the Easter message sent to America by Walter Lyman Brown, European Director of the American Relief Administration in Russia.

April 17.—Michael Collins, head of the Irish Free State Provisional Government, narrowly escapes assassination at the hands of six men, and himself wounds one and captures another of his assailants.

Dr. Walter Rathenau, German Foreign Minister, informs the Genoa Conference that Russia and Germany have signed a separate treaty of peace and commerce, reciprocally renouncing reimbursement of war expenses and war damages and immediately resuming consular and diplomatic relations.

Hazrat Mohani, President of the All-India Moslem League, is arrested at Cawnpore, India, on a charge of sedition.

April 18.—Backed by Poland and the Little Entente, the Allies, in a joint memorandum, notify the German delegates to the Genoa Conference that because of their treaty with Soviet Russia they will not be permitted to take further part in conference proceedings when relations with Russia are under discussion.

Jemal Azmyk Bey, former Governor of Trebizond, and Bahaeddin Chakir, a leading member of the Turkish committee of Union and Progress, are slain in Berlin by Armenians.

DOMESTIC

April 12.—A resolution proposing endorsement of the Jewish national home in Palestine, in accordance with the Bal-

More Mileage at Less Fuel Cost

STROMBERG SERVICE STATION

For Any Car Any Size—Old or New

THE foremost item to consider in the upkeep of your car, is fuel consumption. Are you getting every ounce of energy from the gas you buy? There is a way, the New Stromberg Carburetor makes a slave of the gas—gets a "full day's work" from every drop—makes a gallon go farther. It means actual economy through the saving of fuel.

A substantial saving, a noticeable increase in efficiency of operation and additional power is evident where the Stromberg is installed.

New STROMBERG Does it! CARBURETOR

UNIVENT

"LIVE OUTDOORS—INDOORS"
(TRADE MARK)

Exhaust vitiated air from the room

Fresh heated air from the window

Not only Better Ventilation, but Lower Building Costs

The Univent system is your Ideal ventilating system. It is as simple and more positive than opening wide the windows—but without the cold and dangerous draft.

The Univent draws air directly from outdoors, heats it and thoroughly diffuses it throughout the room.

The Univent heating and ventilating system does not use uncleanable ducts or flues. Thus, more sanitary ventilation is provided and building costs are lowered, and space is saved.

Each room is heated and ventilated, as a unit by itself. Open windows or other conditions in other parts of the building do not affect its perfect operation.

Only the Univent in the room in use, need be operated. It is not necessary to operate the whole ventilating system to ventilate two or three rooms. This means economy. It is the most flexible system known. Insures fresh, pure air, perfectly diffused.

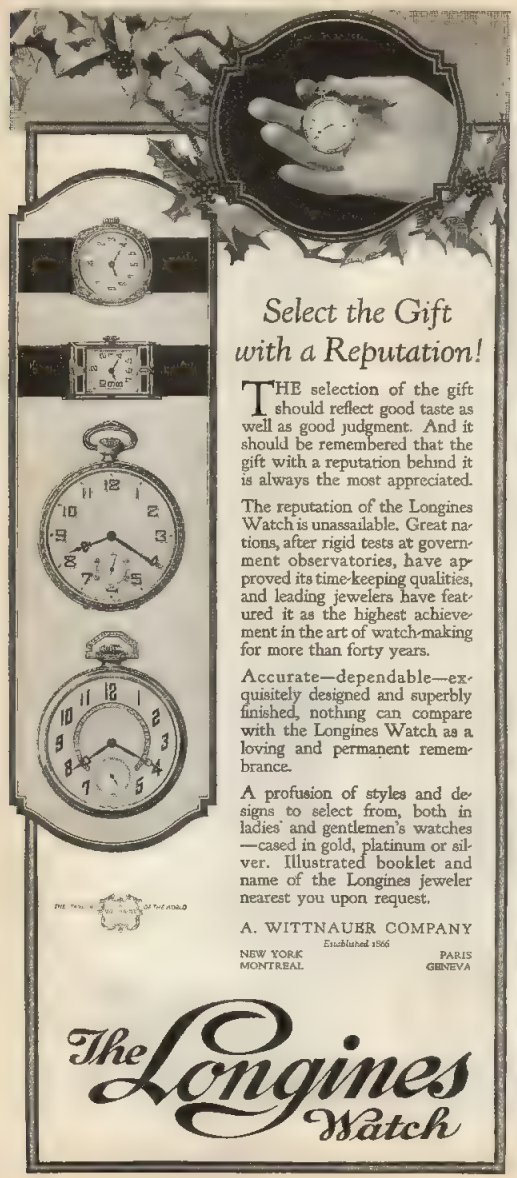
The Univent system is designed for schools and all buildings requiring mechanical ventilation. It may be installed in old or new buildings.

School board records show as high as 33⅓% increase in mental efficiency of pupils and 1/3 decrease in sick leave after good ventilating systems have replaced inferior ones.

If you are truly interested in better ventilation, write for free copy of our 32-page illustrated book—"Univent Ventilation."

Note to Architects and Engineers—If you will send your request on your professional letterhead, you will receive a copy of our special 72-page Architects' and Engineers' edition—"Univent Ventilation."

THE HERMAN NELSON CORPORATION, Dept. L, *Moline*, Ill.



PERSONAL GLIMPSES
Continued

Pennsylvania State Constabulary, organized by Major John C. Groome in 1905, still in existence, having done splendid work from the beginning. The next to be formed was the New York State Police, in May, 1917. Now Michigan, West Virginia, Colorado, Massachusetts, New Jersey, all have State police or are organizing it, and the movement is growing throughout the United States.

Life is a strife—a battle—and certain basic principles of combat, which have been developed through centuries of military study, must be applied to it just as to every other kind of warfare.

These principles apply to individuals who are fighting for personal success, and apply equally well to organizations which are fighting for successful development. So, too, they should be adhered to in the administration of a successful police force.

These military principles are nine in number.

(1) There must be one supreme commander.

(2) There should be one simple direct plan.

(3) The force must not be dispersed.

(4) If a detachment is sent for a particular purpose, enough should be sent to accomplish the mission and return intact to the main body.

(5) A reserve must be kept.

(6) Reserves must be used properly and at the proper time.

(7) Fire superiority must be maintained.

(8) Flanks must be protected at all times.

(9) Constant reconnaissance must be maintained.

These principles have come down through centuries, and are the basis of every successful command and of every successful organization, either civil or military.

The main object of any police force, according to the writer, is to prevent crime rather than to find the guilty person after the crime has been committed. However, if a crime has been committed, the surest way to prevent the commission of others is to find and arrest the perpetrators right away. Good detective work, in Mr. Chandler's opinion, consists in paying attention to the obvious, natural clues. Complications may be introduced in "detective stories," but generally, in real life, the simpler the clue, the more likely it is to lead to results. He writes:

There is a saying, "Truth is sometimes stranger than fiction," but on the other hand, fiction is much more complicated than truth. In a detective story it is always the most unlikely person who commits the crime. The author covers up his trail with far greater care than a real criminal does, and the reader must guess the outcome by ignoring most of the evidence. In real detective work it is usually the most likely person who is the guilty one, altho finding him may be difficult enough.

For example, the principals in a hold-up near Syracuse were found and arrested by tracing carefully the whereabouts of a Ford car painted bright yellow. Who would have thought that criminals would

THE SPICE OF LIFE

WHEN THE BABY OF *THE DIGEST* COVER GREW UP

In the upper left-hand corner is a copy of the baby picture which appeared on the cover of the March 16 issue of THE DIGEST. It had the strange effect of starting the pencils going in all parts of the country and the other pictures represent the ideas of various subscribers of what the baby may look like a few years from now. In all of the designs the original baby head, it will be noticed, has been cleverly utilized to produce different effects. Nothing, said or pictured here, of course, is intended to encourage aspiring young artists to start a contest in caricaturing DIGEST covers!

Preparedness.—"Can you fight?"

"No!"

"Come on then, you scoundrel!"—*Kasper (Stockholm).*

One Editor Owns Up.—Don't forget that the advertisements often contain the most important news in the paper.—*The Paonian (Paonia, Colo.).*

Seeing Things.—Some one in America claims to have seen a blue caterpillar. There are bound to be these troubles so long as prohibition drives people to home-made whisky.—*London Opinion.*

Both in the Swim.—"My daughter sprang from a line of peers," said the ardent father.

Well," said her feller, "I jumped off a dock once myself."—*The Naval Monthly.*

Years of Discretion.—"I asked you to send me young lettuce."

"Yes, ma'am. Wasn't it young you got?"

"Young? It's almost old enough to wash and dress itself."—*Boston Transcript.*

Mixed Feet.

A tree toad loved a she toad
That lived in a tree;
She was a 3-toed tree toad,
But a 2-toed tree toad was he.
The 2-toed tree toad tried to win
The she toad's friendly nod;
For the 2-toed tree toad loved the ground
That the 3-toed tree toad trod;
But vainly the 2-toed tree toad tried—
He couldn't please her whim;
In her tree toad bower, with her V-toe power,
The she toad vetoed him.
—*The Van Raalte Vanguard.*

Why Not?—The name of the Los Angeles suburb where the film stars star is Holly-wood. It is not yet intended to alter it to Alcohollywood.—*London Opinion.*

Two Definitions.—Optimist: Sick man learning to play a harp.

Pessimist: Sick man learning to shovel coal.—*N. E. A. Service (Cleveland).*

No Comeback.—Carpentier is said to have taken to writing poetry. That's the best of being a heavy-weight boxer—you can do practically what you like, with impunity.—*London Opinion.*

We Take Ours Plain.—Americans are angry because their Ambassador attended the Royal wedding in court dress. They are so truly refined that they can not understand our preference for breeches of decorum.—*London Opinion.*

No Return Trip.—Sending out a show by wireless has this advantage: If it gets stranded the actors don't have to walk a thousand miles to get back to New York.—*Charleston News and Courier.*

When One Claim Adjuster Fainted.—Out in Wyoming a train ran over the cow of a Swede farmer named Ole Olesen. The claim adjuster went out to the home of Ole to adjust the claim likely to be made by Ole for the loss of his cow.

"Well, Mr Olesen," said the claim adjuster, "I came out to see you about your cow being killed on our track. What are you expecting to do about it?"

"Vell," said Ole stohdily, "I ban a poor man, an' I can not do much because I ban so poor, but I will try to pay you five dollars."—*Judge.*

No Chance.—"What were your father's last words?"

"Father had no last words. Mother was with him to the end."—*Wag Jag.*

Keeping Them In.—DOORKEEPER to late-comer at village concert)—"No, madam, I dare not open the door during the singing. Half the audience would rush out!"—*London Opinion.*

Agreeable.—"If I lend you ten dollars, what security will you be able to give me?"

"The word of an honest man."

"All right, bring him along, and I'll see what I can do for you."—*Banther.*

The Helpful Recruit.—"You told me to file these letters, sir," said the new yeoman.

"Yes," returned the officer.

"Well, I was just thinkin' that it'd be easier to trim 'em with a pair'of scissors."—*Mississippi Bulletin.*

Wife to the Rescue.—YOUNG DOCTOR—"My Jove! Mary, this sitting around waiting for a practice is getting on my nerves."

DOCTOR'S WIFE—"Couldn't we invite the neighbors to dinner and give them something that would disagree with them?"—*London Opinion.*

Competitors.—Two little English girls were quarreling over the success of their fathers.

"My father can preach better than yours because he is a bishop," said the first.

The second little girl could not answer her back, but she suddenly recovered and said: "Well, anyhow, we've got a hen in our yard which lays an egg every day."

"That's nothing," said the bishop's daughter; "my father lays a corner-stone every week."—*The Van Raalte Vanguard.*

THE LEXICOGRAPHER'S EASY CHAIR

To decide questions concerning the correct use of words for this column, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter

Readers will please bear in mind that no notice will be taken of anonymous communications.

"L. B. U.," Cleveland, O.—"(1) I have been informed by a Case School graduate that it is just as proper to say 'I will *learn* you' as it is to say 'I will *teach* you.' Is this expression considered correct, and is it now being taught in the public schools? (2) Is it proper to say 'I et (ate) my dinner?'

(1) Dr Vizetelly in his "Desk-Book of Errors in English" says:—"*Learn, teach:* Once *learn* was good English for *teach*, and signified both the imparting as well as the acquiring of knowledge Examples of this use may be found in Shakespeare (*Romeo and Juliet*) and the Book of Common Prayer, but general modern usage restricts *learn* to the acquiring and *teach* to the imparting of knowledge." (2) The correct pronunciation of the word *ate* is "et" according to the New STANDARD DICTIONARY, the New English (Oxford University) Dictionary, the Century, and Stormonth. The pronunciation 'eight'" was that advocated by Noah Webster and Joseph Worcester in the first half of the nineteenth century (1828-1829)

"E. D. P.," Durham, N. C.—"Recently I heard some one use this expression concerning an article of food served for dinner: 'These *cabbage* are good.' Upon being corrected, he defended his use of the term by saying that a farmer will say of his crop 'My cabbage are a failure' and the grocer, upon opening a barrel of cabbage, will say 'These cabbage are defective.' I contend that both the farmer and the grocer are incorrect as well as the person who used the original expression. Will you please settle the matter for us?"

The correct plural of *cabbage* is *cabbages*. *Cabbage* is not one of the nouns that retain the singular form unchanged in the plural like *deer, fish* and *sheep*. A farmer may say, "My cabbage are a failure," and a grocer, "These cabbage are defective' exactly as many folks who know better say "Yep," "Yah,' and "Yis" for *YES*, but that does not make the use correct. The word *cabbage* dates from the fifteenth century. Its first use in the plural dates from 1440 when the word was spelled *cabaches*. In the "Merry Wives of Windsor," Shakespeare (act I, sc. 1, line 124) uses "Good worts? good cabbage!" *Heads* of cabbage is an old use, dating from 1620, but here the pluralized "heads" does not call for "cabbages." To-day the tendency of educated persons is to use *cabbages* when the plural is meant, and "heads of cabbage" when quantities are considered, but the farmer and the grocer both would say, "A hundred head of cabbage. As to cabbage served at table the correct form to use is, "*This cabbage is good.*"

"C. W. V.," Norfolk, Va.—"In ordinary business correspondence, when quoting a communication comprising two or more paragraphs, should the quotation-marks be shown at the beginning of *each* paragraph as well as at the end of the last paragraph, or would it be sufficient and at the same time strictly proper to show quotation-marks only at the beginning of the first paragraph and at the end of the last paragraph of the quoted matter?"

When the matter quoted is composed of successive paragraphs, each paragraph is preceded by quotation-marks, but the closing marks are placed at the end of the last paragraph only.

"H. W. C.," High Hill, Mo.—The correct pronunciation of the word *cerebrum* is *ser'i-brum—e* as in *get*, *i* as in *habit*, *u* as in *but*.

"W. K. T.," Livonia, La.—"Kindly inform me if it is correct for a child to answer an older person as follows: 'Yes, Ma'am' and 'No, Ma'am'? I argue that is only for servants to answer those above their level and a child should say: 'Yes, Mother,' 'No, Miss Jones,' always calling the name of the person. Am I right?"

In the writer's grandfather's time it was the practise, when addressing one's parents, to use "Sir" and "Madam" or "Ma'am" as a sign of respect. In those days a letter to one's father began "Honored Sir"; to-day it begins "Dear Dad.

The form to which you refer is now generally out of use except among country folks who teach their children to follow the example set them by their parents—that is all.

Wireless News For Tool Users

Here's the easy way to keep your costly tools working smoothly, metal parts rustless, wooden handles shining like new. Lubricate frequently with 3-in-One. It penetrates bearings at once; works out old grease and dirt; provides the right kind of lubrication to minimize friction. Won't gum or dry out.

3-in-One

The High Quality Tool Oil

also prevents rust and polishes the wooden handles Edged tools especially, need 3-in-One protection before putting away, because the least rust on the cutting edge destroys its keenness 3-in-One won't evaporate and leave the metal unprotected.

There's only one 3-in-One, the most widely used bottled oil in the world. Ask for it by name.

Sold at all good stores in 1-oz., 3-oz. and 8-oz. bottles; also in 3-oz. Handy Oil Cans, the most convenient package for tool users Non-refillable, with a screw top nozzle to prevent spilling.

FREE: Generous sample and Dictionary of Uses. Request both on a postal.

THREE-IN-ONE OIL CO. 165 LE. Broadway, New York

their necessity to glorious gain" after they have put away their dreams. To the others will go the easy prize of life—success, which has become a somewhat odious onion nowadays, chiefly because we so often give the name to the wrong thing. When you reach the evening of your days you will, I think, realize—with, I hope, becoming cheerfulness—that we are all failures, at least all the best of us. The greatest Scotsman that ever lived wrote himself down a failure:

The poor inhabitant below
Was quick to learn and wise to know
And keenly felt the friendly glow
And softer flame.
But thoughtless follies laid him low
And stained his name.

Perhaps the saddest lines in poetry, written by a man who could make things new for the gods themselves.

"If you want to avoid being like Burns there are several possible ways. Thus you might copy us, as we shine forth in our published memoirs, practically without a flaw. No one so obscure nowadays but that he can have a book about him. Happy the land that can produce such subjects for the pen."

The rector held up a few sheets of paper, a last message from Captain Scott, written just before his death in the Antarctic, and said that the explorer's end was an example of courage at its best. He continued:

"Courage is the thing. All goes if courage goes! The greatness of a people is founded on their moral principles; but what says our Johnson of courage: 'Unless a man has that virtue he has no security for preserving any other.' Be not merely courageous, but light-hearted, also gay. Some people have odd ideas of what gaiety is. There is an officer who was the first of our army to land at Gallipoli. He was dropt overboard to light decoys on the shore, so as to deceive the Turks as to where the landing was to be. He pushed a raft containing those in front of him. It was a frosty night, and he was naked and painted black. Firing from the ships was going on all around. It was a two hours' swim in pitch darkness. He did it, crawled through the scrub to listen to the talk of the enemy, who were so near that he could have shaken hands with them—lit his decoys and swam back. He seems to look on this as a gay affair. He is a V. C. now, and you wouldn't think to look at him that he could ever have presented such a disreputable appearance. Would you? (Colonel Freyberg.)

"Another piece of advice—almost my last. For reasons you may guess I must give this in a low voice. Beware of McConnachie. When I look in a mirror now it is his face I see. I speak with his voice, and you all know now what a voice it is. I once had a voice of my own, but nowadays I hear it only from far away, a melancholy, lonely, lost little pipe. I wanted to be an explorer, but he willed otherwise. You will all have your McConnachie's luring you off the high road. Unless you are constantly on the watch, you will find that he has slowly pushed you out of yourself and taken your place. He has rather done for me. I think in his youth he must somehow have guessed the future and been fleggit by it—flichtered from the nest like a bird—and so our eggs were left, cold. He has clung to me, less from mischief than for companionship. I half like him and his penny whistle. With all his faults he is as Scotch as peat. He whispered to me just now that you elected him, not me, as your rector."

of the soul and with a maximum and abnormal development of bodily interests. It would seem that mothers are neglectful to an extreme degree of the modesty and virtuous grace of their daughters, which, after all, are the virtues which true men love and admire. Men are forced to look up to avoid unseemly display by the modern woman, and how she can avoid realizing this fact is a marvel in femininity.

Ignorance of their own natures, believes President A. Mackenzie Meldrum of Spokane University, is at the bottom of much of the trouble. He writes

Our young people do not know themselves, nor have they learned the sacred purpose of their being. One of the most alarming facts in the world to-day is man's ignorance of self. The home, the school, the press, the platform and the pulpit must unite in combating this noisome pestilence that is spreading a sable cloud of shame disease and death over every community in the land; sowing seeds of moral, mental, physical and spiritual degeneracy, to be reaped by our children in a harvest of national decay.

A CRITIC OF DRESS

"Too many of our young women are improperly clad," declares C. B. Riddle, the editor of *The Christian Sun*, official organ of the Southern Christian Convention

We are so anxious to teach the young of the nation the various branches of academic knowledge, rules of etiquette, and forms of good society, that plain talks to the boys and girls seem to be divorced from the family curriculum. This is a deplorable mistake, against which I inveigh and offer my most solemn protest; for I verily believe it is more important for our sons to know themselves, than to know Plato and Virgil: and it is more imperatively necessary for our daughters to know themselves than to know the histories of ancient Greece and Rome.

"Manners are superficially better and fundamentally worse," remarks President Harry Morehouse Gage of Coe College, Cedar Rapids, Ia. "There has been a pronounced moral sag. Things that are done now are in marked contrast to the vaulting moral enthusiasm of three or four years ago. Generally speaking, there is not enough restraint. Freedom is not balanced

The Touring Car

A New Ideal in Motor Car Value

A new ideal has come true—plainly and unmistakably. Oakland deliberately planned to make the New Oakland the finest light-weight six that advanced engineering, highest grade materials, and expert workmanship could build.

This is borne out in the rugged Oakland chassis; in the remarkable efficiency of Oakland's own overhead-valve six-cylinder engine; and in the many features which the New Oakland shares with much higher priced cars.

Crowning this splendid mechanism are the five new and distinctive Oakland bodies—of a beauty, comfort and fine equipment unequalled anywhere in their price range.

These things prove Oakland's leadership in light-weight six manufacture. Oakland is proving that leadership to an evergrowing number of Oakland owners by its reliable performance, backed by the 15,000 mile guarantee.

See this fine car! Test it thoroughly! Compare it with other cars! The New Oakland Six—the light-weight six of the General Motors group—is by far the finest and most desirable automobile in its price class.

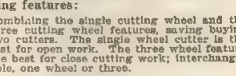
will be interested in knowing about

TRIMO TOOLS

In the first place we are illustrating them and are giving some of their winning features below.

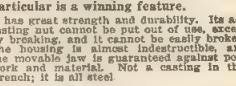
The Trimo Pipe Cutter has several winning features:

Combining the single cutting wheel and the three cutting wheel features, saving buying two cutters. The single wheel cutter is the best for open work. The three wheel feature the best for close cutting work; interchangeable, one wheel or three.



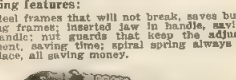
The Trimo Monkey Wrench; its every particular is a winning feature.

It has great strength and durability. Its adjusting nut cannot be put out of use, except by breaking, and it cannot be easily broken. The housing is almost indestructible, and the movable jaw is guaranteed against poor work and material. Not a casting in this wrench; it is all steel



The Trimo Pipe Wrench has four winning features:

Steel frames that will not break, saves buying frames; inserted jaw in handle, saving handle; nut guards that keep the adjustment, saving time; spiral spring always in place, all saving money.



The Trimo Chain Wrenches also have their superior features:

Strength and durability are fundamental with them, are readily adjustable to pipe and are guaranteed against poor material and workmanship; indeed all Trimo Tools are so guaranteed. The chain pocket being in the handle the strain comes on the handle instead of on the jaws.

View in the Sales Bookkeeping Section of Accounting Office, Carson, Pirie, Scott & Co., showing part of the battery of 65 Underwood Bookkeeping Machines.

Carson, Pirie, Scott & Co. are no longer "Under the Shadow of the Pen"

TODAY there are 65 Underwood Bookkeeping Machines in the offices of Carson, Pirie, Scott & Co. They are there because this great mercantile house has always followed the policy of giving its customers a maximum of service and protection—and of administering its own business under the most modern and economical methods.

In spite of the fact that they maintain thousands of active credit accounts, they close their books by about noon of the first business day of each month, and have their bills ready to mail between two and four o'clock on the afternoon of the same day.

Since the completion of their mechanical accounting system, they have not been out one cent in any month on their trial balances.

Keeping books on Underwood Bookkeeping Machines enables Carson, Pirie, Scott & Co. to:

1. Prove that all items are correctly posted as to amounts, on both ledgers and bills.
2. Prove that all items are accounted for, and that none are omitted from either ledgers or bills.
3. Prove that old balances are properly picked up on both ledgers and bills, and that new balances are correctly computed.
4. Prove that debit items are entered in debit columns and credit items in credit columns.
5. Prove that the items have been posted and billed to the correct accounts.
6. Eliminate all trial balance troubles.
7. Eliminate the labor of footing thousands of bills at the end of each month, as under their plan the bill is ready to render immediately after the last entry has been made.

(We have prepared a report showing the operation and results of the methods used in the office of Carson, Pirie, Scott & Co. This report will be sent on request.)

The Underwood Bookkeeping Machine can lift "The Shadow of the Pen" from any business, large or small. The coupon below will bring one of our representatives who will gladly give expert advice on any accounting problem.

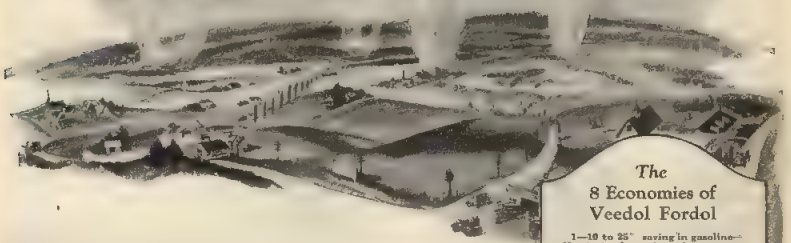
Success!



Ford Owners *acclaim* Veedol Fordol

The Ford owners of America were first told the story of Veedol Fordol on August 26th. On September 16th—three weeks later—161 carloads containing over 10,000 barrels of this new economy oil for the Ford automobile had been shipped to every section of the country to supply the tremendous demand. And this initial demand has been increasing daily.

Veedol Fordol was certain of immediate success because four years of exhaustive laboratory and road tests *proved conclusively that it mastered the unique and complex lubrication problems of the Ford engine and transmission.* With the use of Veedol Fordol, the Ford further enhances its reputation for economical operation.

Give Veedol Fordol a trial. That's what one corporation operating a fleet of 900 Ford cars did and adopted Veedol Fordol. That's what big city and government departments did—and adopted Veedol Fordol. They discovered for themselves the economies of Veedol Fordol established by Tide Water engineers.

Read the "Eight Economies of Veedol Fordol" listed at the right.

A trial will convince you, as it has already convinced thousands, that Veedol Fordol in your Ford car means a new motoring satisfaction *plus many new economies.*

Veedol Fordol is on sale at all dealers who display the orange and black Veedol sign

TIDE WATER OIL SALES CORPORATION
11 Broadway, New York

Veedol oils and greases are sold throughout the world

The 8 Economies of Veedol Fordol

1—10 to 25% saving in gasoline—Hundreds of tests have demonstrated that Veedol Fordol conservatively saves 10% on gasoline consumption. 25% to 33⅓% savings have been developed repeatedly

2—Eliminates costly "chatter" Veedol Fordol lengthens the life of Ford brake and transmission bands by properly lubricating them. "Chatter," a result of faulty lubricants, is *entirely eliminated*

3—10 to 25% saving in oil—The savings in oil consumption run from 10% to 25%. The exact savings depend upon the mechanical condition of the engine and the lubricant formerly used.

4—10 to 25% less carbon Veedol Fordol forms on an average from 10% to 25% less carbon in the Ford engine cylinders. The exact savings depend on the mechanical condition of the engine and the lubricant formerly used Less carbon means more power and fewer repairs.

5—Resists heat and friction—Veedol Fordol possesses to a super degree the famous characteristic of all Veedol oils to resist heat and friction

6—Increased ability to coast—With average lubrication a Ford will only coast down steep hills. With Veedol Fordol coasting is possible down the slightest grades.

7 Resists fuel dilution—Even with poor fuel, Veedol Fordol maintains its power-seal and lubricating value longer than other oils Result more miles per gallon of gas and per quart of Fordol.

8—Fewer repairs—Because Veedol Fordol masters the lubricating problems of the Ford power plant the result is a hitherto unknown freedom from engine vibration and repair bills

Send for Veedol Fordol booklet

The new economy oil for Fords

The VALUE of TIME
for instance, in making good smoking tobacco

FOLKS, Time can be either a good servant or hard master, dependin' on its use.

THERE'S tobacco, for instance. You can't crowd Nature when the tobacco's growin' an' you can't rush time when the tobacco's agein'.

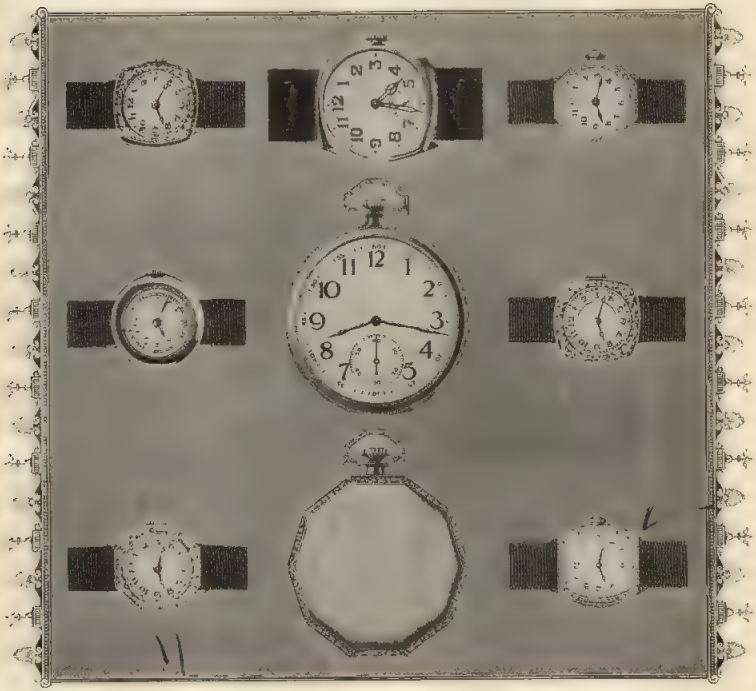
SO WE take that good ole Burley that ripened slowly in the Kentucky sun and we store it in wooden hogsheads for *two years*. Time makes it mild an' sweet as *nothing else* can.

PUTTIN' quick-sand in the hour-glass won't shorten the day's work, an' quick methods won't mellow tobacco. Stick to Velvet, the aged in the wood pipe tobacco.

Velvet Joe

Wadsworth Cases

MAKE WATCHES BEAUTIFUL



Portraying in precious metals the Wadsworth ideals of symmetry, grace and permanence

WHEN you choose a watch movement in a Wadsworth Case you are giving that movement not only a dress of distinction but the finest protection it can have.

The perfect workmanship in Wadsworth Cases and their exquisite beauty are the work of artists and master workmen who have fashioned cases for the leading watch movements for more than thirty years. Many of the most popular designs with which you are acquainted are Wadsworth creations.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter

Readers will please bear in mind that no notice will be taken of anonymous communications.

H. H. H.," Cincinnati, O.—"Are both spellings, *kidnapper* and *kidnaper* correct?"

Yes: the dictionary, however, prefers the form with the one "p"—*kidnaper*, as the main stress is on the first syllable.

"S. J. H." Carmel, N. Y.—"Please settle the following: Did or did not Colonel Theodore Roosevelt lead the assault of American troops up San Juan Hill in the Spanish-American War?"

The *New International Encyclopedia* under the article *Theodore Roosevelt* gives the following: This regiment [the First United States Volunteer Cavalry] popularly known as the Rough Riders Roosevelt (colonel since the action at Las Guasimas) led in a famous charge up San Juan Hill near Santiago, Cuba."

"J. L. V." Brooklyn, N. Y.—"Is it incorrect to use the expression 'Those kind of books'? If so, why?

Since *kind* is singular, it should not be preceded by the plural *those*. Say, "This kind" or "that kind." "*That* kind of apples is best," not "*Those* kind of apples are best." "*That* kind of books is the correct form. But *this* may be used instead of *those* in collective expressions, such as "*this* ten dollars." Shakespeare, however, wrote, "*these* kind of fools" (*Twelfth Night*, act i, sc. 5), *these* kind of knaves (*King Lear*, act ii, sc. 2), and "*these* are a kind of men" (*Othello*, act iii, sc. 3). Professor L. C. Carson ("English Composition," p. 126) rules that before the plural of *kind* the plural demonstrative should be used, as, *these kinds* of apples.

C. F. K. Berkeley, Calif.—"Is it not incorrect to say 'each and every one' as many writers and public speakers do? Is not 'each one' the same as 'every one' and the expression 'each and every one' the same as saying 'each and each one'? For instance, to say 'each and every one must do his duty' would be a stronger sentence if and 'every one must do his duty,' would it not, or 'each one must,' etc.? Please give your opinion of this question."

Johnson in his "Alphabet of Rhetoric" says—

As to the correctness of the expression *each and every* (per se), some critics hold that it never should be used. Certainly it is pleonastic in the great majority of instances in which it occurs, but there are a few rare cases in which it serves the purpose of first attributing the person or object both to each individual and [illegible] collectively, but using *every* as a more emphatic inclusive than *all*. An Ohio judge is reported as saying: "The evil results of this verdict will be felt in this community long after *every one* of these jurymen are in their graves." The last four words should be *as in his grave*.

Safety First—"How is it that you were arrested this way, Captain [illegible] asked the sick old lady.

"Because I always quit down in front, madam," replied the weary captain, turning on his heel.—*Brown Jug*.

Our Flexible Language

This freak poem, we are informed by the lady who sent it in, was a favorite with Oliver Wendell Holmes:

Frolicked in the early spring a miss
Here, free with not a thought amiss.
Later in the season came a mat-
Hanging round the maiden then they
missed her.
Fell in love perhaps they didn't mean to,
But papa objected and 'twas mean, too,
So ere that marry he would never let her
So she disobeyed him to the letter,
And the master and the merry maiden
Fled and found a justice and were made 'un.
—*Boston Transcript*.

WINCHESTER
TRADE MARK
SKATES

1866

1922

BOYS

WE want you to own a pair of Winchester skates. They are good skates designed for speed, action and hard service.

The frame is supported by a bridge girder that strengthens and stiffens the whole skate. The ball-bearing rolls are light-running and especially hardened to give long wear on asphalt and concrete. We have had all sorts of boys skating continuously for days on these skates over rough pavements to test them out thoroughly before offering them to you. We believe they are right, and want you to own a pair.

There are 4000 stores in the United States which sell Winchester Skates and other new products. Look for this sign on the window: "*The Winchester Store.*"

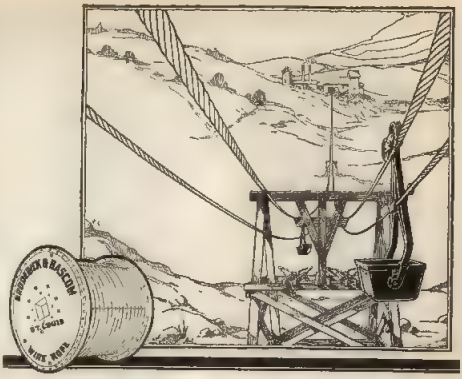
where there were no twigs on which to settle. He crossed the yard, rising at first, and then settling until he came to a wisp of timothy, where, ever so daintily, his minute claws encircled the stem and he came to rest. Later in the day, as strength came to him, he rose from his lowly station and joined his brother in the top of the pear-tree.

TURNING GOATS INTO GOLD

"DO goats eat clothes and things?" a woman asked of a man who raises goats in Atlanta, Georgia, and he replied: "They eat clothes, but not 'things.' A goat has the best digestive system in the animal kingdom, and is the one creature known that can digest cellulose. Because clothes contain a wood cellulose from their cotton fiber, goats will eat them. Goats can also digest pine needles, but their ability to Fletcherize hardware is very much over-estimated." This gentleman, Mr. H H. Turner, an attorney, some years ago bought a goat. It was first a necessity, and then it grew to be a family pet, and we are told by Victoria Iler in the Atlanta *Journal*, "its kids and his kids became chums." Later on he bought more goats, and devoted his spare time to studying goatology, and the writer exclaims:

> Imagine an Atlantan living in an apartment house, and owning twenty goats—the only pure-bred goats east of the Mississippi and south of Ohio! That really isn't as incongruous as it sounds, for H H Turner owns the apartment house in which he lives, which has a two-acre "backyard and plenty of space even for his high-brow "Toggenburgs."
>
> Mr. Turner is very much interested in goat-raising as a new industry for Georgia, and to sound out Georgia farmers on the subject, he printed a letter in the *Market Bulletin* of the State Agricultural Department, offering to give away some of his graded Toggenburg goats for breeding purposes. He received a flood of answers! Most people didn't know there were that many goats in the State, even—let alone farmers who raised 'em.
>
> "There are many graded Angora goats raised in Georgia for their wool," said Mr Turner. "But I am anxious to see our farmers raise milch goats. They are much more profitable," and he gave us some information sent out by the Government's Bureau of Animal Husbandry which conducts an experimental "goat" station at Beltsville, Maryland.
>
> In the first place, the goat's milk, according to chemical analysis, comes nearer to mother's milk than that of any other animal, and this gives it a high commercial value. Goat's milk is more nutritious than cow's milk, and contains two per cent. more cream. It is more readily digested. It does not sour easily. It is purer because a goat is not as susceptible to disease as a cow.
>
> In California goat-raising has developed into a great industry. There are goat dairies that have become ultra-profitable throughout the State. Goat butter sells at a higher price than cow butter, yet it has a lower rate of manufacture.
>
> Government figures show that a farmer can maintain a small herd of ten goats (maximum number) for the cost of upkeep of one cow! Good milk goats give from five



Tracks of Wire Rope

Two parallel wire cables supported at intervals by skeleton-like towers. These are the "tracks" of a modern Aerial Wire Rope Tramway upon which the conveyors glide between loading and unloading points.

Wire rope also supplies the "pull" that moves the conveyors far over-head, where mud and snow and sleet can't interfere with steady operation.

Being designers and builders of Aerial Tramways, this company knows the peculiar requirements of track and pulling cables. Here Yellow Strand performs, as it always performs, wherever there's heavy work to do in mine, quarry, logging—everywhere—lowering upkeep costs by putting off renewals.

The strand that's painted yellow is your guide to wire rope quality and economy. Follow the Yellow Strand.

We also manufacture all standard grades of wire rope for all purposes, and have been since 1875. There is an authorized dealer in every locality. Write us for the name of the one nearest you.

BRODERICK & BASCOM ROPE CO., ST. LOUIS
Branches: New York and Seattle *Factories:* St. Louis and Seattle

Basline Autowline and Powersteel Autowlock two indispensable automobile accessories made of Yellow Strand Wire Rope, have strongly entrenched themselves in the hearts of motorists the nation over.

Baltimore New York Chicago

THE ▾ SPICE ▾ OF ▾ LIFE

All In.—LACONIC TOGHEY—"Information given out here?"

TERSE CLERK—"It has."—*Boston Transcript.*

Fashion Note.—Women's hats, it is said, are to be larger. And the milliner's bill, no doubt, will be an affair of extra sighs.—*London Opinion.*

The Kind We Sometimes Eat.—FOR SALE—Two thoroughbred blue Antedeluvian roosters. W. J. T———.—*Classified Ad in The Tribune-Republican, Meadville, Pa.*

A Recipe.—To avoid a colorless existence, keep in the pink of condition, do things up brown, treat people white, be well read, and get out onto the golf green under the blue occasionally.—*Boston Transcript.*

Atonement. Mr. Graham Bell has devised an apparatus for condensing air into water, to be used by travelers in the desert. Mr. Bell is the inventor of the telephone, and he seems to be endeavoring to make amends for his early indiscretion.—*London Opinion.*

We Live to Learn.—"I never knew till I got a car," said Bishop Eightly, "that profanity was so prevalent."

"Do you hear much of it on the road?"

"Why," said the Bishop, "nearly everybody I bump into swears dreadfully."—*Philadelphia Inquirer.*

A Lingering Hate.—COMEDIAN—"Poor old Harry got the bird properly last night. They hissed him right off the stage. Then I came on. The audience quietened down and listened to my first number with every attention. Then, just as I was giving 'em my patter, *blowed if they didn't start hissing old Harry again.*"—*Punch (London).*

Jogging His Memory.—It was a thrilling story that McGregor had to tell.

"I had abandoned all hope," he said. "As I sunk for the third time my past life seemed to rise before me in a series of grim, realistic pictures."

A murmur of sympathy rolled from the lips of listening friends; but just as McGregor was preparing to resume, McTavish interrupted him sharply and hopefully.

"And did you happen to notice," he asked, "a picture of me lending you a fiver in the autumn of 1919?"—*The Continent (Chicago)*

In Bad Company.—When a vote is to be taken on some important measure, a Congressman who can not be present "pairs" himself with some Representative who would vote "aye" to the Congressman's "nay," or *vice versa.* Once a Democratic member of the House received a letter from an active politician of that party in his district, calling attention to the fact that he was reported in the *Congressional Record* almost every day as being "paired" with a Republican. "I don't doubt your loyalty to the party," read the letter; "but I think the boys would like it a good deal better if you paired with Democrats instead of Republicans."—*Harper's Magazine.*

In the Rough.—"Sir, I have all the gems of English literature in my library."

"Yes, and I notice that they are uncut gems."—*Gaboon.*

Our Post-War Forest. Great family trees in America are few, but it is probable that many new ones were started during the war by grafting.—*Baltimore Sun.*

A Contingent Worker.—"Ah wants a day off, boss, ta look for a job faw mah wife."

"And—if she doesn't get it?"

"I'll be back to-morrow."—*Phœnix.*

Preparedness. A Mexican revolutionary, treated in a New York hospital, had twenty-two bullets extracted from his body. It is said that he had to have this done in order to make room for more when he returned home.—*Punch (London).*

Current Humor. Once there was a conductor who was not satisfied with his wages, and left. The next day while looking for a job he happened to step on the third rail Did he get killed? No. He was a non-conductor.—*Science and Invention Magazine.*

Getting Him Going.—FATHER (from upstairs)—"Helen, isn't it time for the young man to go home?"

YOUNG MAN—"Your father is a crank."

FATHER (overhearing)—"Well, when you don't have a self-starter a crank comes in mighty handy."—*Boston Transcript.*

Reprisals.—WIFE—"Where, might I ask, have you been till this hour of the morning?"

HUSBAND—"W—why, round at the c—club, of course, o—o—considerin' of a strike."

WIFE—"Well, you go back to your club and consider it a lock-out!" *London Mail.*

Enthusiastic Convert.—Dr. James Melvin Lee, head of the Department of Journalism in New York University, said during the course of an after-dinner speech: "The average person, as well as the average nation, is blind to his own faults. An American woman, a leader of the S. P. C. A. was soliciting subscriptions for the animals' cause in Madrid. 'Will you subscribe, sir?' she asked a Spanish grandee.

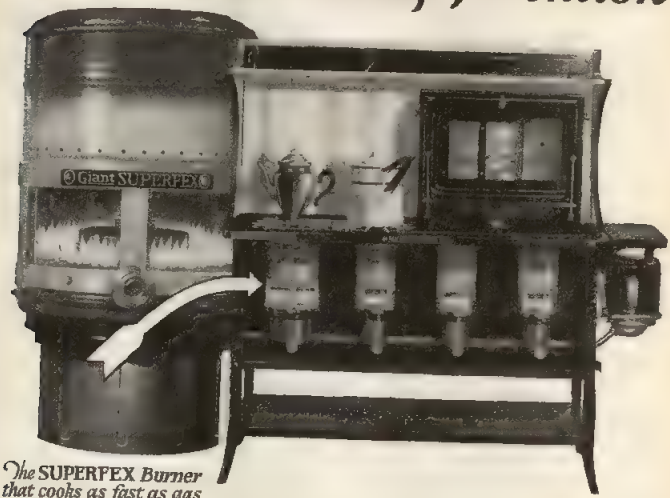
"'I'll do better than that, madam,' said the grandee graciously. 'I'll get up a bull-fight for your society's benefit.'"—*The Argonaut (San Francisco).*

Efficiency First.—An applicant for work at the Ford plant asked a veteran Ford employee if it were true that the company was always finding methods of speeding up production by using fewer men. The veteran replied:

"Most certainly. In fact," he continued, "I just had a dream which illustrates the point. Mr. Ford was dead and I could see the pallbearers carrying his body. Suddenly the procession stopt. Mr. Ford had come to life. As soon as the casket was opened he sat upright, and, on seeing six pallbearers, cried out at once: 'Put this casket on wheels and lay off five men.'"—*Wall Street Journal.*

It's here at Last!

A Revolutionizing Invention



The **SUPERFEX** *Burner that cooks as fast as gas and is absolutely reliable*

What you get in this new stove—See it NOW at your dealer's

1. Cooking speed of the giant gas burner —In the Giant SUPERFEX Burner. Cooking speed of the standard gas burner —In the standard size SUPERFEX burner.
2. Abundant heat that is absolutely clean and odorless.
3. Greater economy and reliability of cooking with all grades of kerosene oil.
4. Operating convenience, cleanliness and new time saving features.
5. Handsome, sturdy, long-lived stove with higher and bigger Aladdin Quality Porcelain Enameled Cooking Top, and new base shelf for utensils.
6. One Giant and 3 Standard SUPERFEX burners.
7. A new (more beautiful) Gray Enamel finish on all chimneys.

THE world's largest makers of oil stoves and ranges have crowned their achievements with the production of an oil range that cooks as fast as gas and is absolutely reliable

Its speed and success are all in the New SUPERFEX Burner, a new and revolutionizing invention, which adds quickness and absolute heat control to the remarkable cleanliness and sturdy virtues of the world-famous New Perfection Oil Cook Stove—now used by more than 4,000,000 housewives.

To accommodate the SUPERFEX Burners and the Giant SUPERFEX, we have constructed a stove that for beauty, strength, smartness, convenience, completeness and all-around satisfaction, sets a new standard. Now on exhibition for the first time America over. Visit your dealer.

This new "300 line" of New Perfection Stoves with SUPERFEX Burners, is additional to the long-established "Blue Chimney" New Perfection Stove, famous and favored the world over and still the most popular oil stove made at its price.

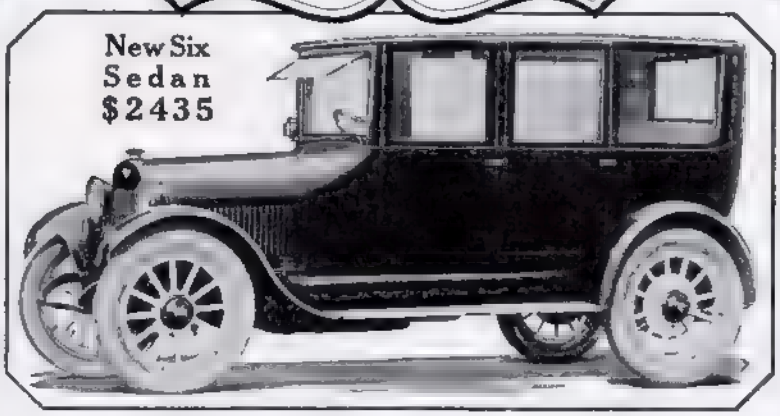
REO



Three New Reos—Closed Models

Each of these Closed Reos is distinctive—each ideally suited to a special class of service.

All are mounted on that "Incomparable Six" Chassis—the "Six of Sixty Superiorities."

All are of the same quality too—Reo quality—which is to say the body-craft and finish are of the highest order of excellence.

Sedan seats five; Coupe, four—the two handsomest models that ever came out of the Reo shops.

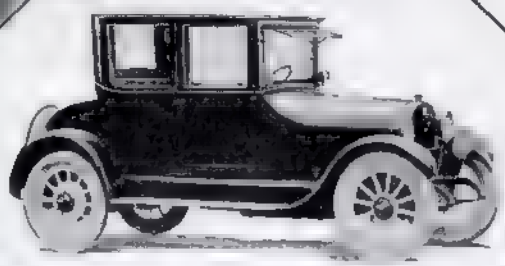
Full aluminum bodies—richly upholstered and exquisitely finished.

For the professional and business man—for a thousand kinds of purely practical service—the new Business Coupe was especially designed and built.

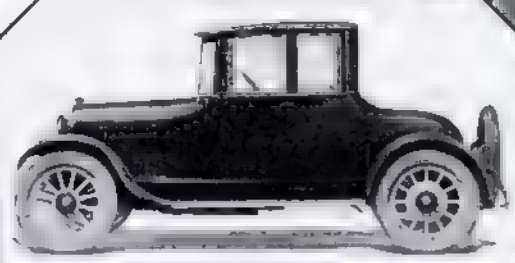
If your needs call for more than one car—"Standardize on Reos"

Prices are f. o. b. Factory, plus Federal Tax

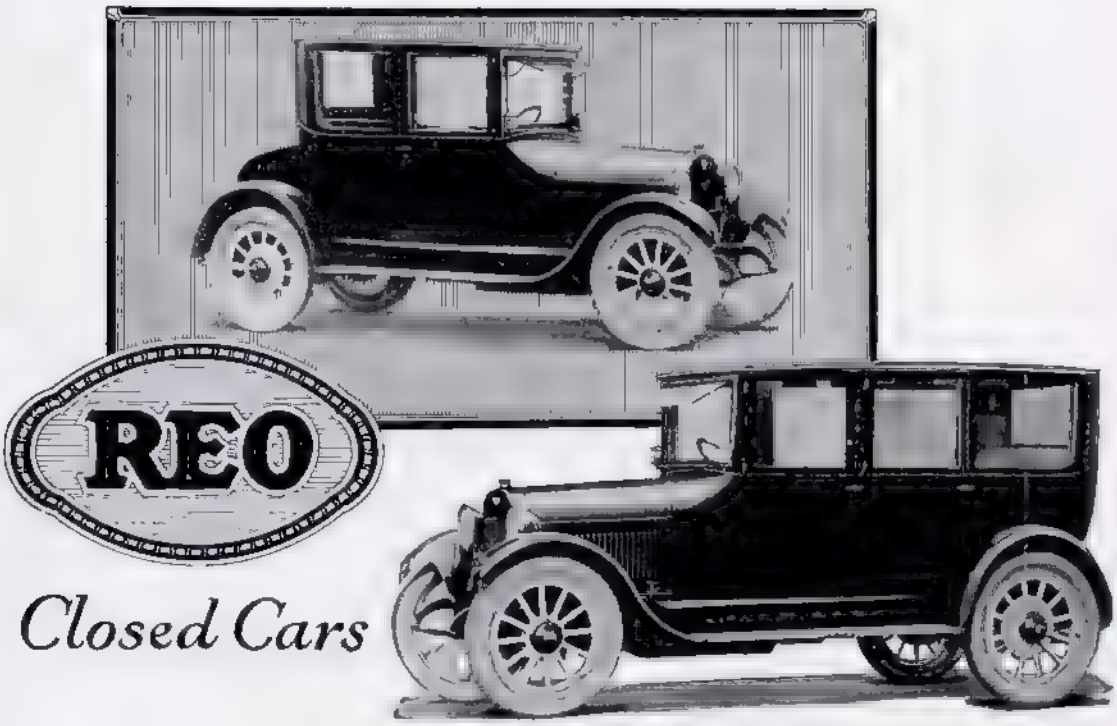
Reo Motor Car Company, Lansing, Michigan



New 4-Passenger Coupe—$2355



New Business Coupe $1895



Closed Cars

Beauty That is More Than Skin Deep

When admiring the new closed Reos—the four passenger Coupe and the new Sedan—which you will find outstandingly beautiful by comparison with other high class equipages, please remember that the beauty you see is more than skin deep.

Concealed excellence—beauty in unseen as well as visible places—is a Reo attribute.

If you will look not only at the surface, but beneath—and if you will insist upon knowing the materials that go into the making of the various closed cars shown you, you will find that few cars at anywhere near Reo prices have all-aluminum bodies.

And from the fullness of our long experience, we assure you no lesser material is adequate to the service and the satisfaction you expect when you select your car.

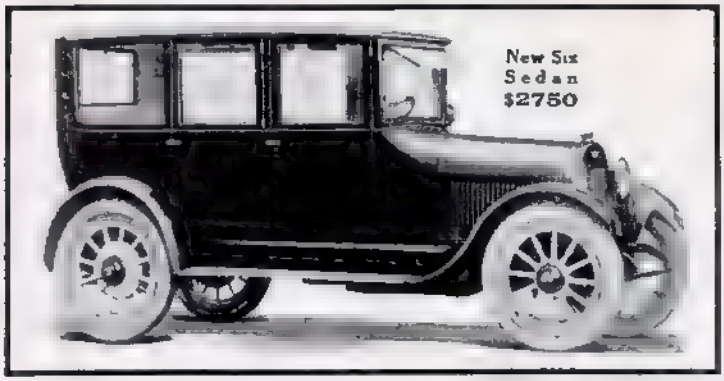
No other material will receive and maintain the finish—will resist rust—will be so free from "drumming" sounds—as aluminum.

And no body can be as good as a Reo body unless the construction be, as Reo bodies are, full aluminum.

If you will study this body question—insist first on the best materials and construction, and then compare prices, you will be more than ever surprised to learn that you may have a car that is the last word in quality and fine coach work, and yet at a price that is so much less than you had expected to pay.

Reo Motor Car Co., Lansing, Mich.

"The Gold Standard of Values"



REO

Closed Reos—For the Elect

Reo automobiles—all types, but especially the closed models—are built for folk of refinement and good taste.

Which is to say, those who judge values not merely by the price tag, but in actual quality and finish as disclosed by critical inspection and close comparisons.

To fully appreciate the exceptional value you get in a Reo, it were better that you did not know the price until after you had seen and compared the various models and tested every phase of performance.

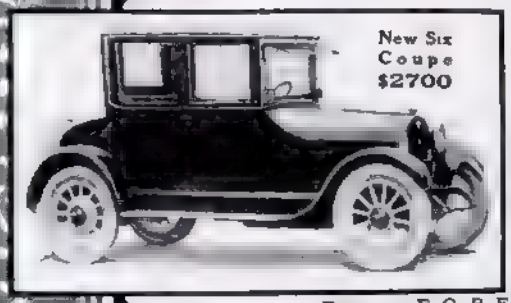
Then you would consider Reos on a plane with cars listing at fully twice the Reo price.

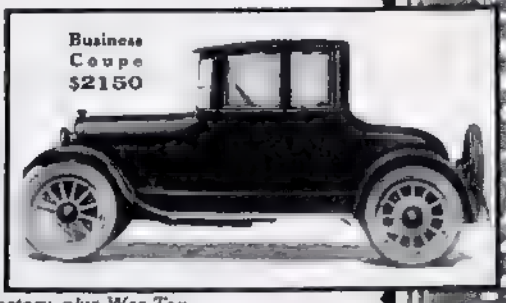
In the new Five Passenger Sedan and Four Passenger Coupe you will find everything the heart could desire and good taste suggest.

And—the new Business Coupe is just what its name implies—built for everyday use of the professional and business man, who must "live in his car" and who appreciates that dependability and that quality that are—Reo.

Reo Motor Car Co., Lansing, Mich.

Reo Motor Car Co., of Canada, Ltd., St. Catharines, Ont.





Prices are F. O. B. Factory, plus War Tax

Mediterranean Cruise

S.S. "Rotterdam"

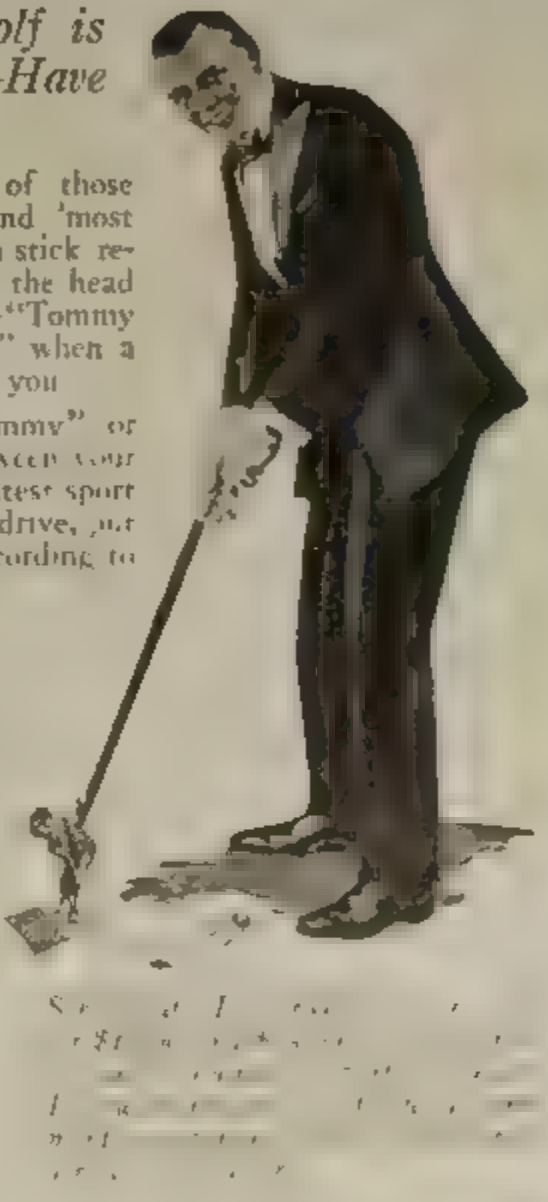
Anybody Can Play

Schoenhut's Indoor Golf is the rage of the hour—Have you taken it up yet?



Schoenhut's Indoor Golf is one of those games that everybody can play and 'most everybody does. It is played with a stick resembling a golf stick, but in place of the head there is a miniature golfing figure—"Tommy Green" when a man; "Sissie Lofter" when a woman—who makes your strokes for you.

You control the action of "Tommy" or "Sissie" through a lever located between your first and second finger. It's the greatest sport imaginable. "Tommy" and "Sissie" drive, put or approach, just as in real golf, according to the kind of club you put between their fingers and according to your skill in operating the lever.

A full set of clubs is furnished with each miniature figure, together with putting greens, tees, bunkers and everything that goes with a regular golf game in miniature. The small, hollow, celluloid balls are perfectly harmless. Thousands of golfers all over the country are enjoying this new and exciting game of Schoenhut's Indoor Golf. Four thousand sets were sold to the golfers of New York and Philadelphia alone within three weeks of its introduction. You will find that it requires as much skill and scientific accuracy as a real game of outdoor golf—a truly worthwhile amusement.

Notice to Professionals—It will pay you to carry Schoenhut's Indoor Golf

-no winter this winter California

You and Your Family should spend this winter out-of-doors in California

There are excellent schools for the children and golf links galore for you.

Then for the week-end—motoring over perfect highways, along the base of green-clad mountains and by the sea.

There are luxurious resort hotels and cozy inns, or, rent a bungalow and enjoy your own rose garden.

The Santa Fe operates four daily trains to California. One of them the California Limited is exclusively for first-class travel and Fred Harvey serves all the meals "all the way."

Spick-and-span-new steel equipment on the California Limited.

There are Pullmans via Grand Canyon National Park, to Los Angeles, on both the California Limited and the Missionary. We will arrange your Pullman reservations so you can stay at the Canyon any number of days and be assured of your space when resuming journey.

Why not visit Southern Arizona, going or returning? It is delightful at Castle Hot Springs, Ingleside and Chandler.

—Hawaii afterwards—

An Amazing Summerland

— a Complete Change.

YOU'LL sleep *under blankets* in Southern California nine nights out of ten in June, July, August and September—wonderfully rested and refreshed for the thousand-and-one things to do by day.

And you have always wanted to see Southern California. If you come this summer you'll have the best trip of your life.

4,000 Miles of Boulevards

Four thousand miles of enchanting, paved highways, marked by 70,000 guide-signs, take you by motor to a myriad interesting sights and places—to mountains, seashore, mile-high lakes, rich orange groves and historic landmarks.

Smooth as great city thoroughfares. Two hundred miles a day with ease is common.

World-Famous Golf

Here are world-famous golf courses with grass greens and tees and wonderfully beautiful fairways from which great panoramic views of mountains, valleys and the ocean spread out for miles.

A rainless season permits play practically every day.

All Summer Sports

Bathing at the seashore, at the foot of mountain ranges, camping, fishing, hiking, horseback-riding up wild mountain trails and over country that you've read about.

Visits by motor to great National Parks and Forests, which are at their best in summer. Giant trees, tremendous waterfalls and sky-blue lakes!

And then the great Mojave Desert, like Sahara. It's like a trip abroad, in fact.

And all these wonders *within a few hours* of a great city in the center of this wonderland of summer fun

Fine hotels, of course. But less pretentious places too, so everyone can suit his taste.

But Best of All

A complete change! Different country, different scenery, different people. Great wide expanses. Hundred mile views on clear days. Regularity of weather. A continual outdoor life. Absorbing. Fascinating. You "lose yourself" and thus completely *recreate* yourself.

Summer? An *amazing* summerland—you'll never spend a more delightful, restful, interesting summer anywhere.

Ask any railroad ticket office for further information, or mail coupon below.

Special, low-rate, round trip fares beginning May 15th—*NO MORE WAR TAX.*

Plan now for this summer. Let the family have this great change and great trip.

A Strange Idea

for a summer trip

By An Easterner

"See a new country, a wonderland of summer. Get a complete change of scene (often the most valuable part of a vacation).

"Be entirely absorbed and self-forgetful. Come back a new man."

That was the advice of my physician seven years ago when I felt in need of real rest and recreation. And then he said what I thought *a strange thing* at the time—*"Go to Southern California this summer."*

"What!—from one warm place to a warmer?"

"You don't know California in the summer," he replied. "It's cool there."

And then he showed me these U. S. Weather Bureau figures.

Average mean temperature for Southern California: June, 66 degrees; July, 70 degrees; August, 71 degrees; September, 69 degrees.—The 44-year record of the U. S. Weather Bureau.

Well, I went somewhat doubtful—and this is what I found:

That he and the U. S. Weather Bureau were right about the summer weather. I stayed three months—June, July, and August—and slept under blankets ninety nights.

I found a land that offered an amazing variety and quality of summer sports.

4,000 miles of motor roads through some of the roughest kind of country in some places, that I have ever seen, yet paved like city streets.

Great seashore resorts, mountain lakes and fishing streams, deserts, and the most intensively developed farm and fruit lands bordering on one another.

Stupendous views from mountain tops, great rides along fine oceanside highways, almost impenetrable wildernesses within a few hours of a great city, tenth in size in the United States

Golf and tennis everywhere. A myriad things to do. The result is I have missed only one summer in the seven since I first learned of this great playground.

GO NOW

Don't put off a trip like this, don't hesitate. Go while you can. *The complete change* alone is worth the comparatively small investment. This trip *is* an investment that yields incomparable returns.

If you wish to take "a trip abroad," here's one in your own United States.

Stay at fashionable hotels or modest boarding places, as you wish.

Your railroad ticket agent will give you complete information. Or send coupon to us for a free book that tells more than we have space here to relate.

Steamboat Days in New Orleans

THE romance of the old Mississippi River steamboat days hangs over New Orleans. Quaint, tall-funnelled side wheelers, recalling the heyday of nine-boiler floating palaces and thrilling river races, still nose their way up to the levees.

As a Mississippi pilot, Samuel Clemens, famous humorist, often visited the Crescent City. He speaks interestingly of Creole restaurants and the beauty and gaiety of French New Orleans. Its famous cafes and shops, its Mardi Gras and its picturesque river trips continue to enchant the visitor. By all means, stop over there on your trip via the Sunset Route.

New Orleans

City of Romance

NEW ORLEANS—rich in historic lore—vivid with the colors of romance! Two centuries have not effaced her Old-World atmosphere. In the ancient *Vieux Carré*, or French Quarter, the landmarks and customs of a bygone era still survive.

Tarry there awhile on your Sunset Way to California. Wander through the picturesque streets with their sequestered gardens and fretted balconies—visit St. Louis Cathedral and the old French Market—view the battleground of Chalmette where Jackson fought and won behind cotton bales. Everywhere in New Orleans—on the busy docks and along beautiful parkways—are sights and scenes to hold the tourist.

A New Way to Hawaii~

IF you have been planning a trip to Hawaii, if you are resolved to escape the sombre threat of winter, in the radiant beauty of Hawaii's eternal sunshine—send the coupon below and find out about the U. S. Government ships that ply between Los Angeles and Honolulu. They are your ships, owned by the U. S. Government. They are setting new standards of service to the garden spot of the Pacific. Write today.

In Hawaii accommodations are no longer uncertain. Great hotels are built along the remarkably fine beaches. Modernly equipped cottages of all sizes and types are available for any length of time you desire.

To accomplish the voyage in the most satisfactory way, go on an American ship from Los Angeles. Huge in size, luxurious in appointment, attentive in service, these vessels are daily winning the admiration of Americans who travel on them. The de luxe accommodations are equal even to those on the great trans-Atlantic Liners.

Investigate this direct service now—send the coupon today!

Write Today

Your Government wants to be the home of every prospective traveler to Hawaii. If you are considering a trip there, send the information blank now—no matter when you intend to go. You will receive full information about the new U. S. Government ships. They are your ships—learn about them. Send the blank today.

Shower Bathe without wetting the head

—This, of course, is simply a matter of placing the shower head at the correct height and angle. Possibly a more important feature of Speakman showers for either residences, clubs or institutions is the Anyforce Head itself, which allows the bather to control the shower's volume—*instantly* regardless of the water pressure.

Both of these features are especially appreciated by women, who more and more are coming to bathe the shower way—in clean, running water.

The showershown is designed for institutions and is very economical in the use of water; you set the Lock-Shield Controlling Stops so that only a certain amount can be used.

Ask your architect about Speakman Showers and when you talk to your plumber he will be glad to give you a booklet on the kind in which you are interested—both Compression Valve and Mixometer types. If it is handier, we will send you the booklet that you request

Twelve Monthly Issues of

St. Nicholas Magazine

And One Book of Your Own Choice

ST. NICHOLAS has been youthful America's favorite magazine for fifty years. Nothing can take its place, say some of America's most prominent public men, who grew up with St. Nicholas. It is the most suitable Christmas gift that any boy or girl can find in his or her stocking on Christmas morning.

In 1923, St. Nicholas will be better than ever. Leading writers of juvenile stories and articles have been signed up for the most intensely interesting serials, short stories, and the latest news in sports, games and science. Prizes will be given as usual for the reader's best work in drawing, writing, photography, etc. Every page will be worth while.

Select any one of these books

KIM—By Rudyard Kipling

A book every boy should read, and will re-read. Tells of India, the land of tigers, intrigue and mystic lore—and how the son of an Irish soldier grew up in the native secret service and foiled well-laid plans of the foreign enemy.

Children's Book of Christmas Stories
By A. D. Dickinson

A carefully selected assortment of the best Christmas stories from all lands. Intensely interesting in itself, it will help furnish an extra stimulus to Christmas enthusiasm.

—or any one of these fine books

Scouting With Kit Carson
Inventions of the Great War
Pierrot: Dog of Belgium
Pretty Polly Perkins

Send your subscription as soon as possible, so the book, first copy of St. Nicholas, and a handsome Gift Card will arrive before Christmas Eve. Regular price of St. Nicholas, $4 per year.

11 days to *RIO*

THE S.S. "Pan America" carried the representatives of the United States Government to the Brazilian Centennial Exposition at Rio de Janeiro in only 11 days. This record time is maintained on every trip by the swift U. S. Government ships, operated by the Munson Steamship Lines to South America. Besides being the fastest, they are the most modern and luxurious vessels that sail to South America. Now new low rates are offered you.

Write for Booklet

If you are considering making the trip, send the coupon.

Your Government wishes the name of every prospective traveler. If you are considering an ocean voyage anywhere send the information blank now. You will be under no obligation.

You see the World *in* South America

A TRIP to South America is like a voyage around the world. In its ten great republics you enjoy every climate, every sight. Picturesque villages with an ancient civilization, modern cities seething with business and pleasure opportunities; majestic scenic beauties,—the towering Andes, the winding Tierra del Fuego, rolling plains and primeval forests. To see South America is to see the world.

Now 5 Days Less

And now U. S. Government owned ships have brought South America within your reach. They have broken all speed records. Rio de Janeiro is now only 11 days from New York. These swift new ships — 21,000 ton oil-burners—have set a new standard for accommodations too. Operated by the Munson Steamship Lines, with 50 years of successful experience, they offer comfort and service which marks a new era in South American travel.

Next sailings are:

S.S. Huron . . .	*Feb. 16th*
S.S. American Legion	*Mar. 2nd*
S.S. Southern Cross .	*Mar. 16th*
S.S. Acolus . . .	*Mar. 30th*

Fortnightly thereafter

Watch your gums—bleeding a sign of trouble

MEDICAL science knows how serious is the sign of bleeding gums. For it knows that tender and bleeding gums are the forerunners of Pyorrhea, that dread disease which afflicts four out of five people over forty

If the disease is unchecked, the gumline recedes, the teeth decay, loosen and fall out, or must be extracted to rid the system of the Pyorrhea poisons generated at their base—poisons which seep into the system and wreck the health. They cause rheumatism, nervous disorders, anaemia and many other ills.

To avoid Pyorrhea, visit your dentist often for teeth and gum inspection, and use Forhan's For the Gums. Forhan's For the Gums will prevent Pyorrhea—or check its progress—if used in time and used consistently. Ordinary dentifrices cannot do this. Forhan's keeps the gums firm and healthy—the teeth white and clean. Start using it today. If gum-shrinkage has already set in, use Forhan's according to directions and consult your dentist immediately for special treatment

Travel to the Orient on American Ships

U. S. Government owned ships, your ships, have brought the wonderland of the East within your reach. In one month you can travel to the Orient, in the Orient—and back. Now Yokohama is only 11 sailing days from Seattle. Kobe, Shanghai, Hong Kong and Manila are but a few days beyond. Twenty-two golden cruising days —with the tang of the salt sea, the bracing air, indolent days on shaded decks, soothing to jangled nerves. Now you can enjoy this surrounded with all the comforts and luxuries of the finest American hotel, with American standards of food, service, and appointments—on American ships.

New American Ships

These swift, new, American vessels—21,000 ton oil-burners—are yours. Owned by the Government, they are operated by the Admiral Line, and offer comfort and speed that mark a new era in trans-Pacific travel. The social rooms are luxuriously appointed. The spacious staterooms are furnished like rooms at home—beds, not berths, all rooms on the outside, private baths in most. Every room has running water, bed-reading lamp, electric fans and radiators. The service—efficient, cheerful, American—persuades commendation.

For accommodations and sailings address your local agent or

Now~only 11 days Across the Pacific

IT is now possible to travel on U. S. Government ships from Seattle to the Orient in just eleven sailing days.

For the first time, American standards of comfort and living have been combined with American *speed* in trans-Pacific travel. Yokahama, Kobe, Shangai, Hong Kong and Manila have been brought a thousand miles nearer. These new, luxurious Government liners—your ships--save five precious days across the Pacific. Yet while the voyage is swift in fact, it is swift in enjoyment, too. The delightful days on shipboard slip by almost before you know it.

On American Ships

Americans are educated to a higher standard of comfort than perhaps any other people. Naturally they prefer American ships. These new Government vessels, manned by American crews, offer the finest of American food, carry the home atmosphere to the very gates of the Orient. They are the logical meeting places for Americans traveling to the Orient.

American Comforts

The spacious staterooms on these ships are furnished with beds, instead of bunks. All rooms are outside. Most have private baths. All are equipped with running water, private toilets, bed reading lamps, electric radiators and fans. Social rooms, luxuriously furnished in faultless taste, are exquisitely beautiful.

The convenience of this passage to the Orient is only equaled by the ease with which you can reach Seattle. Four great railroad terminals connect this port with every section of the country.

Why Americans now go to Europe on American Ships

AMERICANS who have crossed the Atlantic on U. S. Government ships give three reasons for preferring them. They find the comforts they are accustomed to find in the finest American hotels; American food, prepared by chefs who know how to cook for Americans; and American companions.

Hotel Comforts at Sea

On your way to Europe now you may have the comforts and the luxuries of the finest hotels. The accommodations of the S. S. George Washington, flagship of the fleet, are surpassed now here on the seas. The staterooms are large and beautifully decorated. Most have private baths; all have telephones. Elevators carry you from deck to deck. The magnificent social rooms are paneled with rare woods and are furnished with luxurious upholstered furniture that invites relaxation. In cold weather the broad promenade is enclosed with glass.

American Cuisine

Many Americans who have traveled on American ships say the cuisine has set a new standard. It is particularly satisfying to Americans because American dishes are served. The cuisine of the S. S. George Washington has become famous.

American Companions

American ships are the natural places for Americans to meet each other when traveling. If you will scan the passenger lists you will find the names of Americans from all over the 48 states; officers of the Army and Navy, other Government officials, business men whose names are known to every schoolboy, and social leaders from every section.

When you go to Europe, you too will prefer an American ship—a ship of which you own a part. And it will be a source of pride to know that your passage money is helping to build the American Merchant Marine.

Fastest time to Rio and the Centennial Exposition

Are you going? Will you be one of the thousands who will join in the gigantic world celebration of Brazil's 100th year as a Republic?

Every part of the world will be represented there, France, Great Britain, Italy, Belgium and our own United States. They will all have exhibits there and will join in the study of the fast developing business opportunities of South America.

If you are going, write now and let your Government tell you of its swift new ships which have brought South America 5 to 7 days nearer. These new ships—21,000 ton oil-burners—owned by the U. S. Government, sail from New York fortnightly. Rio de Janeiro is now only 11 days from New York. Montevideo and Buenos Aires are but a few days beyond. South America's treasure chest of pleasure and business opportunities is brought almost to your door.

These splendid new ships are operated for the U. S. Government by the Munson Steamship Lines with 50 years of successful steamship experience.

They are among the finest ships afloat, with spacious staterooms equipped with beds, not berths, electric fans, running water, bed reading lamps. Most have private baths.

Next sailings are

S. S. American Legion June 10th

S. S. Pan America June 24th

S. S. Western World July 8th

S. S. Southern Cross July 22nd

Rio de Janeiro is now only 11 days away; Montevideo and Buenos Aires but a few days beyond.

A Luxurious Trip

Today you may visit this treasure chest of barely tapped resources in giant and palatial ocean liners, 21,000 ton oil-burners, U. S. Government owned. Operated by the Munson Steamship Lines they derive the benefits of this organization's 50 years of successful experience.

Not until you have traveled on your ships will you know how delightful an ocean voyage can be. Thousands of Americans are going this year. Special tourist arrangements are made for those who wish to visit the interior and return via the West Coast. You should send the information blank and learn more about the new American ships, the new speed, and the new service.

For accommodations address

Munson Steamship Lines

67 Wall Street *New York City*

Next sailings are:

S.S. Southern Cross	*Mar. 16th*
S.S. Acolus	*Mar. 30th*
S.S. Huron	*Apr. 13th*
S.S. American Legion	*Apr. 27th*

Write for Booklet

Your Government wishes the name of every prospective traveler. If you are considering an ocean voyage anywhere, send the information blank now—no matter when you intend to go. You will receive without cost the Government's booklet of authentic travel information about passports, income tax requirements, etc.; description of U. S. Government ships and literature telling of things to see in foreign lands. You will be under no obligation.

If you yourself cannot take an ocean trip, clip the information blank anyway, and ask some friends who may go to send it in.

The Sunshine Belt

Palatial new U. S. Government ships operated by the Pacific Mail Steamship Company, now sail from San Francisco to The Orient, via Hawaii, Pacific Mail's famous "Sunshine Belt to The Orient." A day's stop is made at Honolulu. Stopovers may be arranged in any Eastern country.

These ships are American-built, oil-burning vessels of 21,167 displacement tons and 535 feet in length. Sister ships, they are alike in every luxurious detail. The spacious staterooms are all outside, equipped with beds (not bunks), running hot and cold water, electric fans, electric radiators, bed reading lamps, private toilets. Most have private baths. Social rooms are exceptionally comfortable and beautiful.

For information in regard to sailings and accommodations, address

Pacific Mail Steamship Company

Established 1848

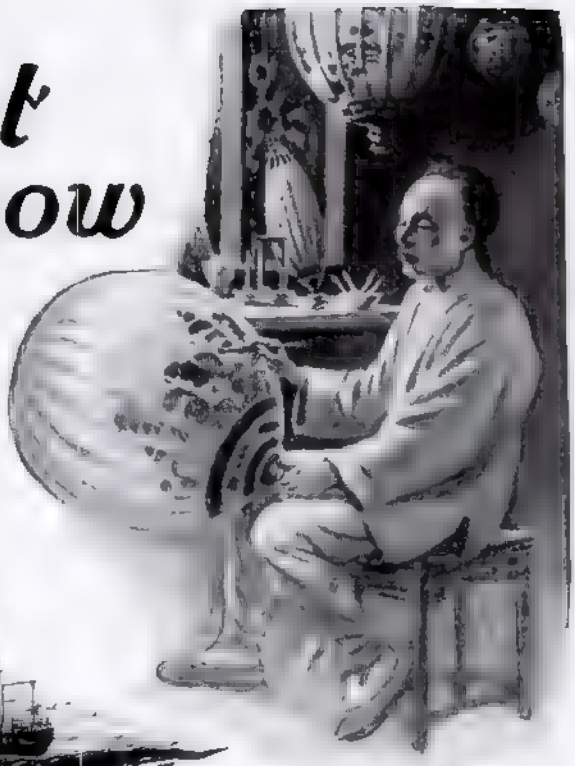
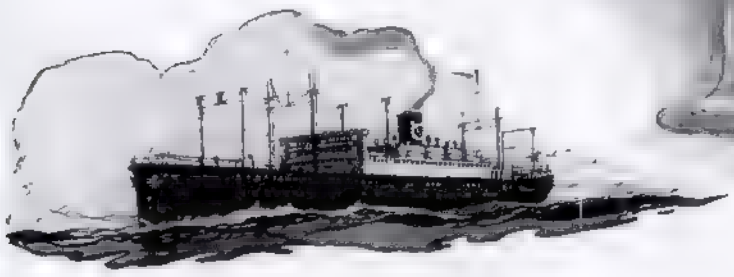
The Orient is nearer now

More comfort and speed on American ships





IF you are planning a trip to The Orient you should know about the new U. S. Government owned ships, which have cut a thousand miles from the journey. They have brought nearer the mysteries, the fascinations, and the sheer beauties of the East. Now in 11 days you can go from Seattle to Yokohama—gateway to wonderful Japan and The Orient.

Luxurious appointments prevail on these great ships — 21,000 ton oil-burners — and they offer all the comforts and facilities of the very best hotel. They are among the finest ships afloat. The service aboard is unexcelled on the seas.

And this year, with the value of the American dollar at its peak, you can *do* more for less than ever before. You should send the information blank below and learn about the opportunity American ships have brought to Americans now.

Christmas morning—and in come the greatest artists!

The surprise and delight of a Victrola for Christmas! Music appropriate to Christmas; music for every day in the year; music so lifelike that the greatest artists select the Victrola as the one instrument to carry their art into the home. Buy a Victrola this Christmas—but be sure it *is* a Victrola. $25 to $1500.

"HIS MASTER'S VOICE"

This trade-mark and the trademark key word Victrola are registered and their use restricted. Look under the lid. Look on the label.

Victor Talking Machine Company, Camden, N. J.

Sousa's Band plays for *you*

and it plays music of your own choosing. The band of the great March King plays as many encores as you wish—such playing as is possible only when Victor records and Victrola instruments are used together. You can hear not only Sousa's Band, but Conway's Band, Pryor's Band, Vessella's Band, U. S. Marine Band, Garde Republicaine Band of France, Band of H. M. Coldstream Guards, Banda De Alabarderos—the greatest bands of every nation and the best music of all the kinds the whole world has to offer.

Victrolas $25 to $1500. New Victor Records demonstrated at all dealers in Victor products on the 1st of each month.

"My Victor Records shall be my biography"

That was Caruso's characteristic remark when he was once approached regarding his biography.

The one hundred and seventy-eight Victor Records by Caruso, and many records yet to be issued, truly constitute the best autobiography of the world's greatest singer; a unique autobiography which has never been equalled for vividness; an autobiography which is itself alive and which will continue to delight all the succeeding generations.

The Caruso records include fifty-six operatic arias, twenty-three concert ballads, sixteen Neapolitan songs, fifteen love lyrics, twelve sacred numbers, five patriotic selections, and fifty-one concerted numbers, all of which are listed in the Victor Record Catalog. Any dealer in Victor products will gladly give you a copy and play any numbers for you.

Announcement Extraordinary

The new MAJESTIC
(56,000 tons)
largest ship in the world

The new HOMERIC
(35,000 tons)
largest twin-screw steamer in the world

The OLYMPIC
(46,500 tons)
known internationally for her magnificence

THE White Star Line announces that beginning in the spring of 1922 these great liners - three of the world's largest ships—will maintain a weekly schedule of sailings from New York to Cherbourg and Southampton.

Teamed together on the Cherbourg-Southampton route, the *Majestic, Homeric* and *Olympic* provide *regular* passenger service with a class of accommodations heretofore obtainable only at intervals, and to a limited proportion of European visitors.

For individual grandeur, power and luxurious appointments, each ship marks the high tide of achievement in providing comfort at sea. The experience and finished skill of White Star service which have created the reputation of a long line of famous ships, culminating in the prestige of the *Olympic*, maintain last word standards aboard these mighty vessels.

The spring schedule has been arranged so as to provide full convenience of service for those experienced travelers who plan their trips in time for the springtime gayety and beauty of England and the Continent.

West Indies Cruises

To the Brilliant and Sunny Playground of the Western World, On Board the Splendid White Star Liner MEGANTIC

The West Indies, Panama Canal and South America: Shake off your winter coat, shake off your winter mind and go down into these lands where sunshine, blue seas and tropic flowers call to the traveler. Nowadays, the West Indies lure by their picturesque and charming atmosphere, their quaint customs, their radiant beauty. The Panama Canal, Mecca of all good Americans, one of the most interesting places to visit on the face of the globe. South America, vitally interesting, foreign, beautiful, seen on these trips through carefully planned visits to La Guayra, port of Caracas, and to the ancient mountain capital of golden Venezuela.

Go to these geographically near but romantically distant lands on board the White Star Liner *Megantic*. As on a private yacht, these cruises are conducted with the utmost luxury, perfection of detail in service, beautiful and restful trips ashore and with every health-giving advantage. The Itinerary: From New York to Cuba, Jamaica, Panama, Venezuela, Trinidad, Barbados, Martinique, St Thomas, Porto Rico, Nassau, and Bermuda. Duration of cruise approximately 28 days. No passports required. Rates, $300 and upwards.

First Cruise, January 17. Second Cruise, February 18. Third Cruise, March 20. White Star service, known the world over as the utmost in ocean comfort

A $10 Foto-Distance Meter

makes camera focus certain

NOTHING is more difficult than estimating distance by guess work—nothing more disappointing than a good picture guessed wrong. Out-of-focus pictures are no longer possible if you use this prism range finder for focusing.

Every focusing scale camera needs a Foto-Distance Meter—the first and only true optical instrument with prisms at this price. Test your scale, use this Meter, and focusing trouble is forever over. An ideal gift. Booklet on request.

70 years of scientific lens-making

The Bausch & Lomb TESSAR LENS *leads all anastigmats*

FOR years, Tessar has been acknowledged as the finest among anastigmat lenses. One of the first to be made in America, Tessar has kept pace with optical progress and has consistently been the leader.

Bausch & Lomb's seventy years of scientific lens-making is the reason for the success of this finest anastigmat. In the great optical shops of Bausch & Lomb the glass is melted and moulded, the lenses are ground and polished and so on to the finished product. Entirely American-made, the Bausch & Lomb Tessar Lens stands supreme.

The Tessar is made for your camera. Write for the book, "What Lens Shall I Buy?"

TREMENDOUS MILEAGE

The Story Owners Tell

Owners cling to their Willys-Knight car for years with an enthusiasm that is almost affection. They prefer it to any other car at any price. They attain tremendous mileage with great economy, unhampered by motor adjustments.

A Buffalo manufacturer writes: "After some 75,000 miles of running, the engine and body are apparently in as good condition as when the car was bought."

A garage mechanic from Walnut, Illinois: "I have driven my Willys-Knight over one hundred thousand miles, and will say that I have certainly had good service."

A jeweler from Fort Dodge, Iowa: "The engine has not been touched in four seasons. Oil and water consumption is almost negligible."

The Willys-Knight Sleeve-Valve Motor eliminates cams, springs, and tappets. Fewer parts and simpler operation give freedom from adjustments. It puts an end to valve troubles. It *stays* quiet and *is always ready for service.*

In every detail the Willys-Knight is a car of distinction—in appearance, comfort, economy, and long life. It brings luxurious motoring within nearly everybody's reach.

$1375

f. o. b. Toledo

A new, delightful motoring experience awaits thousands who are now able to own and enjoy the brilliant flexibility and luxury which has long made the Willys-Knight car a favorite with people of greater means.

YOU now can own a car whose life is measured by scores and even hundreds of thousands of miles, with coach and chassis built extra strong and extra quiet to avoid even those minor noises which the quiet Willys-Knight Motor would accentuate and make intolerable.

You can free yourself from the annoyance of motor repairs and adjustments; from valve grinding and from noise.

You can enjoy the surprising economy which only a Willys-Knight owner knows, for the Willys-Knight car combines its peculiarly low upkeep economies with the largest known gasoline mileage of any car of its power and weight.
